S. F. MARKET REPORT

Weekly Market Review.

DOMESTIC PRODUCE, ETC..

SAN FRANCISCO, Feb. 6, 1889.

Outside of grain, farm products have ruled weaker the past week under free receipts. Barley has been fairly active at strong prices. Wheat fluctuated considerably, but at advancing prices under good business. The market was influenced by higher prices abroad. The following is to-day's cable-gram:

LIVERPOOL, Feb. 6.—Wheat—Dull. California spot lots, 75 to 75 1/2 off coast, 38s; just shipped, 38s 3d; nearly due, 38s; cargoes off coast and on passage, quiet but steady; Mark Lane wheat, steady; French country markets, dull; weather in England, unsettled.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Feb.	Mar.	Apr.	May	June	July
Thursday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Friday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Saturday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Monday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2
Tuesday	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2	75 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	O. C.	P. S.	N. D.	Market.
Thursday	37-3d	37-9d	37-9d	Inactive.
Friday	37-3d	37-9d	37-9d	Slow.
Saturday	37-3d	37-9d	37-9d	Slow.
Monday	37-3d	37-9d	37-9d	Former.
Tuesday	37-3d	37-9d	37-9d	Quiet.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Day	Feb.	Mar.	Apr.	May
Thursday	94 1/2	94 1/2	94 1/2	94 1/2
Friday	94 1/2	94 1/2	94 1/2	94 1/2
Saturday	94 1/2	94 1/2	94 1/2	94 1/2
Monday	94 1/2	94 1/2	94 1/2	94 1/2
Tuesday	94 1/2	94 1/2	94 1/2	94 1/2

The closing prices for wheat have been as follows, at Chicago:

Day	Feb.	Mar.	July
Thursday	94 1/2	94 1/2	94 1/2
Friday	94 1/2	94 1/2	94 1/2
Saturday	94 1/2	94 1/2	94 1/2
Monday	94 1/2	94 1/2	94 1/2
Tuesday	94 1/2	94 1/2	94 1/2

NEW YORK, Feb. 6.—Wheat—96 1/2¢ for cash, 96 1/2¢ for Feb., 98 1/2¢ for March, 97 1/2¢ for May and 89 1/2¢ for July. Oats—25¢ for Feb.

The Foreign Grain Review.

LONDON, February 4.—The *Mark Lane Express* in its weekly review of the British grain trade says: English wheat is depressed. Prices show an average decline of 1s. The sales of English wheat the past week were 52,790 quarters at 29s 9d, against 60,744 quarters at 30s 8d during the corresponding week last year. American flour made of 1888 wheat sells at a fair price. Foreign wheat decreased 1s, partly owing to weakness in English wheat and partly to the thaw that occurred at Odessa, enabling freight steamers to get away. Barley is 3d lower. Corn is firm. Linseed declined 6d. At to-day's market foreign wheat was steady; flour was weak; barley and oats firmer.

Cables of February 5 report as follows: French country markets, rather worse. English country markets, steady. Wheat in Paris, steady. Flour in Paris, steady. English and foreign wheat, steady. English and American flour, steady. Weather in England, frosty. One arrival of wheat cargoes off coast, two sales and nine awaiting orders. Wheat and flour on passage to United Kingdom, 2,328,000 qrs; wheat on passage to Continent, 373,000 qrs; corn on passage to United Kingdom, 328,000 qrs; corn on passage to Continent, 176,000 qrs. Weekly imports to United Kingdom—flour, 172,000 bbls; wheat, 330,000 qrs; corn, 150,000 qrs.

Eastern Wool Market.

NEW YORK, Feb. 1.—Wool is quiet but steady in most American markets. The London sales have opened in a way to encourage holders on this side of the water. Fair competition is reported, with a liberal attendance of domestic and foreign buyers, spirited bidding and prices on a level with those at the close of the last series. This state of things is believed to assure the continuance of comparatively firm prices in this country until the appearance of the new clip. There is really no change in the situation; holders are confident and are disinclined to grant concessions, while buyers are not investing beyond their near-by requirements. No great amount of really choice wool is offered.

At Philadelphia the wool trade is generally dull. The market for fleeces shows less firmness. Holders have modified their extreme views in most cases, and in exceptional cases have made slight concessions on fine wools, but there is a general unwillingness to shade prices to the extent that would be necessary to induce buyers to operate largely in advance of wants. Manufacturers would probably buy pretty freely at concessions of 1¢ to 2¢ from recent quotations, but dealers' stocks are not large, and there is no pressure to realize at this cost. Territory wools are steady and in fair demand.

BOSTON, Feb. 1.—There has been more active demand for wool this week, and transactions of all kinds amount to 3,651,300 lbs. A large part of these sales has been of foreign carpet wools, but the amount of domestic wool has also been comparatively large. There is no material change to notice in prices, which are held firm, and the confidence of dealers in the value of their wool is unimpaired.

Miscellaneous.

NEW YORK, Feb. 3.—Great Britain is still independent of our wheat so far as this market is concerned and the decline does not produce more than a light continental call.

Hops—Crisper prices prevail. State, 22c. There is good local demand. Exports for the week, 1093 bales.

Mustard seed is nominal at 3 1/2¢ to 3 3/4¢; yellow, 4 1/2¢.

California oranges here do not find a ready mar-

ket. With the cost of shipment, Pacifics can hardly compete with even an ordinarily abundant Florida crop.

Some lots of Easter Beurre pears have held up handsomely.

Limes are scarce and firm at \$2.90. Strained honey is in demand, at 7 1/2¢ to 8¢ wholesale. Comb is now held at 14¢. There is an irregular feeling in dried fruits.

Local Markets.

The following tables give the highest and lowest prices paid on Call during the past week:

	S. S.	B. S.	B. '89.	"S. '89.	"S. '89.
Thursday	142 1/2	142 1/2	140 1/2	138 1/2	135 1/2
Friday	141 1/2	141 1/2	140 1/2	138 1/2	135 1/2
Saturday	141 1/2	141 1/2	140 1/2	138 1/2	135 1/2
Monday	141 1/2	141 1/2	140 1/2	138 1/2	135 1/2
Tuesday	141 1/2	141 1/2	140 1/2	138 1/2	135 1/2

—New. 10d.

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday	84 1/2	86 1/2	95 1/2
Friday	84 1/2	86 1/2	95 1/2
Saturday	84 1/2	86 1/2	95 1/2
Monday	84 1/2	86 1/2	95 1/2
Tuesday	84 1/2	86 1/2	95 1/2

BAGS—The market is weak for spot, and even for future delivery concessions are said to be obtainable. Calcutta on spot is quoted at 7 1/2¢, for June-July delivery 7 1/2¢ to 7 3/4¢.

BARLEY—The market for sample parcels has been strengthening the past week. On Call, options have held strong with light trading reported. At the low prices ruling there does not appear to be much disposition to short. The reported sales made on to-day's Call are as follows:

Morning Session: Buyer season—100 tons, 86¢; 100, 85 1/2¢; 100, 85 1/2¢. Afternoon Session: Buyer season—100 tons, 86 1/2¢; 100, 86 1/2¢.

BUTTER—The market has been gradually settling throughout the week, with a weak tone at the close. Heavy receipts and a strong selling pressure are the main factors in promoting the low prices.

CHEESE—Prices have shaded off under free receipts and only a fair call. Buyers do not appear disposed to anticipate their wants.

EGGS—A more demoralized market has seldom occurred. Although the consumption is increased by low prices, yet the heavy receipts are against values recovering.

FLOUR—The market is quiet and weak.

WHEAT—The market the past week for sample parcels gradually strengthened under foreign advices. Trading at the advance was light, owing to holders advanced views. On Call, trading was very active with sharp and rapid fluctuations. The following are the reported sales made on to-day's Call:

Morning Session: Buyer 1889—500 tons, \$1.48; 700, \$1.47 1/2; 1000, \$1.47 1/2. Buyer season—500 tons, \$1.44 1/2; 1000, \$1.44 1/2; 200, \$1.44 1/2. Afternoon Session: Buyer 1889—1400 tons, \$1.47 1/2; 300, \$1.47 1/2. Buyer season—400 tons, \$1.44 1/2.

[COMMUNICATED.]

Market Information.

Cereals.

From the *Mark Lane Express* of Jan. 14th the following review of the English foreign wheat trade is taken: The yield of the British wheat crop of 1888 being on the most favorable estimate 28 bushels only, against 32 in 1887, it is somewhat surprising to find that purchases of foreign wheat in 1888 were only about three per cent increased in 1887. It has, however, to be remembered that up to June the good crop of 1887 was keeping the agricultural exchanges unusually well supplied with English corn. Another matter of surprise is the complete absorption of the big consignments of wheat from Russia. So far from overloading the British ports, they have been so fully called for that it is evident their timely arrival has alone stood between the United Kingdom and a period of scarcity. The Russian shipments have, indeed, been remarkable. In 1886 they were 3,710,000 cwt. In 1887 they rose to 5,522,773 cwt. The expectations of 1888 would normally have stood at about this figure, but 21,368,793 cwt were actually received. Nor was this the full extent of the Russian export trade, for the large exports of Polish wheat received through the Baltic ports of Germany must, politically and geographically, be credited to the Russian Empire, though it is through them that Germany appears in the Government tables as sending us 1,318,053 cwt of wheat in 1886, 1,551,738 cwt in 1887, and 3,264,815 cwt in 1888. A third country, which cannot be separated altogether from Russia, is Roumania, and here, again, we find a great increase in the wheat exports, which in 1886 were only 290,248 cwt, and in 1887, 585,353 cwt, but which in 1888 rose to 1,419,079. Putting these three regions together under the heading of Eastern Europe, we shall have for 1888 exports: Russia, 21,368,793 cwt; Poland, 3,264,815 cwt; Roumania, 1,419,079 cwt; total Eastern Europe, 26,052,687 cwt. This formidable quantity of 6,000,000 qrs has been launched upon British markets, wherein of late years a third of the quantity had alone been expected. That these large supplies did not cause a profound depression in wheat values is to be found in the strikingly diminished exports of the United States. In 1886 24,500,000 cwt were shipped, and in 1887 over 30,000,000 cwt. In 1888 only 14,647,195 cwt were shipped, a falling off of over 3,500,000 qrs. Canada at the same time decreased her shipments from 4,000,000 cwt to 1,000,000, while Indian trade, despite a good harvest in the spring of 1888, showed a curious want of vigor. 1886, 11,028,665 cwt shipped; 1887, 8,509,095 cwt; 1888, 8,188,608 cwt. The growth of trade on the eastern seaboard of South America is marked, but Chili ships within well-defined limits every year. Anything below 1,000,000 or above 2,000,000 cwt is quite exceptional. From Australia, the shipments of wheat in 1888 were larger than in 1886 and 1887 together, but in 1889 little or no Australian wheat is likely to be shipped. The total wheat imports of the past three years have been: 1886, 47,404,344 cwt; 1887, 55,784,685 cwt; 1888, 57,224,934 cwt. Of flour, our imports—to the great relief of

English millers—have ceased to grow. The figures of the past three years witness to this: 1886, 14,730,232 cwt; 1887, 18,056,545 cwt; 1888, 16,012,773 cwt.

The local wheat market has been quite strong throughout the past week, due chiefly to the dry weather, although the market is influenced to some extent by foreign advices. The demand from exporters, millers, and also from Call Board operators has been and continues quite active, causing the stronger tone to rule. Sales the past week are reported to aggregate more than in any one week since the new year set in. Holders are not disposed to let go even at the advanced quotations. Operators in this city think that with a good soaking rain soon, sellers will be in the market, and for that reason they are now only disposed to purchase for immediate requirements, preferring to chance the future rather than to anticipate their wants at the advance now current. There is no denying but the "bull" feeling is gaining in this city, for there is less disposition to short the market on Call for futures.

Advices from the interior are confirmatory of a growing uneasiness, owing to the absence of rains. If the winter of 1887-88 had been a wet winter, the light rainfall so far this season would not have had any effect, for the ground would have had sufficient moisture to withstand a light rainfall, but the winter of 1887-88, as was also the winter of 1886-87, being not quite an average, the ground this year is poorly prepared to withstand the bad effect of a light fall of rain. Several sections in this State already feel the absence of rain, and unless it visits these particular locations soon, there can be no doubt but many fields of grain, heretofore promising good crops, will be entirely ruined.

Barley, as indicated last week, has ruled strong, with a slightly higher range of quotations reported for all grades, with a strong tone at the close. The particular influence on the market is several weeks of no rainfall, when showers, if nothing more, would do incalculable good in sections where seeding has been done. Large operators and dealers do not anticipate their wants to any great extent. Although the feeling with them is more bullish, yet they are disposed to await the immediate future as regards the weather before buying largely. Holders have either withdrawn from the market or are asking an advance.

The large stock here and continued free receipts keep oats in buyers' favor, although the undertone appears to be gaining strength.

Corn is without essential change. Any improvement in prices is followed by freer receipts which let prices off again. This action of the market makes buyers offish.

In rye and buckwheat there is nothing new to report; the demand is slow.

Fruit.

Choice apples are getting scarce, causing a higher range of values to be paid. Off apples are still slow, but owing to the scarcity of choice they have stiffened slightly.

Dried fruits are still in the dumps, and very hard to move. There is considerable in stock, and, as buyers are not in the market, to sell, a lower range of values must be accepted than is quoted. This makes all quotations altogether nominal and entirely unreliable.

Choice London layers and loose Muscatel raisins are getting scarce, and in consequence command full prices; but the poorer grades are hard to place; even low prices do not tempt buyers. Loose raisins in bags have ready sale at from 4 to 4 1/2¢ a pound.

Oranges are moving more freely, with choice, good-conditioned given the preference. Oregon, Washington Territory and British Columbia are taking more, probably owing to the lessened supply of apples and also to milder weather. There are still large quantities of poor oranges on the market, for which, to place, almost nothing has to be accepted. The heavy supplies of Florida put on the Eastern markets are against our oranges being marketed there at good prices, although fair prices are reported to be obtainable.

California lemons and limes are without essential change. The demand appears to be improving. Mexican limes are still scarce.

Live-Stock.

The market for bullocks is still depressed—the supply being in excess of the demand. The quality averages better than at this time last year. The dry weather is against the market, owing to many cattle-men preferring to market now at low prices than to change feed. Mutton sheep are weaker—there is more disposition to let go. The price depends to some extent on the length of the wool; those just sheared or having short wool fetch less money, all else bring equal. Lambs and calves are still wanted. Hogs continue scarce. Those suitable for the block running from 150 to 225 lbs fetch the most money. Good dairy cows are still inquired for. In horses there is nothing new to report. Matched teams fetch from \$700 to \$1200 a span, the price being regulated by color, carriage, etc. Medium to large work horses find ready buyers, but small move slowly. General utility horses are inquired for, as are single-footers.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 6 1/2¢ to 6 3/4¢; dressed, 9¢ to 9 1/2¢; soft, 5 1/2¢ to 5 3/4¢; dressed, 8 1/2¢ to 8 3/4¢. Stock hogs, 4¢ to 5¢.

BEEF—Stall fed, 7¢ to 8¢; grass fed, extra 6 1/2¢ to 6 3/4¢; first quality, 6¢ to 6 1/2¢; second quality 4 1/2¢ to 5 1/2¢; third quality, 3 1/2¢ to 4 1/2¢.

VEAL—Small, 8¢ to 9¢; large, 7¢ to 8 1/2¢.

MUTTON—Wethers, 6 1/2¢ to 7 1/2¢; ewes, 5 1/2¢ to 6 1/2¢; lamb, spring, 10¢ to 15¢.

Vegetables.

There is a freer movement in cabbages, but owing to liberal supplies prices do not appreciate. Whitland & Frederickson received yesterday the first consignment of their this season's colossal asparagus from Boulden island. This asparagus fetches very high prices, owing to its superior qualities. It is grown in the same way it is grown in the "old country."

The southern part of the State is increasing its supply of fresh vegetables, causing some shading in prices. With the weather in the bay counties moderating, trucksters are encouraged in expecting to be

able to market garden truck at an earlier date than in 1888. As far as the writer is able to learn, there has been more attention given to gardening this season than ever before, and in consequence when receipts set in heavily low ranges of values are looked for in nearly all lines.

Heavy receipts of potatoes continue in order. They come chiefly from Oregon, causing buyers to hesitate except at low prices. Many consignees to save expenses cleaned up the wharf at a slight concession. The market for choice good keepers has a steady, firm tone at the close, but defective parcels are slow and hard to place. New potatoes are coming in more freely, but the quality is still irregular.

Onions under free supplies weakened some the past week. The demand is chiefly for well-selected and good keepers.

In root vegetables, trading is still only fair.

Feedstuff.

Choice grades of hay are in light supply, causing an advance to be bid. Even at the advance, holders are offish, owing to continued dry weather. Coarser and poorer hay are in fair supply, but buyers do not take kindly to these grades except at low prices. The consumption, it is reported, is increasing.

The market for ground feed is strengthening, under a slight improvement in the demand and better prices for grain.

Miscellaneous.

Wool continues dull, owing to limited stocks and sellers' views being above buyers. The market abroad is very strong, above the New York parity, which may keep ours up, although Eastern manufacturers are reported to be combined to fight against high range of values.

In hops the market continues lifeless. The supply on this coast is very light.

The only strength shown the past week in poultry was in fryers, broilers and young roasters. Receipts of both live and dressed overland continue in order. Turkeys are weak.

Extracted honey is in request for European account; but comb is still heavy. Beeswax is moving off more freely.

Several vessels were taken the past week for wheat loading. The rates paid were slightly lower than the last reported charter.

Eastern advices report a freer movement in beans, but as yet our market is reported to be heavy.

Nuts are slow, necessitating some concessions to place consignments.

From the *Commercial News* of Feb. 6th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	212,901	209,332
On the way to neighboring ports	38,736	77,063
In port, disengaged	34,711	76,819
In port, engaged for wheat	28,649	41,306
Totals	314,997	404,520

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to Feb. 6th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	9,133,684	5,655,301
Flour, bbls.	440,612	455,360
Barley, cts.	1,175,709	423,959

Fruits and Vegetables.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

FORESTRY.

The Acorn and the Oak.

[Read before the California Academy of Sciences, Feb. 4, 1889, by THEODORE H. HITTELL.]

I hold in my hand an acorn. It is the nut of that species of the oak which is familiar to everybody throughout California, and commonly called the Californian White Oak. To science it is known sometimes as *Quercus Hindsii*, sometimes as *Quercus Longiglana*, and sometimes, and most generally, as *Quercus Lobata*.

This acorn, as will be perceived, is elongated, conical and rather sharply pointed. It is about an inch and a half long and half an inch in its thickest transverse diameter. Such seems to be the usual size and shape of the nut; though in some cases, owing to peculiar conditions, it is found as much as two and a quarter inches in length, and a little thicker, or a little thinner, than half an inch crosswise, as it may happen.

In solid measurement, it may be estimated, with sufficient precision for present purposes, to be equal to two cubes of half an inch each—in other words, to one-quarter of a cubic square inch.

The oak which produces it is common throughout nearly the whole State of California, on the plains and in the foothills, and forms one of the most attractive features in the landscapes of our beautiful valleys. It is a majestic tree in appearance, sometimes with a trunk as much as twenty feet in circumference, a height for the topmost branches of a hundred feet, and a spread of limbs on each side of sixty feet.

In some cases under extremely favorable circumstances, the outer branches hang down with an almost uniform size of ten, twenty, thirty or more feet, the lower ones sometimes reaching the ground. Trees with such depending branches frequently receive in popular phrase the name of hanging or weeping oaks; but they do not essentially differ from the other white-oaks of the State.

In all, there appears to be a tendency in the ends of the long branches to depend; and in the cases referred to this tendency is so greatly developed that the small outer limbs seem to hang like leafy vines, and to sway backward and forward in graceful sweeps with every breath of the summer zephyrus.

Taking one of the best specimens of this magnificent tree, and calculating the solid contents of its wood and bark, and it will be found to contain about eighteen cords, or, in rough numbers, about four million (4,000,000) cubic inches. This makes a mass sixteen million (16,000,000) times larger than the acorn. There can be no doubt that every oak tree, or nearly every tree, that is found in the State grew from an acorn; but, on the supposition that some trees have grown up from the roots of other trees produced from acorns, then the above-mentioned comparatively immense mass of wood and bark, considered as getting its start from a single acorn, must be prodigiously increased.

If the acorn be opened by cutting through the hard outer shell and examined, it will be found to consist of two equal or nearly equal halves, between which at the pointed end is a body, looking something like a very small, smooth, whitish-colored worm, usually called the germ. It is this germ that grows when the acorn is placed under the proper conditions of heat and moisture. The other parts, the two halves before mentioned, are merely the food stored up for the support of the germ in its earliest stages of growth, and the hard outer shell is merely the armor, which protects the germ and its store of infant food until such time as it may find proper conditions of heat and moisture for its growth. Such being the case, it is evident that the size of the great tree, before spoken of as containing a mass sixteen million times larger than the acorn, must, if compared with the size of the little germ, be increased many thousands of times. And again, if the germ be microscopically examined it will be found that its life-bearing part, the part which grows or originates growth, is a mere cell, so small as to be invisible to the naked eye. If an attempt should be made to compare the size of the full-grown tree with the size of this cell, from which it starts when it commences its growth, the calculation would lead to almost endless files of figures like the black-board filling quantities that are used in astronomical determinations.

It was at one time a question whether the acorn originally came from the oak or the oak from the acorn; in other words, which was first created. According to the first chapter of Genesis, "the earth brought forth grass, and herb-yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind." It is difficult to understand exactly what was meant by this account of creation. Until comparatively recent times, the general understanding seems to have been that the tree full grown, with its fruit and seed fully ripened, was at once produced by creative act. But the statement that the earth "brought forth" the grass and the herb and the tree yielding fruit, does not affirm that it brought them forth in the beginning in any different manner from that in which it brings them forth now.

How is the oak brought forth now? Unless the acorn is subjected to the proper conditions of heat and moisture, it remains an acorn.

It is difficult, perhaps impossible, to say how long it could be kept an acorn capable of germinating. Doubtless a very long time. It

is said that some of the wheat buried in the pyramids of Egypt three thousand years ago, will still germinate and grow. If this statement be correct, there is no good reason why an acorn, capable of germinating, might not be kept for nearly as lengthy a period. As long as it can be and is so kept, it is obvious that it contains within itself the principle of life. It is in all essential respects a living thing, though not in the sense in which the term "living" is ordinarily understood. It has no movement and no growth or change of substance, any more than so much other dead or inert matter. But for all this, it still lives, is still a living thing, or, if the expression be preferred, a living being. When such an acorn is subjected to the proper conditions of heat and moisture, the little germ begins to move and expand. The principle of life within it, which has hitherto remained dormant, becomes active. The process consists in the first place of an appropriation by the germ of the matter which is stored up in the acorn itself. Very soon the germ, as it moves and expands, bursts the shell of the acorn; and while one end springs upward toward the light and air, the other end sinks downward into the ground. In a comparatively short time all the food-matter, which is stored up in the acorn, is appropriated. By this time, however, the plant has begun to draw the food necessary to its growth from the air by means of its leaves and stems, and from the ground by means of its roots; and it goes on thus drawing and appropriating food from the air and the ground until in the course of time, by continued appropriations and accessions, it becomes the magnificent tree which so often excites the admiration of the traveler in our scenes of quiet sylvan beauty.

The fundamental principle in the growth of the plant, after it has taken its start, is the appropriation and incorporation into its own substance of various inorganic substances, which it finds distributed at large in the air and earth. The chief of these substances, or, in other words, the main food of the plant, is carbon. This carbon is eliminated through chemical processes from the carbonic acid contained in the atmosphere by means of the leaves and stems, all and every square inch of which is more or less exclusively devoted to this purpose. Such being the case, it is obvious that all the outside of a plant is, so to speak, its stomach, or, in other words, the organ or series of organs by which it assimilates its food. In this respect it, of course, differs from an animal, the fundamental idea of whose organization is an inside sack or stomach, comparatively small in size and being the only part of the animal body adapted to the reception and assimilation of food. Broadly stated, therefore, one of the great differences between the animal and the plant, in addition to those more obvious characteristics which distinguish the separate kingdoms of nature to which they respectively belong, is that while the animal has a stomach resembling a sack with the food on its inside, the plant has a stomach like a sack turned inside out with its food on the outside.

Another of the great differences of the same general character between the animal and the plant, and arising chiefly from the before-mentioned differences of their organs of nutrition, is that while the food of the animal is mostly either in a solid or fluid form and consists almost exclusively of organic matter, the food of the plant, with the exception of some comparatively small quantities of water and earthy matter taken up by the roots, is just as exclusively of inorganic matter and just as entirely of aeriform or gaseous nature. Whatever and however important a part the water and earthy matter extracted by the roots from the ground may play in the growth and development of the plant, there can be no question that the main, and, as before stated, almost exclusive, source of its food, is the carbonic acid gas of the atmosphere. This is produced and thrown out into the air by combustion of various kinds, and not least by the combustion upon which animal life depends, and is wafted and distributed over the earth by the winds. Thus the currents of the air are the food-carriers of the forests and fields as the currents of the sea are the food-carriers of the continent-forming shell banks and coral reefs.

In the days of Job—who, by the way, was one of the first and best of scientific observers—it was supposed that wind alone as a food-supplier could afford but a luteal entertainment.

It will be recollected that, as an illustration of the very some of vanity and emptiness, the patriarch was substantially asked whether he could fill his belly with the east wind. The answer, had there been a direct one, would probably have been, No. But on the other hand Job might just as well and just as truly have answered that the grasses and the herbs and the trees, that yielded him and his flocks food, filled their bellies with the east wind and found it very solid and substantial pabulum.

To consider for a moment how the southeast trades suck up the waters of the South Pacific; how they carry them over one-half the globe and pour them with open-handed liberality upon our Californian orchards and fields, opening their pores and enabling them to transform and assimilate the substances contained in the air into fruit and grain, and how they thus yearly crowd our markets and pack our warehouses and load our ships, we may well say: "Perhaps not directly, but indirectly, Yes; we are all filling our bellies with the east wind."

The facts that the atmosphere is the food-magazine and that the winds are the food-

carriers of the vegetable kingdom, and the fact that the food of plants is not only inorganic, but gaseous in its nature, lead naturally to the question, what change takes place when the food contained in the atmosphere is converted into the substance of the plant? or, to come back to our special subject of investigation, how is the great oak produced out of the little acorn? As the process of growth goes on from the first movement of the germ, there is plainly a continual accession of carbon absorbed by the leaves from the air and transformed from inorganic into organic matter, or, if the expression be preferred, from dead matter into live matter. What quality is communicated to the carbon, that is incorporated into the growing oak, which was not contained in the carbon that was circulating over land and sea on the wings of the wind?

If this quality be life, and if this life be something which was not inherent in the inorganic matter, then it follows that every particle of living matter contains something which did not exist in it before, and which could not exist unless it were newly created. If this thing called life is then a newly created thing, it must be created with every change of matter from the dead inorganic state to the living organic state. Such a supposition would of course necessitate the assumption not only of an infinite number of little creations going on at the same time, but also of an infinite series of such little creations succeeding one another as long as living beings should grow and should continue to grow. Every leaf and every infinitesimal cell of every leaf of the oak is a laboratory where this change is going on; and the whole oak, as a living integer, is but an aggregation of an infinity of these little changes, each one of which, separately, is so small as to be invisible.

In contemplating the growth of the oak from the acorn, therefore, and comparing the great mass of living matter contained in the eighteen cords of which the full-grown tree consists with the microscopic germ from which it originates, we are obliged—either to consider each increment of growth as a new creation caused by a separate act of creative power, or to attribute it merely to a new arrangement of matter arising necessarily from the inherent nature of the matter entering into the new growth as subjected to the influences surrounding it. When a loadstone is brought close to iron filings, the latter move and arrange themselves in definite lines. There are in this case movements, and movements in an invariable direction, in accordance with the position of the magnet and the inherent nature of the particles of iron. But the movements of these particles are not regarded as out of the natural order of things or involving the exercise of any extraordinary or unusual powers. Again, when a solution of salt reaches a certain density, a certain number of the salt molecules shoot out in invariably definite directions and form those magnificent aggregations called crystals. Here again there are movements and movements in an invariable direction inherent in the nature and constitution of the solution itself. The formation of the crystal seems in one sense to be the creation of a new thing; but chemistry teaches us that there is nothing in the crystal that was not in the solution, and that the only change which has taken place is merely a change in the position of the molecules of the salt, they being in the one case held suspended in the solution and in the other case aggregated according to definite laws of polarity in the solidified mass. Wonderful as the formation of the crystal is, the powers which produce it are inherent in the nature of the substance or substances which build it up. But no one regards these powers as extraordinary. On the contrary, they are supposed to be as natural as the law of gravitation or any other of the conditions under which all matter exists.

If, now, we contemplate a growing oak leaf, and carefully examine the composition of the new structure, we will find that it has merely added to its size by increments of new matter taken from the surrounding medium. It has managed like the loadstone to draw from the atmosphere the particles of matter suitable to its growth, and, like the crystal, it has arranged them in definite positions. The formation of the leaf is a more complicated process than the formation of the crystal, but there does not seem to be any good reason, merely on account of its greater complication, to suppose that the one is any less a natural process or any more requires the exercise of creative power than the other.

There is nothing in the completed leaf that was not in the material environment, any more than there is anything in the crystal that was not in the solution.

In each case, matter of certain kinds was aggregated under certain conditions; and, so aggregated, the live leaf was the natural result in the one case just as the definitely angled crystal was in the other.

Mention has already been made of the acorn as capable of existing for an indefinite period simply as an acorn, with the principle of life contained within it in a dormant state. If such an acorn were never to sprout, it could not in the ordinary sense be said ever to live as an independent being. But if at any time, be the period a year or a century or thirty centuries, it should be subjected to the proper natural conditions of heat and moisture, it would immediately assume the movements and qualities which are termed life.

If what is thus called life is the natural result, and nothing more than the natural result, of the influence of the heat and moisture upon

the dormant and otherwise dead matter of the acorn, why may not the combined heat and moisture be called the cause of the resulting life? If they do not create the life resulting from the subjection of such an acorn to their power, when can such life be said to be created?

Is it when the flower, from which the germ starts, is fructified, or when the acorn, fully developed and increased within its protective armor, drops from the parent tree? Or does creative power patiently wait until by chance the accidents of acorn, heat and moisture all combine together, and then interpose its creative fiat?

Without being able, perhaps, to answer a great many questions which may and doubtless will arise in attempting to pursue speculations or formulate even approximately clear ideas on these interesting and important subjects, it seems plain that the oak grows from the acorn by virtue of natural laws inherent in the substances of which the oak and the acorn are respectively composed; and that in the uncounted and uncountable successions of generations since the first acorn sprouted and the first oak reared its limbs toward the heavens, there has been no new creation or exercise of creative power of any kind.

It is not proposed at present to enter upon the question of what may be called the original creation of the primeval germs. But if the oak be produced by virtue of forces inherent in matter, it seems to follow that there must have been a primeval germ of some kind or other. If so, whether such germ were brought forth by a divine act of creation or were merely the natural and necessary result of a certain aggregation of matter, however brought about, it must have preceded both the acorn and the oak. If such were the case, the question before mentioned, as to whether the acorn originally came from the oak or the oak from the acorn, does not present any very great difficulty. The answer clearly is, that neither originally came from the other, but that both were evolved *pari passu*, side by side, by gradual development from earlier forms, commencing with the primeval germ.

When the oak dies, as in the space of a comparatively small period of time it does, it turns again to dust and eventually to inorganic dust, substantially similar to the inorganic matter of which, by virtue of its wonderful assimilative powers, it originally built itself up. The leaves which, from season to season, performed their functions and appropriated and assimilated their appointed portions of carbon, just as regularly after their work was over, first turned yellow and then brown, then fell off, rustled for awhile over the ground, drifted into hollows, and in time rotted into mold. The wood of the tree lasts longer; but it, too, eventually must succumb to the same fate. If it be cut into cords and thrown into the oven, the change is more rapid than if it be left to lie in the forest until it returns to its original elements; but in both cases the process is essentially the same. Under any and all circumstances, whether it be by the rapid consumption of fire, or the slower process of parasitical dry-rot, or the long and tiresome disintegration of gradual decay, there is, in the end there must be, in every case, a disruption and dissipation of the molecules as if they had never been united in a living body.

HORTICULTURE.

Damsons in Tulare.

The Tulare Register advises the orchardists of that county to pay more attention to the damson plum, the culture of which has given very satisfactory results. The Register says:

With perhaps the single exception of grapes, the common damson has proved to be the most prolific fruit raised, taking one year with another. It would not take any great amount of it in an undried state to supply the home demand, but, properly dried, it has the world for a market. A farmer near Tulare who has about 50 trees, informs us that they commenced bearing the second year from setting, and for five years have not failed to crop, though apricots, peaches, apples, etc., have each had their "off years." But for vigorous pruning the plums would, most seasons, bear their limbs to the ground, and the trees are one of the most attractive in the orchard for their beautiful and prolific fruitage.

No fruit tree stands this climate better than this plum. About twice as many trees can be set to the acre as of the larger kinds. If properly pruned, they bear their fruit low enough to be mostly picked by hand from the ground. Birds and tramps do not mutilate or destroy the fruit, nor insects assail the trees as yet, and if they should they would be much easier got rid of than from trees of a larger growth. The fruit is so late in ripening that most of the bird and insect pests are gone before the fruit is sweet enough for their taste. It dries nicely most seasons if left on the trees, but pitted and dried in the sun the fruit commands a better price and readier sale than sun-dried grapes, apples, peaches, figs, apricots or pears. As a shipper and keeper in a green state, it is not excelled by any fruit we know of raised in this State. E. M. Dewey, who has a few trees in bearing, confirms what we have said. He is putting out damsons in place of other sets this year, and next year he intends replacing his apple trees with plums, apples not being a suc-

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Company, publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS, and the California Patron as a monthly,
Resolved, That the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

The Ballot Reform Needed.

Considerable discussion of the proposed election system has been taking place of late both in the press and in organized bodies throughout the State. We have before recommended that the different Granges take up this matter and discuss it, and we wish to emphasize the suggestion now. The following lucid explanation of the effects of the law on the voters of our State, from the pen of Judge Wm. C. Blackwood, Master of Eden Grange, Haywards, will probably assist Patrons in arriving at a thorough understanding of the proposed law. We recommend a careful perusal of the same, and that some action be taken to urge members of the Legislature to act in favor of the bill:

MESSRS. EDITORS:—That some system needs to be devised by which an honest expression of the will of the people by a free ballot can be obtained is no longer open to controversy. A system is needed which secures to the elector absolute secrecy as to the ticket he votes. A system is needed which offers the least possible security to the vote-buyer that he will get value received for his money when he would part with it for a ballot to be cast for his candidate. A system is needed that may enable men to become candidates for offices without sacrificing their manhood, and without subjecting to election expenses nearly equal to, and in some instances exceeding, the emoluments of the office to which the candidate aspires.

A system as indicated is demanded by every honest, intelligent elector. All the essential features of such a system seem to be embraced in the new Election bill, embracing the so-called Australian system of conducting an election now before the Legislature for consideration. The provisions of this bill would seem to provide for an absolutely secret ballot. The ballot being an absolutely secret one, the vote-buyer can have no security that the man whose vote he buys will deliver the vote as per contract. This buying and selling votes being a nefarious transaction, the dealer in ballots will naturally distrust the honesty and good faith of him who would sell his birthright for a mess of pottage, and that, too, when he held in his hand both money and the mess of pottage, with power to deliver the pottage, or not deliver, and the vote-buyer be none the wiser. It does seem to me that vote-buying under the provisions of the bill would be reduced to a minimum.

Again, under the provisions of the bill there is no excuse for assessing candidates for election expenses. These, as is well known, under the present election system, are so great as to deter many capable men from aspiring to public office. These heavy election expenses are made an excuse for the high salaries attached to county offices. Abolish these heavy election expenses, and then the people, with some show of realization, may demand a reduction of official salaries.

Again, the provision of the bill opens a way to independent nominations when the candidate is put forward by his fellow-citizens respectable in numbers. This provision of the bill I regard as among the best in it, as it would make nominating conventions more solicitous to bring forward for office the most suitable men in their respective political organizations.

If the people of the United States would preserve inviolate the elective franchise, they must adopt some plain law of election which, as far as possible, will secure to every elector the right without fear or intimidation and the power to cast his ballot for the man of his choice. Vote-buying and vote-selling must be made, as it once was, dishonorable and disreputable. Election expenses must be borne by the people, and not by the candidates, all of which the impending bill before the Legislature, if enacted into a law, will tend to accomplish.

BLESSINGS IN VARIETY.—An "exchange" remarks that a gun club, a Grange of the Patrons of Husbandry, a brickyard and fair crops are in prospect at San Miguel.

From the Master's Desk.

BROTHER EDITORS:—I am home again after a few days' absence on Grange work. I left home on the evening of the 4th for Merced, to meet the Worthy Master of Wisconsin State Grange, Bro. Carr, who was to speak at an open meeting on the 5th, to the Grangers and all others who would favor him with their presence. I was accompanied by Bro. McIntosh, Overseer of Stockton Grange. We left Stockton at 8:05 P. M., and arrived in Merced at 3:30 A. M., being compelled to lay over at Lathrop four hours. Met Bro. Carr and also Bro. and Sister Carr of Bennett Valley Grange. Listened to him in the afternoon. His address was very interesting and instructive, and, I think, appreciated by all. Held an informal meeting with closed doors in the evening, and rendered the secret work. Left at 5 A. M. for Stockton, and arrived at 8 A. M. Attended Stockton Grange, which opened about 11 A. M. with a good attendance. At 12 M. closed the Grange and repaired to a bounteous luncheon. At 2 P. M. returned to the main hall and commenced an open meeting. Worthy Past Master Wm. Johnston and daughter arrived just before lunch. At 2 P. M. the meeting was called to order and opened by singing, then Bro. Johnston was introduced and welcomed Bro. Carr in the name of the State Grange to our State and Grange circle. In response Bro. Carr gave us a treat in a very able and instructive talk, a synopsis of which I will inclose from the Stockton Mail. On Thursday morning, my wife and I, accompanied by our guests, took the 8 A. M. train for Sacramento, and before reaching our destination, our little band of good and true Patrons had increased to 16. Arriving, we found that stalwart Granger, Bro. Flint, awaiting us at the depot, and as arrangements had been made for our meeting at 1 P. M., we had some time on our hands, which we put in very pleasantly, and I think profitably, by visiting the Capitol. Found the Legislature in session, visited both the Senate and Assembly; also the Governor. Found him alive to our interests, and willing to co-operate in all good measures to forward the interests of our State and agriculture. He informed me that an invitation had been sent to the Secretary of the National Grange by the unanimous vote of the Legislature, through him, for that honorable body to hold their next annual meeting in California. We also met that stalwart Granger, B. F. Langford, who has gained the title of "the Father of the Senate." To him we are indebted for the bill which has been introduced in the Senate to appropriate \$10,000 to help defray the expenses of the N. G. on this coast. And I would recommend that all Patrons who are anxious to have the N. G. come to this coast write at once to their representative and explain why we ask for the appropriation. A committee of seven was appointed by Sacramento Grange to look after the bill—three brothers and four sisters. We had a good meeting, and Bro. Carr is more interesting every time you listen to him. We left on the 6 P. M. train for home, feeling a regret we could not continue our trip and visit to San Jose on Saturday, but business at home prevented.

While at Merced I was told by two young sisters that Merced Grange was going to try to get the premium which is offered in the last RURAL PRESS for the first class of ten—men and women. But I will say they will have to look well to their laurels, as Stockton Grange is waking up, and received two applications at the last meeting. Stockton Grange had a good meeting on the 9th and I think Bro. Carr had done a great good to all the Granges where he has been.

Yours fraternally,
W. L. OVERHISER.
W. M. S. G. of Cal.

Reception at San Jose.

MESSRS. EDITORS:—Saturday, February 9th, was an enjoyable day to all who had the good fortune to be present at the generous reception tendered by the San Jose Grange to Worthy Master S. C. Carr of the Wisconsin State Grange and Brother and Sister Nelson Carr of Bennett Valley Grange. The visitors were met at the incoming train and taken to the hall. After introductions and friendly greetings, all who wished were driven about the city. Returning, we were favored by a song from the talented, well-known poet, author and songster, James G. Clark, which was highly appreciated. As an encore, he kindly favored the audience with an original unpublished gem, entitled "Star of my Soul." Then all were seated to partake of the Harvest Feast, which reflected great credit on the superior taste and abilities of our San Jose sisters as practical cooks. Their generosity was fully evinced by the tempting viands which filled to overflowing four long tables. Conversation and good cheer abounded. A witty toast offered by Brother Cressey brought forth sharp crisp responses from Worthy Master Alley, Brothers Wilcox, Nelson Carr, Sanders, Dewey, Sister Carr and others. Sister S. A. Bicknell offered a toast. By invitation of Bro. Dewey, Professor Clark kindly gave a whistling song, imitating most perfectly the varied liquid notes of the western meadow larks, ending with a most amusing description of a rival scene between two of these songsters of which he was an eye-witness. Adjourning from the tables, we were called to order and Sister Roxie Dennis of Eden Grange sang "Sunshine After Rain," followed by a recitation

from Sister Jessie Calhoun, Lecturer of San Jose Grange, entitled "The Jealous Wife." This very pleasing program closed with a song from Mrs. W. D. Ritell entitled "Marguerite." At its close Worthy Master Alley arose and introduced the distinguished guest and orator of the day, Worthy Master S. C. Carr of the State Grange of Wisconsin, who held the audience interested and spellbound for nearly two hours with his earnest, glowing words. He concluded his address by most eloquently exhorting the members of the Grange to live in the sunshine and not in the gloom. At its close, on motion of Captain Dunn, a vote of thanks was given to the speaker. Worthy Master Alley then read a telegram from W. L. Overhiser, Worthy Master of the California State Grange, congratulating San Jose Grange on having Bro. Carr with them and expressing regret at his inability to be present. Among those present was Bro. T. T. Hooper of Montezuma Grange and Bro. and Sister E. Howe of Wisconsin.

S. H. D.

Temescal Reception.

MESSRS. EDITORS:—Through the kind invitation of Sister M. S. Smith of Yuba City, the members of Temescal Grange assembled on Saturday evening last at her beautiful, newly-built Oakland home to do honor to our distinguished guest, S. C. Carr, Worthy Master of the State Grange of Wisconsin. Bro. and Sister Nelson Carr of Bennett Valley and Bro. T. T. Hooper of Montezuma Grange were also present, and other invited guests. Bro. Carr being introduced by Bro. Dewey, responded with earnest, well-chosen words. Having to leave on the 9 o'clock train for Pasadena, his remarks were necessarily brief but full of meaning, and will long be remembered, together with his genial, social manner and hearty handshake. We hope to meet him again in November next at the National Grange held in California. Worthy Master Goodenough responded in behalf of Temescal Grange in his usual timely and happy manner. A resolution, published elsewhere, thanking Bro. Carr for his visit, was adopted.

Our good brother then departed for the train. Nearly all of the others lingered, and Sister Smith's daughter favored us with a piano solo, and later on with a fine recitation. Dora McGrew also kindly gave a piano solo, all of which was thoroughly enjoyed by all. Refreshments followed, and at a late hour for Grangers, we took leave of our genial hostess well pleased with our informal social meeting. S. H. D.

Laws Regarding Homicide.

EDITORS PRESS:—Is it not about time to make some change in the attitude of the State toward those citizens who put others to death by bludgeon, pistol, dirk or poison? We have now had laws on our statute-books against murder for a great many years, but people keep on murdering. The papers are full of accounts of such illegal doings, and the survivors of these killing affairs are often arrested and put to a great deal of trouble and (if they or their friends command money) to great expense in the way of hiring "legal talent," while it costs the State, also, thousands upon thousands of dollars to try and ultimately acquit them. It is true that now and then a poor Chinaman, and at still rarer intervals one of the Caucasian race, is sent to prison for life or dramatically executed for unjustifiable homicide, but these sporadic cases are exceptional, and the antiquated prejudices that still prevail in some quarters against murderers as a class ought not to be allowed such weight when practically they occasion so large and useless an outlay of the people's money.

We don't believe in keeping dead-letter laws in the code; if they are not backed by a public opinion sufficient to insure their enforcement, better have them repealed. The fact is, men always have murdered, more or less, since the earliest days of which we have any record; they still do it, and the probability is they will keep on doing it in some measure, and you can't prevent it.

Then why not try to devise a way by which the State can derive some income from a practice that it seems powerless to put a stop to?

Why not pass a law forbidding assassination without a license, and placing the license so high that only respectable and influential persons could indulge in it? If inconvenient for the applicant to pay cash in advance, he might be required to give bonds in such amounts and with such securities as certain officials (to be specified in the statute) might deem sufficient to protect the financial interests of the community.

If we can't suppress by law even such "crimes" (the word may seem harsh to some) as running the gambling business on State and district fair-grounds, selling liquor to minors and habitual drunkards, or drumming for lottery swindles (unless it be those conducted by Mongol aliens), why hope to effect any considerable good by these terribly expensive and tedious murder trials? Why not use some common sense in the matter, make the best of the actual conditions, and get some revenue out of what we can't abolish?

S. Y. D.
Sacramento, Feb. 12, 1889.

The P. of H. Driving Along.

There seems a "Forward March" movement in the Grange on this coast. The visit of Worthy Master Carr of Wisconsin has had an enlivening-up influence in various quarters. Worthy Master Carr was highly pleased with his reception everywhere by our Patrons. He will take a good word from California to Wisconsin and wherever he goes.

Brother Roache, who recently organized San Lucas Grange, writes that the new members are very enthusiastic, and with a little help and encouragement in becoming well posted in their duties, will no doubt settle down into a splendid working Grange. The recently reorganized Grange at Salinas seems determined to be well heard from in the near future. We have no doubt but that the old and new members who propose to join the reorganized Gilroy and Hollister Granges will succeed well. Each of these Granges mentioned will be a help to one another, and make a good showing for that section of the State.

The Grange is a progressive Order. The changes which have been made in the constitution of the National and State Granges, increasing materially the rights and privileges of subordinate Grange members, cannot otherwise than prove of great benefit to the Order as a whole. The adoption of the combined ritual, condensing and improving the initiatory services, and affording more time for agricultural discussion and social privileges, will help start the Grange along.

Let every farmer who believes in combination and co-operation for the benefit of all agricultural interests now step forward and put his shoulder to the wheel "in the nick of time."

Work for an Improved Election Law.

Let every Patron read in our columns to-day Judge Blackwood's candid and well-considered words in regard to the proposed new election law. If such a law can be secured for California, we believe it will do more than all other laws possible to be passed at this session of the Legislature in the welfare of the people. We think his statements in favor of the law are sound and incontrovertible. We would name another good feature of such a law, regarding the manner of nomination. It often occurs that Democrats for non-political offices would prefer for a non-political nomination to vote for some Republican whom he considered pre-eminently fitted for a certain position. On the other hand, some Republican might prefer a Democrat under similar circumstances. Under the proposed new law, they could unite in nominating, under such circumstances, the best man of all others.

We hope every friend of reform will look into this matter, and become sufficiently earnest to write in season to their own members in the Legislature, and back them up in voting for the proposed new law. We would urge this question as one of the utmost importance to be discussed in our Granges at this time.

Hollister Grange.

We have a good deal of faith that one of the best Granges in the State will be reorganized at Hollister, as we know some of the men who are leading spirits in it. Bro. Nason, who lives in that jurisdiction, is one of the most earnest Patrons who has visited the State Grange. Mr. S. T. Elliott, who is down for a new member, is another sterling man and able speaker who has the courage of his convictions wherever he goes or talks. Hollister Grange, when reorganized, will be in good hands. We urge all good men and women who may see this notice and are eligible to become members, to present themselves at the meeting on Friday afternoon without fail.

AN HONORABLE INSTANCE.—The Bulletin correspondent writes from Sacramento, under date of Feb. 8th, as follows: The members and attaches of the Assembly who attended the session yesterday came near suffering a general stroke of paralysis. One of the attaches, by name George E. Waddell, appointed File Clerk about three weeks ago, resigned because he could find nothing to do. His conscience was not equal to the strain of drawing \$4 per day from the Treasury without rendering any service therefor. Mr. Mullaney attempted to take advantage of the situation by introducing a resolution to appoint M. A. Devine to the vacancy, whose conscience is, presumably, equal to the occasion, but when Speaker Howe announced that Waddell had come to him and resigned because he could find nothing to do, the Assembly, in its blind amazement, referred the resolution to a committee. Some of the members, and all of the attaches, are still suffering from the shock. Waddell is looked upon as a curiosity wherever he goes. His case will go down in legislative history as the most remarkable ever known. The position of File Clerk never had any existence, for the file is made up by the clerks at the desk. Nobody ever suggested anything for that clerk to do, except to go to San Francisco and stay there until sufficient salary accumulates to pay him for returning to Sacramento. The Assembly will probably not appoint Waddell's successor.

About Grange Reorganization.

Gilroy Grange.

February 7th we were fortunate in meeting a number of the old members of this Grange in Gilroy, who were not included in those pledged for reorganization by Mr. F. B. Logan, agent for this paper.

There is no doubt in our mind that a good strong Grange can and ought to be built up soon in this improving town and its farming neighborhood. The good effects of the final settlement of land titles adjacent to Gilroy are already being felt in town improvements. The successful cultivation of a large variety of fruits in this part of the Santa Clara valley has already increased its thrifty horticultural and farming population.

Many of the difficulties and discouragements which have beset Granges generally throughout the State, as well as local drawbacks during years past, have been so far removed as to give new and decided encouragement for the future growth and welfare of such as are reorganized by willing and determined hearts and hands.

Half of the ritualistic work has been dispensed with and the rest improved. The annual State Grange meetings have constantly increased in attendance and interest even while the number of subordinate Granges was declining.

The educational and social features of the local meetings have also been advanced, and from what we have seen and learned in Gilroy, we feel more than hopeful that a permanently useful and enjoyable association will now be formed.

Old members will be reinstated on the payment of \$1.20 each; and without formal initiation new members will be received at the organization at the rate of \$3 for men and \$1 for women. Boys can now join at 16 and girls at 14 years of age.

Hall rents are cheaper now in most towns in this coast than they were a few years ago. The emblematic badges of the Order are better and handsomer at about one-fourth the cost of the old style of regalia.

Exchange visits between neighboring Granges are more common, and have a gratifying and sustaining influence on the membership in various counties.

Watsonville Grange is becoming enlivened, and will doubtless hold more than ordinarily interesting meetings during the year. Sister Roache, its talented Master, is one of the highest and well deserving past officers of the State Grange. When called upon to speak or recite, she has never failed both to please and to enlighten the patriotism of her listeners.

The achievement of Watsonville Grange in making agricultural fairs successful without gambling, pool and dram selling can be equaled by Grange co-operation in Gilroy, as well as other places, in other good work.

Try it, farmers, young and old. It will do you all good. It will pay as you go. That must be a poor soul that has frequently met in fellowship before the altar of the Grange and not a better man or woman for it.

Farmers, don't let the failures of long ago deter you from combining and securing an even leverage with other organized industries and less worthy combinations.

The financial and other important conditions of the Grange in our State and nation, by reason of the education and experience of the past, are better than ever before for the encouragement of subordinate Granges.

More time is to be devoted to agricultural, domestic and financial improvement and government reforms.

The meeting at Gilroy will be held in Wright's hall at 2 P. M., Thursday, Feb. 14th, with Bro. A. P. Roache, steward of the State Grange, as organizing deputy. We hope a visiting delegation of Patrons from San Jose and other Granges will be present. Members of Gilroy Grange and other eligible farmers, their wives and daughters, should attend generally and embrace the opportunity now offered.

We regret that the meeting is set at so late an hour as 2 P. M. The attendance should be prompt. The hall will be open at an earlier hour, and we would suggest that those who can, meet earlier for conference and exchange of views and social greetings.—*California Patron for February.*

A LIVE ASSEMBLYMAN.—We print in another column the essential portions of the bill relative to an increased plant of jute machinery at the State Prison, and limiting the price of jute goods, introduced into the Assembly by Bro. D. A. Ostrom of Yuba county, who writes us that the farmers seem to be more interested in this bill than almost any other. He has also introduced a bill, similar to Langford's Senate bill, appropriating \$10,000 toward the entertainment of the National Grange in case it holds its next session in California. We are also indebted to our wide-awake Wheatland brother for copies of numerous bills before the Legislature this winter.

TRAMPS AT SANTA CRUZ.—The *Surf* claims that its persistence in showing up the cost to the county of feeding tramps and getting nothing in return, when the law compelled petty criminals to be worked on the streets, etc., has at last effected the fulfillment of the law, which allows the sheriff to turn prisoners over to the city authorities to be put at work for municipal benefit.

Therefore Chief of Police Lunt will have the man of many names, with shackles on his legs, busily engaged this morning in performing the much-needed act of sweeping Pacific avenue. Chief Lunt is having half a dozen pairs of shackles prepared for tramps and other petty criminals, and all will be put to work at long sentences. This is believed to be the best way to rid this county of tramps and of small fry malefactors.

Merced Grange.

MESSRS. EDITORS:—Merced Grange, No. 7, P. of H., met in Pythian Castle, Feb. 2, 1889, Worthy Master Elliott in the chair. After the Grange was called to order the Worthy Master handed the gavel to Bro. Frisbie, Deputy at Large, to instruct two sisters in the Third and Fourth Degrees, which was done in a very able manner, as the brother has memorized the secret work. Then our Organist played a march and all went out to the well-laden tables and did full justice to the viands, especially the Secretary, who ate a great deal and a long time.

Then all repaired to the hall and the officers were installed, except the Lecturer, Chaplain and Steward. Bro. Frisbie was assisted by Bro. Brouse of Ceres Grange. The worthy brothers were given a vote of thanks for the able manner in which they did their work. The Grange was appointed a Committee of the Whole to meet the Worthy Master of Wisconsin State Grange and W. M. of California State Grange, to make their short stay pleasant while among us.

MRS. E. S. ELLIOTT.

Decline of the Debris Evil.

Ten years ago no fair-minded and candid citizen had any doubt as to the equity of the then arising conflict between the people of the Sacramento valley and the hydraulic miners. The valley being the "under dog in the fight," it was held by many well-meaning men to be a hopeless and unequal contest. However, the original "cabbage-patch" that was being injured grew to be a good-sized farm, then several farms, then townships, then navigable rivers and bays. All these interests became a unit on the side of equity, demanding protection and preservation. Whatever the opinion then, we can now see the inevitable which, though delayed by a wily foe, was nevertheless inevitable.

During these years of agitation the State and the General Government have ranged themselves on the side of the injured farmers and rivers, and although their mills have ground slowly, the gri t is about completed.

It is now well understood and relied upon by capitalists that the rivers shall not again be used as sluice-ways to transport the mountains to the valleys and the sea, and we find them investing millions in river-lands either in purchases or loans for their improvement. Thus we have the new and very extensive enterprise of A. T. Hatch on the Hamilton bottoms on Feather river, eight or ten miles below Oroville, where 800 acres are being planted to orchard. Here an interest of millions in horticulture is growing up, right in the track of the avalanche that was to have come from the Miocene and other hydraulic mines, except for the interference of the courts. Can any one suppose that that adjustment will be reversed? Will any one believe that Mr. Hatch did not realize what he was doing? Again, we are cognizant of a loan of \$30,000 to \$40,000 having been made by a San Francisco loan office on a large tract of land lying in the "very jaws" of the fell destroyer, with a full knowledge of the situation both as to the lay of the land and the hydraulic situation, who stated to the writer most emphatically that except for the present prospects not a dollar would have been invested in that direction. We may also rightfully claim that the present faith in our river lands and demand for river improvement is based entirely on the improved condition of the mining question. We might add other known evidence of the stability of the winning cause were it necessary, but the truth of it will hardly be controverted.

Now a word to our antagonists and we are done. It was of course expected that complete submission would follow upon the heels of the declaration of the law; that it was not so is certainly no fault of the valley, and reflects very unfavorably on the defendants. That the stubbornness is gradually giving way to better counsels is apparent in our rivers and all along the hydraulic districts; that greater values reside in the ex-mining ditches for irrigating purposes on the western slopes of the Sierras than for mining purposes is becoming a daily fact; hence the anti-hydraulic, anti-mud, anti-slickens, sentiment is gradually becoming universal. The forbidden industry can never be revived, and with its disappearance will come the old feeling of mutual regard and a community interest. The valley could not have been less determined, and it will forgive and forget, and hope for a better era for all concerned.—*Sutter Farmer.*

BRO. D. WOODMAN has written Worthy Master Overhiser that he will be in Stockton the last of this month in time to attend the Pomona Grange meeting. A visit from our sojourning Bro. will be appreciated by the San Joaquin Patrons. There is a long latch string out for him at Temescal's gate, also.

Worthy Master Carr's Reception.

[From the *California Patron* for February.]

It is gratifying to all Patrons that so hearty a reception has been given to the Worthy Master of the Wisconsin State Grange at the points visited—Tulare, Merced, Stockton, Sacramento, etc. The Patrons of each place have done credit to themselves and their fellow-Patrons of the State. They have made grateful the heart of the noble representative of Wisconsin, who has been so magnanimous as to sacrifice a goodly portion of the limited time he could command from his official duties at home for visiting his noble kindred on this coast, own brothers and their wives, whom he had not met for a period of over 35 years.

His deep regrets were sincerely expressed at not being able to visit Yuba City Grange on account of physical inability resulting from a cold unfortunately contracted. No one regrets this unavoidable event more than ourselves. We have not heard from Yuba City, but have no doubt that a host of loyal Patrons would have received him with honor, and been more than pleased with Bro. Carr's plain but earnest eloquence.

A very pleasant party of Temescal and other Patrons gathered at the residence of a member of Yuba City Grange, Mrs. Mary S. Smith, residing at Oakland, where, with Bro. Nelson Carr and wife, all bade him good-bye and God-speed. A very enjoyable evening was spent by all present, and the following resolution adopted:

Resolved, That we heartily extend Worthy Master S. C. Carr of Wisconsin State Grange many thanks for his able and generous services in visiting and speaking before this and other Granges and eloquently advocating our cause, for the benefit of Patrons and farmers throughout our coast, and that we hope to welcome him again to our State, together with all other members of the National Grange; also that sincere thanks are due Bro. Nelson Carr and wife of Bennett Valley Grange for accompanying and assisting Worthy Master Carr in his travels.

Bro. Carr's visit will be long remembered among the bright hours spent in educational and social Grange work in the lives of our Patrons. We trust that his visitation is but the forerunner of other good things to come, in the way of more fraternal exchanges to be enjoyed hereafter, and which, with enlarged experience, we shall be able to make more widely effective in usefulness and enjoyment.

Jute at San Quentin.

Assembly Bill No. 14, introduced by Mr. Ostrom Jan. 14th and referred to the Committee on State Prisons, appropriates \$160,000 for the immediate purchase of additional jute machinery, the erection of buildings for the manufacture of jute goods, etc., and is mandatory as regards the Board of State Prison Directors, the State Controller and the State Treasurer.

The third and fourth sections are as follows: **SEC. 3.** It shall be the duty of the Board of State Prison Directors from time to time to fix the price at which jute grain-bags and other jute products shall be sold by the State, but at no time shall the price so fixed be more than one cent for each grain-bag in excess of the net cost of producing the same, exclusive of prison labor; and it is made the duty of the State Prison authorities to confine the sale of jute grain-bags and other jute products to farmers and other consumers, and to retail dealers direct; but no order shall be filled for any one individual or firm during any one year for more than fifty thousand bags or their equivalent in other jute goods, except on request of the Warden and the unanimous approval of the State Board of Prison Directors.

SEC. 4. Demands for grain-bags and other jute goods by farmers and other consumers, and retail dealers, shall be promptly filled in the order in which they are made, but when the supply shall be short, demands shall be registered at the prison as they come in, and filled from the output of the jute-mill in the order of registration.

A previous legislation which would conflict with the Act is repealed, and the Act is to take effect from its passage.

Florin Grange.

MESSRS. EDITORS:—The installation of our officers for the ensuing year did not take place on the 9th on account of the death of Sister E. Reese. Her funeral took place on Friday, the 8th. She was one of our oldest members, being 71 years of age, and was also a charter member of Florin Grange.

We have at present a class of three on their way to the Harvest Feast, a notice of which will be given to all members in due time.

Florin, Feb. 10th. S. H. FASSETT, Sec.

AN ABSURD SWINDLE.—The *Vallejo Chronicle* of Feb. 8th says that a middle-aged man, well dressed, was around that town Wednesday, visiting private residences and working one of the most bare-faced swindles of the age. He had in his overcoat pocket a few bunches of small-sized lamp-wicks, colored a light bluish tint, which he claimed possessed a chemical property that, when placed in a coal-oil lamp, would cause a brilliant light and keep the oil from consuming; that with one of the wicks placed in the lamp the oil would not burn out

for six months. He was a smooth, oily-tongued talker, and succeeded in disposing of a large number of the wicks at 25 cents apiece. He could sell no more than six in one house, according to instructions from the company manufacturing the wick-ed swindle. In several instances he succeeded in selling that many at one time. At night, after the lamps had been lighted, the anxious housewife watched in vain for the oil not to disappear as of yore; but it was of no use, it burnt out just as fast as ever, and no better light was given. And now there are in town a hundred females irate over the swindle they had perpetrated upon them.

From Worthy Pomona.

MESSRS. EDITORS:—Yesterday morning, in company with my father, I took the train for Stockton. We arrived there on time and went directly to the hall, where we found many happy brothers and sisters assembled to greet our distinguished guest, Bro. Carr, Worthy Master of Wisconsin State Grange.

After a few remarks from members of Stockton Grange we were invited to march to the banquet-hall, where a genuine Grange dinner was spread, which all seemed to enjoy, if one could judge by the way the chicken salad and roast turkey disappeared. After our return to the hall Bro. Overhiser introduced Past Master Wm. Johnston, who welcomed Bro. Carr to our midst. Bro. Carr then entertained us for an hour, an hour that seemed but half the time, a fact made evident by the profound attention given him while he gave one of the finest Grange lectures ever delivered on this coast. Many others were called upon, who responded cheerfully, giving wings to the afternoon, and we left Stockton well pleased and with a resolve to accept all invitations we may be fortunate enough to receive from that Grange.

Yours fraternally, MATIE U. JOHNSTON.
Sacramento, Feb. 7th.

Grange at Hollister.

EDITORS PRESS:—I read in the *PRESS* lately that Gilroy is to have a Grange organized there. I have heard old farmers who used to belong to the Grange in Hollister express an opinion that if it were started here again it would prosper and be of profit to the farmers.

Years ago, when the Grange was so popular in Hollister, many joined it who were heedless, and did not fully realize the purpose it was intended for. Consequently, when the first wave of trouble came many were ready to drop it instead of trying to uphold and carry it through.

I think were it reorganized, few but substantial, sober farmers would join; so it would be on a firmer basis and more likely to be permanent.
Hollister, Feb. 10, 1889. SUBSCRIBER.

Roseville Grange.

Bro. Secretary: Inclosed you will find list of installed officers. I sent you a complete list immediately after installation. Our new officers seem to be awake and have resolved to make Roseville Grange a live Grange. Last meeting our hall was filled with smiling faces, noticeable quite a number of young members. It was decided for the best interest of our Grange and the advancement of our Order and intelligence of our members that our Grange institute a free circulating library for members of the Grange.

Also, quite a lengthy program was prepared by the Committee on Good of the Order for next meeting, third Saturday in February.

Roseville, Feb. 9th. M. T. L., Sec.

The Grangers' Bank.

A very significant indication of the confidence which the stockholders of the Grangers' bank have in that institution is found in the promptness with which the seventh annual installment of 10 per cent of the par value of the shares has been paid. The notice of delinquent stock which is published this week contains only the shares which belong to an estate and in which a doubt arises between the trustee and the legatee as to where the duty of paying the assessment rests. Had it not been for this complication, there would have been no stock delinquent.

The payment of the seventh installment, with others which have preceded, gives the bank \$700,000; add to this the amount of stock fully paid up and the reserve fund, which is about \$110,000, and the bank is seen to have a capital now of \$810,000, fully paid in, a near approach to \$1,000,000, which is the par value of its capital stock. It will soon reach its solid million dollars. What a contrast to the condition at the opening in April, 1874, when Manager Montpelier, then teller, received \$24,000 as the full cash assets of the institution. During its life, up to January 1, 1889, the bank has paid cash dividends to stockholders of \$575,000. This is a good and promising record.

BAGS AT SAN QUENTIN.—The Assembly Prison Committee finds that the night shift at the jute-mill at San Quentin is not a success. It costs 5½ cents to make a bag in the daytime, and 9 cents at night—more than the price received.

The First Cigar.

'Twas back in papa's old woodshed,
One beasty, sultry day,
I sat upon a cracker box
And whiffed and puffed away;
And as the heavy smoke arose
Like fumes from burning tar,
I heaved a sigh, a deep "Oh, my!"
It was my first cigar.

I leaned upon a cordwood pile,
As sick as sick could be,
The curling, writhing, snake-like smoke
Seemed bent on taunting me.
I fancied me as borne away
On swiftly moving car;
I cursed the day I first indulged
And smoked my first cigar.

I saw a promised bright career
Fast drawing to an end;
I felt broke up and much the same
As one who'd lost a friend.
Within my boyish vitals
Was raging a fierce war.
"O Lord!" I cried, in accents wild,
"Forgive my first cigar."

I've seen the girl, the one I love,
Shake me for Jack or Jim;
I've stood behind a busted flush
With features dark and grim,
But I never had a feeling
That could with that compare
When, silly boy, I sought the shed
And smoked my first cigar.

—M. J. Donnelly in Pioneer Press.

The Bachelor's Mail on Valentine's Day.

I am a bachelor, the lawful butt
Of maiden shyness and of boyish wit.
That villain postman—now my door is shut
I fear the burly rascal not a bit—
Has piled my table full of notes and cards,
All sorry trash, I'll wager. Let me see;
My washerwoman sends me her regards;
Ads; tradesmen's bills; appointments two or three.
H'm, now the valentines; each year they come,
By saucy nephews sent, and nieces bold.
Imprimis, here's Jack Horner, with his thumb
Immersed in pie; the legend—"You are old;
Explore the matrimonial pie before
The plums are all picked out." Well, well! and
there,
A bald head and a bottle—"Twill restore
Those locks ambrosial; try it!" I declare
I've read enough. When children, ten years old,
Preach matrimony, I'll resist no more,
But fling my heart and hand, my name and gold
At the first head that peeps inside my door.
(A knock; the laundress enters.) Fate forlorn!
Here, woman, take thrice what your work is
worth—
(She leaves, amazed.) St. Valentine, befriend
The bachelor—he has no friends on earth.

—Walter Clarke, in Table Talk.

The Reedstown Postmistress.

[Written for the RURAL PRESS by I. H.]

(Concluded from last issue)

Tea was just over, when Mr. Archer appeared. Mrs. Anderson gave him a cordial welcome.

"These are my children," she said, turning to introduce them. "Margaret you already know, and this is Kitty."

"Kitty—" There was an indescribable tenderness in his tones as he looked at the girl who held out her hand with a blush and a smile.

"We gave her the name of the sweet young friend we remembered so lovingly," said Mrs. Anderson.

"God bless you, dear child," said Mr. Archer in low, fervent tones as he bent his head and touched with his lips the hand he held in his.

The bright color deepened on Kitty's cheeks and her eyes were full of tears. There was silence for a moment; then Mrs. Anderson recovered herself.

"Have you been back to the old home?" she asked.

"Yes, at last. Charlotte's daughter was married in December, and being in Boston on business, I must go to the wedding. Once there, I revisited all the old familiar spots, but I seemed to myself a veritable Rip Van Winkle."

"Is the place itself much changed?"

"You would not know it. Great noisy factories in the quiet, grass-grown streets, all the old houses pulled down, the picturesque little mill replaced by a huge pile of unsightly buildings. I seemed at home nowhere but in the cemetery among the dead."

"All, all were gone—
The old familiar faces."

"I could not stand it. I went back to Boston and took the first steamer for Liverpool to escape the ghosts of a dead past. But this is dreary talk for these young people to hear," he said, suddenly starting up. "Charlotte—you

remember my sister?—Charlotte was quite vexed with me, and said I ought to rejoice in the prosperity which has come to my native town. Perhaps I ought."

"I am sorry the old mill is gone," said Kitty. "I always hoped to see it some day. Mother has told us of the good times you used to have there. I suppose you remember the fishing party, when the girls were riding home in what we call a dump-cart, and in some mysterious manner the fastenings gave way and girls and fish rolled out on the ground together."

Mr. Archer joined in the general laugh. "Yes, I remember," he said.

"I have always had a strong suspicion that it was not altogether an accident," said Margaret.

"Come, come, this is retribution indeed—after thirty years to be reminded of one's youthful follies."

But all the same he seemed to enjoy the revival of old stories which Mrs. Anderson had made household words to the two girls. One followed another till the evening wore away and he left, promising to call again if he remained another day in town.

"Oh dear!" exclaimed Kitty, as soon as he was gone. "To think of any one being able to take the next steamer for Europe just for a whim! Doesn't it make you hear the rattle of your chains?"

"Thou shalt not covet," said Margaret, quietly.

"I am not coveting. I wouldn't take away his riches and reduce him to poverty, not even to go to Europe myself. It wouldn't become him at all with that air he has about him of a grand engineer. I declare, when he kissed my hand—"

"Kitty! Kitty!" interrupted Margaret, indignantly, "how can you be so shallow? That was something not to be spoken of lightly."

"Dear me, Margaret, I'm sure you must have seen that I had hard work to keep from crying; but one can't keep up that kind of thing forever. I was only going to say I don't covet his wealth, but I would like to share it if he would endow me with a generous slice on account of my name. That would be a tribute to his wife's memory."

"I'm afraid you are incorrigible," was her sister's answer.

Mrs. Anderson had not heard any of this idle talk. The awakening of old memories had been too much for her, and as soon as her guest was gone she had said good-night and sought the privacy of her own room.

Mr. Archer did not leave Reedstown the next day, nor the next, nor for many days after. The little community began to be greatly exercised on account of him. What was his business? Why did he stay so long? Was there any special attraction in Mrs. Anderson's house? It was difficult to find an answer to these questions, as no one dared to put them to Mr. Archer himself.

Kitty openly announced that he was an old friend of her father and mother. "I am his wife's namesake," she added.

"Oh, then he has a wife," was the response, and Kitty, for reasons of her own, added no more.

Evening after evening Mr. Archer spent in the cozy little parlor, where there was talk with the mother of by-gone days, reminiscences of travel, or chat about men and books. Gradually he fell into the habit of bringing a paper or a magazine to lend them; sometimes he would send for a book to be read together. Then, in the long summer evenings he would come with a double-seated buggy and take the three for a moonlight drive. It was all very pleasant, but they would have been strangely wanting in natural curiosity if no question of his motive had occurred to them.

Kitty was the first to take alarm. Was he falling in love with Margaret? That would be a calamity indeed. In her usual impulsive style she appealed to her mother.

"O mamma! don't you think Mr. Archer ought to know about Henry?"

"Why?" asked her mother.

"Oh, because it would be such a misfortune if there were any misunderstanding."

"My dear, I think you had better not recall to our memory the days when you were sometimes called meddlesome Kitty—"

"Mamma! how can you?" said Kitty, indignantly. "I don't mean to be meddlesome, but anybody might fall in love with our Margaret."

Mrs. Anderson made no reply, and Kitty chose to feel that the responsibility rested upon her.

A few days after, she took the matter in her own hands. Mr. Archer was in the parlor with her in the afternoon, while her mother was giving directions to a boy who was mending the garden gate. It was her opportunity. She took the photograph album from the table and began turning over the leaves, enlightening Mr. Archer as to the names of the different individuals.

Inconsistent Kitty! Often had she declared that this was the most idiotic thing any one could do by way of entertaining a guest. But it was not for the pleasure of saying "This is Cousin Sarah; that is Uncle John," that she had undertaken her task; she had a deeper design.

"What a fine face!" said Mr. Archer, as she turned a page and showed a cabinet picture of a young man, seemingly about twenty-five years old.

"Isn't it?" exclaimed Kitty, enthusiastically. "And he is just as good as he looks."

"Is he a particular friend of yours?" Mr. Archer asked, with a smile.

"Oh, no, not of mine; he is Margaret's special property."

"Indeed!" said Mr. Archer, and there was no semblance of agitation in his manner such as Kitty had half expected, wholly dreaded. "Where does he live?"

"He is up in Washington Territory, where he has taken up land and is working desperately to make a home for somebody."

"It is no secret, I suppose?"

"Oh, indeed it is, then; and for goodness sake don't say I told you," said Kitty, springing up and shutting the album.

Mr. Archer laughed, but Kitty thought it was from amusement at her quotation. She did not guess how easily he had seen through her little transparent trick and divined its motive.

Everything must have an end, and at last Mr. Archer broke in upon this pleasant state of affairs by declaring his intention of taking a trip to Alaska. The steamer was to sail in three days, and his passage had been secured.

"You will come back again before you go East?" asked Kitty anxiously.

"Oh, yes, unless something unforeseen occurs. I shall not say good-by yet."

"We will want to hear all about your trip. I am sure it will be delightful. I wish I were going, myself."

"I wish you were," said Mr. Archer.

Somehow it was Kitty who did most of the talking.

Mr. Archer went, and then the three women found what a change he had made in their quiet and monotonous existence. Now that he was gone, they missed him greatly. Kitty openly bewailed his absence, declared that everything was flat, stale and unprofitable without him; wished he had never come at all, because it would be still worse when he was gone forever; and much more in the same style.

Mrs. Anderson said little, assented to much that Kitty said when called on for an opinion, and was quieter and graver than usual, as she well might be when the association with an early friend had recalled all the losses and sorrows of the intervening years.

Margaret alone was unruffled. Her life's inner current had not been disturbed by Mr. Archer's coming or his going, and she went about her daily tasks as serenely as ever.

The weeks rolled by, bringing back their friend at last from his northern trip. He could not have asked for a warmer welcome, and his pleasure in returning was equally obvious. He came in and spent the evening as usual, giving a most interesting account of the land of wonders he had visited.

But Kitty was in despair; she had promised to be bridesmaid for a friend in San Francisco and was to leave the next morning.

"I thought I would be back before your return," she said, "or I would not have agreed to go."

Mr. Archer smiled a little sadly.

"When you are as old as I am, Kitty, you will know how true it is that 'happy days of the same kind never return.'"

"Oh, please don't say that," said the girl, her eyes filling with tears. "Why should change come over everything that is pleasant? You will not go away till I come back?"

"Not if I can help it."

And Kitty, confident in his ability to bend circumstances to his will, was content.

The next evening, as Margaret was locking the door of the postoffice, she saw Mr. Archer come out of her mother's house. He waited for her till she crossed the street.

"Will you walk with me down by the creek for a few minutes, Margaret?" he said. "I want to have a little talk with you all to myself."

There was something undefined, a sort of subdued excitement in his manner, that the girl felt in spite of his half-playful words. What was coming? Was it anything about Kitty? She could not guess.

They walked along the path that led past the gardens of the village houses to the banks of the little stream. It was quiet and pleasant there under the branches of the overhanging trees, a kind of "lovers' walk" where it might well be that more than once the old sweet story had been told to willing ears. Had not Margaret herself certain memories connected with the spot? She could find nothing to say, but waited for her companion to speak.

He found her a seat on the trunk of a fallen tree and sat down beside her.

"I will not keep you in suspense," he said gently. "My story is not long to tell. I hope it will not surprise you greatly. I have been with your mother this afternoon and have told it to her first. I have asked her to be my wife."

"Mamma—" Margaret's intense astonishment could find no other utterance. The hot blood rushed to her cheeks, the world seemed turning upside down. But Mr. Archer remained quiet and self-possessed.

"Yes," he said, "and it is her wish that I should tell you. We have both had our youthful dream, the romance that does not return to any of us. We do not expect to recall it. But I think we can be happy together. Margaret, it is much to two old people that they share the same memories and associations."

The wistfulness in his tone went to her heart, and she tried to recover herself, but only succeeded in saying, "I did not think—"

and then she began to cry.

"Shall I tell you what she said? That she

could take no step which could possibly make any alteration in the love and confidence which have always existed between her and her children. It is my own feeling. Not to break up the happy home life I have found so pleasant, but to share it, perhaps to lighten some of its cares, has been my wish. I found it so sweet that it was hard to tear myself away. I went to test my own heart. I have come back knowing that there is the possibility of a happiness for me such as I have never known."

Margaret raised her head; she looked into the kind, honest eyes that were fixed on hers, and held out both her hands in full recognition of his worth.

"Dear friend," she said, "you will never come between my mother and her children. Her happiness and yours shall be ours."

He walked back with her to the gate, but left her there; and when he came in, later in the evening, it was wonderful how easily the new relation was accepted and plans for the future began to develop themselves.

It was soon settled that there was to be no long delay. Mrs. Anderson would go to San Francisco to make some necessary preparations, keep Kitty there with her, and be joined by Margaret in time for the marriage, which would take place at the house of a friend.

Mr. Archer left two days after without any suspicion of the true state of affairs getting abroad; nor was Mrs. Anderson's visit to the city supposed to have any connection with his movements.

But Kitty was not to bid adieu to Reedstown without one more mischievous prank. The time soon slipped by, and Margaret, appointing a deputy to fill her place for a few days, went away also.

To this deputy there came soon after the following note:

Dear Mr. Clark: My sister desires me to inform you that she will resume her duties on Friday.

Very truly yours,

KITTY ARCHER, nee Anderson.

What conclusion was possible except the obvious one that Kitty had married the stranger who had been staying in Reedstown? The news spread quickly through the little village and caused great scandal as a matter of course. "A man old enough to be her father!" "How could her mother allow it?" "Money must be at the bottom of it," and so forth, and so forth.

But on Thursday the stage drove up to the cottage opposite the postoffice, and out of it got Margaret and Kitty, and no one else; and the city papers arriving by the mail contained the announcement of the marriage of Thomas Archer and Mrs. Margaret Anderson.

"Dear me!" said Kitty, innocently, when questioned, "what could make any one run away with such an idea? Mr. Archer has legally adopted me so that we can all have the same name; that is the whole explanation of the mystery."

Margaret returned to her duties as postmistress. In all the discussion of plans for a trip to the East, for a winter in Honolulu or a summer in Europe, she had taken little share. There was some one else to be consulted; she knew intuitively what would be said to her in the next letter from the north:

Surely you will not ask me to wait longer, my Margaret. The log cabin is wide enough for you and me, and I am not afraid to have you share all the work and all the joy there will be for us in building our home together.

So it was that when Mr. Archer and his wife returned they found Margaret's plans somewhat at variance with theirs. But they could not object. They waited a little longer in Reedstown, and there was a wedding in the cottage before they took Kitty (wild with delight) to visit the old home in Vermont on their way to England.

"Did I not tell you," exclaimed that young lady on the last evening they all spent together—"did I not tell you, Margaret, that I would find some romance in the dull routine of the postoffice? But who could have guessed what it was to be? I think you all owe me a vote of thanks for interfering on a certain occasion with the correspondence of the postmistress at Reedstown."

No! Thank You.

Mr. Perry was an old Southern gentleman, exceedingly polite. He would go out of his way at any time to avoid offending a neighbor or a friend. One day a neighbor met him on the street with "Hello, Mr. Perry, I was just going in to take a drink. Come in and have something."

"Thank you, Mr. —, I don't care for anything," was the answer.

"But come in and take something, just for sociability's sake."

"Now, I want to be sociable, but I can't drink with you."

"All right, if you don't want to be sociable, I'll go without drinking," growled the friend, and he silently walked along in the direction in which Mr. Perry was traveling.

Presently the pair drew near a drug store, when Mr. Perry broke out with: "Mr. —, I'm not feeling at all well to-day, and I think I'll go in this drug store and get some castor oil. Won't you join me?"

"What, in a dose of castor oil?"

"Yes."

"Now, I hate the stuff," and a shiver went over the man as visible in its effects to Mr.

Perry as if the ague had seized him on the street.

"But I want you to take a glass of oil with me, just to be sociable, you know."

The friend still refused, when Mr. Perry said: "Your sociable whisky is just as distasteful to me as my sociable oil is to you. Don't you think I've as much reason to be offended as you have?" They heartily shook hands. The dialogue was circulated in Covington, and Mr. Perry was never invited to drink again.—*Cincinnati Times-Star*.

The Teacher Taught.

[Written for the RURAL PRESS by CARL.]

Do we but bend an ear to list God speak;
Each day He sends will blaze an aye-truth grand.
This, mine to-day, forced home with God's firm hand!

As you may tell some dear aged one, weak
Through many cares, whose troubled brain sees bleak
Dark shades bend down, that while to understand
Some deeds of yours she cannot now command
Clear sight, all yet is well and faith must seek
To trust the sounder mind, nor fear the end.
So whisper, God, to each blind, weary child.
Light may not sound His aim, nor judgment blend
With His, and fears may almost force us wild.
Yet He is just, and faith must apprehend
His love as vast is now as when He smiled.

The Passion of Fear.

The following excellent and practical essay by W. M. Smith appears in the *Woodland Democrat*:

Fear, or dread of evil or danger, is a passion all mankind are more or less subject to; with some, however, it exists habitually in a great degree, giving rise to disease and various unpleasant symptoms. With many persons, a sudden attack of fear causes fever, fainting, diarrhea, convulsions, mania, and even sudden death. The influence of fear varies with different persons; many become quite talkative, some very silent, and others, again, become restless, moving about from place to place constantly. Instances are recorded where violent fight has produced immediate idiocy, where the hair has been suddenly changed to a white color and even where its vitality has been destroyed so that it fell from its roots, leaving the head bald. Paleness of the countenance, a suspension of all the vital functions, tremor, a momentary paralysis of the nerves of sense, etc., are usually present among those who become suddenly affected with fear. All these effects are caused by the greater or less degrees of depression of the vital powers which invariably accompanies this passion.

During fatal epidemics, there is no doubt that more persons suffer and die from the effects of fear than would were the passion unknown. In the season of Asiatic cholera, I met many persons in whom all the symptoms of that epidemic were produced solely by the debilitating influence of fear, and have no doubt that many practitioners have met with similar instances. Persons who are undaunted in some situations may be extremely fearful in others; thus, many have a fear of remaining in the dark; some experience fear only in a thunder-storm; others have a fear of ghosts, or sailing on the water, or riding in the cars, or on horseback, etc. But these are apt to be owing to an improper education during early life, or to unpleasant mental associations.

The subjection of this passion is a very difficult task. Persons who are subject to it may, however, overcome it to a great extent by keeping a careful and constant watch upon themselves, endeavoring to cultivate a disposition to retain presence of mind under all circumstances, and to check the first manifestations of fear, and also by the exercise as much as possible of mental fortitude. These measures, aided by a correct training of the reasoning powers, will frequently subdue the passion completely even when it exists in excess.

In the education of children, parents, guardians and teachers should be extremely careful never to adopt means of punishment which will call this passion into existence; cowards are made by the tyranny of teachers and parents over the young. The truly brave seldom commit crimes, but he who calls the passion of fear into action among children is manufacturing for the country both cowards and criminals.

"CHIC" AND SLANG.—To be "chio" in conversation is an attribute much admired in either the man or woman of society. A generous sprinkling of slang is permitted to enliven the small talk of the hour, and a new phrase that is suggestive is welcomed with positive delight. The latest that falls on the ear with somewhat odd effect is "All in the soup." The expression is an elongated form of the hitherto popular "left." The unsuccessful suitor, the defeated political candidate, the "exploded" financial venture, the overturned market-basket; in short, mishaps and disappointments of all kinds are described as "All in the soup." The phrase, which is claimed to be novel, savors strongly of the old-fashioned "pickle" into which the good dames and sires of long ago used to be thrown, descriptively, in cases of discomfiture, or the "stews" by which they expressed their hot moments of anxiety.—*Table Talk*.

THE EYE.—It is said that a fatigued eye recovers last the perception of the color by which the fatigue has been induced, and first recovers the sensitiveness of the complementary color.

YOUNG HOLKS' COLUMN.

Queen Mabel.

[Written for the RURAL PRESS by MAUDE S. PRASLER.]

"Green, green are the meadows,
And blue is the sky,
And glad is the morning,
And happy am I."

Out in the fresh morning air among the sweet green grass thickly dotted with white daisies, a little girl sang this gay song.

The cottage where she lived, with her father and old grandmother, stood near by, and the dew was still on the red roses climbing over the door.

The air was sweet and the sunshine made Mabel's hair glisten like gold. Her blue eyes were full of happiness, and she envied no one.

Just then she heard a carriage rolling along the highway, and presently the Queen passed by. She had heard Mabel's song, and she sighed, saying:

"Ah! how happy and light-hearted she is—with the birds and the bees and the blossoms about her! Would that I were as free from care and pain."

But Mabel saw only the glitter and the royal splendor. All the sweet light faded out of her eyes, and she felt only envy for the grand but lonely Queen.

The day that had begun so happily held no more pleasure for her, and she went in the house away from the sweet song of the birds, and the smell of fragrant flowers.

"What a wretched place this is to live in!" she murmured. "I never noticed how plain it was before."

And as she went about her simple daily duties, she grumbled:

"Little work of this sort the Queen ever needs to do. She would never deign to ruin her soft white hands with the dirt of the kitchen."

In the afternoon she fretted over her sewing, and thought of the life of ease the Queen led.

That night she tossed on her little bed, and thought what a hard lot hers was. She could never be a queen, and she was very unhappy.

She finally fell asleep, and was sure it had been but a few minutes, when she heard the sound of wheels, and running to her window, saw the Queen's own carriage standing before the door. A footman had brought a message to her and from the Queen.

Without a word to her father, she entered the carriage and was driven away. She leaned back on the cushions with never a thought for the birds or the sunshine; she was trying to imagine she was the Queen herself.

When they reached the palace, they led her through a splendid hall, to where the Queen awaited her. The people about her looked curiously at Mabel, and she was rather frightened, at what she did not know.

The Queen stepped down from her throne, and taking Mabel by the hand, said: "Would you like to become Queen in my place, my child? I am very weary of the splendor, and would like to go and play among the birds and flowers as you were doing yesterday."

Mabel's eyes sparkled and she clasped her hands in joy.

"Remember," said the Queen, as she put off her golden crown and laid it at Mabel's feet, "remember, you can never go back."

But Mabel only smiled at the idea of ever wanting to go back to the soot and grime of their little kitchen.

The Queen said "Farewell" to her people, and though all looked regretfully after her, none followed, but all turned eagerly to Mabel, and leading her to the golden throne, put the crown on her head. It was so heavy she thought she could never wear it, but when they brought her the robes of purple and ermine she forgot the weight.

Then the people all shouted:

"Hail to thee, fair Queen Mabel!" and the cry rang in her ears whenever she went outside.

One day, when she was weary of it all, she thought of her father, and wondered if he missed his little Mabel.

"There will be no one to bring home the cows," she said, "and no one to make father's toast and cup of tea." But some new pleasure took her attention, and she only said:

Why should I worry about the cows or a bit of toast? Am I not the Queen?"

Time passed on, and each day brought new joys. All she had to do was to command and she was obeyed. She never tired of roaming through the rooms of the beautiful old palace. Whenever she went to ride, the people cheered for her, and the little children threw blossoms under her horses' feet.

One evening, however, when the palace was ablaze with light and the sound of music and dancing floated out on the air, a beggar stood looking in at the window. He clenched his hand and shook it at the merry crowd.

"See," he cried, "how they rejoice while my little ones at home are starving for bread. What right have they to be gay?"

And the people all about him took up the cry, "What right, what right have they to be gay?"

Then, seizing clubs and stones, they rushed headlong into the palace.

The courtiers, mad with terror, fled, leaving Queen Mabel all alone.

She cried in vain for help, and as the furious mob crowded nearer the throne, she threw

away her golden crown, and the heavy purple robe, and ran out of doors.

Away, away she ran, out of the city and into the green woods. Soon she saw that she was coming near her old home. How fresh and sweet the roses looked; but as she touched them, their petals drooped. She called to the little birds which used to eat out of her hand, but they would not come.

She came to the little cottage by the roadside. How cosy and home-like it looked. The old grandmother sat by the door knitting. Queen Mabel could see she dropped her stitches, and holding out her hand, she said:

"Grandmother, let me take them up for you."

"No, no, gracious lady," the old woman replied, getting up to drop a courtesy.

Just then a man in working clothes entered the door, and poor Queen Mabel cried:

"Father, don't you know me?"

But the poor man only looked puzzled and said:

"O gracious Queen! have you seen anything of our little Mabel? She strayed away from us one summer morning long years ago, and has never been heard of since."

Poor Queen Mabel burst into tears, and—awoke to find herself in her own little low-ceiled room. She sprang from her bed with a cry of joy, and as she dressed she sang her simple song:

"Green, green are the meadows,
And blue is the sky,
Glad, glad is the morning,
And happy am I."

Grass Valley, Cal.

"How It Happened."

[Written for the RURAL PRESS by E. C. L.]

The day was cold and windy; great dark clouds hung over the meadows like an immense curtain. Mother had warned me of the impending storm, and asked me, as a favor, to remain at home; but I was restless and wild to have a run down to the creek and watch the swift, rushing stream of water that came from the mountains above.

In the springtime it was there that I watched the flowers bloom and watched the birds build their nests. I had my little bough overhanging the edge of the waters, where I would swing for hours at a time reading, sketching or sewing.

When the autumn came on it was as dear to me as ever, for I knew it would not be long before the pretty red, yellow and brown leaves would drop from the branches and slowly decay on the ground. Everything would be black and deadlike in appearance—everything but the mad stream that flowed beneath, that I never tired of watching from my bough.

Was it any wonder that I longed once again to swing there and meditate?

As I rushed from the house I threw my shawl around my head and swiftly vanished from sight. Over the brow of the hill I went, scattering the dead leaves with my feet and not stopping until I swung myself, with a bound, on to the seat of the limb.

The wind moaned and whistled as it struck the branches of the trees and seemed to harmonize with the rushing sound of the stream. I did not shiver or draw my shawl around me, but heated and excited by my run from the house, I pushed and swayed the limb with all my strength, when—snap, and down—down into the stream I went. I struggled and fought with the water that was slowly but surely carrying me with it. It wasn't deep, but the swiftness of the current, and being half stunned by my fall, prevented me from gaining a footing, and I went rolling over and over in the water. I caught a glimpse of my favorite tree as I was carried around the bend of the creek, and giving one plunge, managed to get nearer to the bank, when I grabbed an overhanging limb. Every minute I expected it to give way under my weight, but it proved to be strong enough to stand it.

I climbed the bank, and wrung my skirts out, and set on the bank until I could catch my breath. I had bruised my hands, but being half frozen, I paid no attention to them.

What would mother think? My garments were wet and muddy; my hair in a mat around my face.

What would she say?

I determined to creep into my room and not be detected by any one. I managed to take a roundabout path to the house, and once there, I reached my room by a side door.

The rain was falling in great torrents now, and I gave a shudder as I pictured myself in the stream.

I looked as usual when I followed the rest to supper, but father said: "Madge, I am very sorry, but I think your favorite bough has been broken by the wind. I had occasion to pass there before dark and I noticed it. I found your shawl on the bank, so suppose you have been down there and have seen it for yourself."

I blushed crimson and only answered: "Yes, I saw it." Not saying that "I felt it."

San Francisco.

KNEW HIM TOO WELL.—At one of the cross-roads in Brazil, an idol carved from the wood of an orange tree was placed for the Indians to worship. On one occasion it was noticed that an old redman omitted to perform his act of obeisance. On being commanded to kneel he stubbornly replied: "No; I knew him when he was an orange tree."

GOOD HEALTH.

THE SCIENCE OF DIGESTION is just now being discussed in the English papers in a light quite different from the generally accepted theories in this country, as may be seen from the following which we clip from London *Iron*: The fallacy of "plain living" has long been exploded, and it has been proven that the stomach never performs its duty so effectually as when called upon to act upon a variety of food, provided, of course, that the food is well cooked. The popular opinion now is that a dinner consisting of three or four varieties of solid food is more easily digested than the meal which is confined to one sort only. The old-fashioned notion of a single joint and a simply-made pudding is pronounced to be a fruitful source of indigestion. On this subject Dr. Geo. H. Taylor says in the *Sanitary News*: "Ready digested and easily digested foods are the abomination of dietetics; they prevent normal incitation of the digestive organs, necessary for normal secretions; they encourage a false notion that nutrition can be assured without reference to expenditure or to providing any use for nutritive material, and thus are liable to cause unnatural, irregular, unmanageable increase of the unstable ingredients of the organism, which react injuriously upon the digestive secretions, especially those of the liver. The prevalent recourse to these presumably enforced methods of nutrition are, in short, a violent and abnormal reaction against the former prevalent reign of physis, depletants and so-called alteratives. These old methods actually provide modes of disposing of unused nutritive supplies, although they be morbid modes."

THE CURE FOR HEART NEURALGIA.—Angina pectoris (agony of the chest) carries off many people, one of whom, according to the newspapers, was the novelist, the Rev. E. P. Roe, who expired in one day because of its crushing anguish. Major-General George B. McClellan, according to the published reports of that time, likewise succumbed after 24 hours of uncontrollable pain. Just how these patients were treated I am unable to say, but Dr. Richardson of London, long before General McClellan's death, had received a prize of 25,000 francs from the Academy of Medicine in Paris for having discovered an almost infallible remedy for angina pectoris by the administration, in small doses of 1/100 to 1/25 of a grain, of nitro-glycerine! This discovery entitles Dr. Richardson to the never-ending gratitude of every suffering man, woman or child afflicted with angina pectoris. I know a number of persons who always carry tablets of nitro-glycerine with them, and I am equally certain that all these people, by the use of nitro-glycerine, are living in comparative comfort, who would otherwise have fallen under the insupportable torture of that form of heart neuralgia, the most dreadful of all pains.—*N. Y. Graphic*.

YELLOW-FEVER GERMS.—In our last issue mention was made of the character and appearance of the yellow-fever germs. Since then we have learned that Prof. H. J. Ditmer of the Ohio State University has succeeded in photographing the germs as found in the human tissue. His description of them is much the same as given in our last issue. We quote from the *N. Y. Sun* as follows: The bacilli present themselves in four forms: The first is a plain, dark, round mass; the second, an oval, with a dark point at each extremity; the third an oblong disk, with dark points, as in the second; and the fourth, two dark points united by a film and strikingly resembling a dumb-bell. The professor says: "Dr. Sternberg of Johns Hopkins University for a number of years has made exhaustive search for yellow-fever germs, but without success, in the tissues. During the last epidemic he made several post-mortem examinations at Decatur, Ala. Liver and kidney tissue of two persons, at least, were sent by him to Dr. Reeves for the purpose of mounting for microscopic purposes. I have several negatives, each of which is good. Some show the bacteria singly, others in masses, with the capillaries distended with them."

DANGER TO LIFE.—If there be any possible danger to life and property that cannot be overcome by man's ingenuity, it has yet to show itself. The deadly elevator has at last been rendered innocuous by means of an air cushion. If it breaks loose at the tenth story, or the fifth, it is received on this cushion so safely that no harm can be done. The *Scientific American* tells of an experiment where an elevator, weighing 2300 pounds, equipped with plate-glass mirrors and loaded with baskets of eggs and goblets, was cut loose and allowed to shoot down 80 feet. The air-cushion received the elevator with so much ease that not a drop of water was spilled or an egg broken. The pressure at the point of concussion was 60,000 pounds.

THE DIPHTHERIA MICROBE.—The *Figaro* says the professors connected with the Pasteur institute have succeeded in identifying the generative microbe in diphtheria. The discovery in a preventive form of a vaccine virus is expected.

CITY AND COUNTY BRED FOR ENDURANCE.—It is stated that during our civil war city-bred men stood long marches better, were subject to less disorders, and recovered from gun-shot wounds more readily than country-bred men.

The Week.

The all too beautiful weather continues and the weather bureau on Wednesday afternoon promises nothing but fair skies for California. As we go to press, however, the wind is blowing 60 miles an hour outside the harbor, and it is possible that some sort of a disturbance of the elements is foreboded. A good thorough soaking is eminently desirable, for the markets, which are always sensitive, are beginning to assume dry-weather values. There has been a grand area sown, and there is still time to insure a grand harvest, but such weather as we have been having, delightful as it is, does not guarantee great produce.

Delightful winter fairs, denominated citrus because of their chief feature, are in progress as we write in San Jose and San Bernardino, thriving towns in thriving neighborhoods, one in Central and the other in Southern California.

At both fairs there is a profusion of produce embowered in flowers and foliage—characteristics of the California winter. There should be more of these winter fairs. They are more delightful to read of than ice palaces.

The last act in the national election was consummated on Wednesday. As we go to press the telegraph announces that in joint session of the House of Representatives and Senate the electoral votes of the different States of the Union were formally counted, and Harrison and Morton were declared elected President and Vice-President of the United States for the period of four years from March 4th next.

The Secretary of Agriculture.

One object for which the Order of Patrons of Husbandry has contended for years is accomplished, and as we write a special representative of the great agricultural interests of the country sits among the constituted advisers of the President. It is a happy consummation of an exceedingly proper movement—a movement which commended itself to intelligent, candid minds, but which of course required years of patient and persistent pushing to accomplish. Such is the history of all reforms, and those who labored so long and zealously to win for agriculture its true place in the popular mind can take new assurance in the justness of their cause and new confidence that they labored in the public interest and not in the interest of any single class. For there are industrial interests so far-reaching in their influences and so beneficial in their results that those who labor in them labor not alone for themselves, but for all mankind. Such is the agricultural interest, and the people of the United States have honored themselves as a whole as well as the farming element, by the recognition implied by calling of a Secretary of Agriculture to the President's Cabinet.

There is another consideration which pleases us, and that is that the name which will go into history as that of the first Secretary of Agriculture of the United States will be Norman J. Colman. Col. Colman, as we have frequently remarked, has distinguished himself as the most energetic and efficient Commissioner of Agriculture we have had since the Department of Agriculture was created. Never has the Department shown such a grasp of the situation and intimate acquaintance with the needs of practical agriculture as during Mr. Colman's administration. It has commanded respect from the people and support from advanced thinkers and investigators. Instead of the butt of ridicule and target of obloquy which was the position of the Department a decade ago, it has, during the last few years, commanded honor and esteem. This has, of course, been in part due to the force shown by the Grange and other agricultural bodies in demanding the elevation of the Department, for the work of their representatives in Washington has shown deep and wide power from the very beginning. But it is also a fact that the reform just accomplished would have been more difficult and have required longer time, had a weaker and less wise man than Mr. Colman held the Commissionership while the movement was in progress. Being thoroughly allied with the Grange, and at the same time showing forth by his daily work the importance of the interest which called for recognition, Mr. Colman's incumbency of the Commissionership was of much aid toward the desired end. These facts give us satisfaction with the choice of President Cleveland in inviting Mr. Colman to a place in his Cabinet.

Although we paid our respects to the new Agricultural Commissioner in 1885 and spoke of the chief facts of his history, the place he now occupies before the country warrants a brief reference to them and the reproduction of his portrait, which was the best we could secure at the time. Norman J. Colman was born at Richfield Springs, N. Y., in 1827. He was a teacher in early life, studied law, and at last settled at New Albany, Ind. While there he was the business partner of Hon. M. C. Kerr, who afterward became Speaker of the United States House of Representatives. About six years before the war broke out, Mr. Colman removed to Missouri, where he bought the *Valley Farmer* in St. Louis and changed its name to *Colman's Rural World*. It is still published, and is authority on farm and gar-

Hon. Norman J. Colman.

den matters throughout the Southwest. Mr. Colman is a man of mark in Missouri. He has been for several years president of the State Press Association. During the war he was a Union man and Lieutenant-Colonel of a militia regiment. He has been a member of the Legislature and Lieutenant-Governor of Missouri. He was the originator of the State Board of Agriculture and the founder of the Missouri Horticulture Society. He was appointed Commissioner of Agriculture in March, 1885.

We are sorry Mr. Colman's tenure of a Cabinet position will be short, for the political earthquake of March 4th will throw him from his seat along with the others of the Cleveland administration. But the fact is accomplished; the new chair in the President's Cabinet has come to stay. It will be perfectly easy for President Harrison to fill it acceptably to himself and to the country. The country is full of wise, honest and broad-minded farmers, and one of them should hold the place. Already three distinguished Grangers have been prominently mentioned for the place and endorsed by the State Granges of their respective States, viz.: Ex-Gov. Robie of Maine, J. H. Brigham of Ohio, now Master of the National Grange, and J. J. Woodman of Michigan, who was for six years at the head of the National Grange. With such fit material available, and others of like ability and loyalty to the agricultural interest to choose from, President Harrison need not err in his selection.

Bovine Tuberculosis.

The prevalence of this disease, and the imminent danger of its communication from bovine to human species, were forcibly commented upon in the *RURAL* some time ago. It seems that the city veterinary inspector, Dr. Egan, is destroying many consumptive cows. He recently condemned 11 cattle out of a band of 17 which came from San Mateo county. This makes upward of 40 which have been seized since the beginning of the year. They were all suffering from tuberculosis, and the doctor is of the opinion that the dairies are making a wholesale endeavor to run the chances of avoiding the vigilance of himself and his assistants.

It seems that a question has arisen as to the ownership of the carcasses of the condemned cattle. Charles Alpers, the contractor for the removal of dead animals, claims the carcasses of all cattle which may be condemned and killed. Their owner, however, disputes the demand. City and County Attorney Flournoy will decide the question. We should think the official collector of dead dogs, etc., could as well claim the flesh of animals slaughtered in Butchertown. Of course, if the owner should try to sell the flesh as food he should be arrested, but that is the work of the meat inspector, not of the dead-dog man.

A HIGH-JOINT COMMISSION.—The telegraph announces that Governor Humphry of Kansas has selected St. Louis as the place and March 12th as the time for holding the Interstate Convention to investigate the alleged beef and pork trust. The convention will be composed of joint committees from the Legislatures of Kansas, Nebraska, Missouri, Ohio, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Arkansas, Texas, Colorado, New Mexico, Arizona and

Wyoming. The Governor of Pennsylvania has expressed a desire to have that State represented, although Pennsylvania was not invited to join the movement.

A Fine Japanese Orange.

We give our first page this week to an attractive engraving of a variety of orange which is now being largely planted in this State, and so far as can be now foreseen promises to be a well-adapted and profitable fruit. It is the Onshiu or (as Prof. Van Deman, the Government Pomologist, decides it should be called) the Satsuma orange. Our engraving is drawn from photographs taken of the actual fruit-bearing branches for Mr. H. E. Amore, of the Japanese Tree-Importing Company, during his last summer in Japan. Mr. Amore has done much to distribute this fruit in California, and has made considerable plantations of it in joint interest with land-owners, thus showing his belief in the fruit as a thing to plant as well as a thing to sell.

To show that this variety is worthy the attention of orange-planters, we quote below the results of investigation made by Prof. Van Deman, as printed in the Report of the Department of Agriculture for 1887:

Satsuma.

From the best authority I have at command, this variety came from Japan to the United States about 1876. It has been grown in Florida since that time and is there known as the hardest of all oranges. It is named after the province of Satsuma, in Japan, where it is largely grown.

At a later date it was brought to California. Recently thousands of trees of this variety have been imported from Japan by several firms in California under the name Unshiu (or as some have it, Onshiu, to better indicate the pronunciation), which may be a common name for it in Japan. But as Satsuma has been applied to it in the United States for many years previous to these later importations, it seems best to give the last name the preference. Having examined and eaten the fruit sent directly to this office from Japan, that imported and sold in California, and having also gathered specimens with my own hands from the trees in that State under the name Unshiu, and also having received it from many places in Florida under the name Satsuma, I am fully convinced that all these samples were of the same variety.

The tree is described by my Japanese correspondents as spreading and dwarfish or even bushy in habit, very productive, and with broad leaves like ordinary oranges. This accords with what I have seen in California and what is reported to me from Florida. It is of the class to which the title "mandarin" is applied, because of its small size, flat shape, and very loose skin, which are characteristics of that class.

Size, small to medium, two to three inches; shape, flat, a little pointed next the stem; color, bright orange; skin, rough, wrinkled next the stem, very loose and easily separated from the flesh; core, almost none, but instead a cavity often three-eighths inch in diameter in center; seeds, almost wanting; flesh, orange color, darker than the skin, not so juicy as some; flavor, very sweet, rich, very aromatic, peculiar; quality, very good; season, early.

Recognized Value of the Variety in Japan.

Well-informed Americans who have resided in Japan speak very forcibly of the value of the Onshiu orange. Prof. C. C. Georgeson of the Imperial College of Agriculture at Tokio, wrote to the *Orchard and Garden*, July, 1888, as follows:

"The Unshiu is perhaps the finest variety of the orange in existence. It is *par excellence* the queen of oranges in Japan, and it needs only to be known to be appreciated in America." Prof. Georgeson's description of the fruit agrees closely with that by Prof. Van Deman given above. He adds: "All other varieties meet with slow sale when they come in competition with fine Unshiu oranges."

In January, 1889, M. T. Georgeson wrote from Tokio to the same journal as follows: "The Japanese oranges are as different from our idea of an orange as they can well be, separating from the peel almost as easily as a grape, dividing into sections at the slightest pull, each section like a separate fruit, dissolving its pieces into your mouth with a flavor of cherries, leaving no pulp behind, very good, excellently good they are. They, the latest of her fruits, add the crown of excellency to the already overflowing cornucopia of this 'Beautiful Land of the Sunrise.'"

These few facts will add increased interest to the engraving, of which the most striking feature is of course the great prolificness of the tree, the splendid fruit hanging nearly as closely as it can stick upon the branches.

Artesian Wells.

In the PRESS of Feb. 2d was published an article on "The Requisite and Qualifying Conditions of Artesian Wells." There are other features connected with this interesting subject, not then mentioned, and which we shall now endeavor to place before our readers in a brief form.

Distribution of Wells.

In the employment of several wells their distribution is a matter of some consequence. The normal direction of flow, when it is once set up, by virtue of the opening of an avenue of discharge, is along a line drawn from the outcropping edge of the bed down its slope to the wells. Now, it is clear that if several wells are arranged along this line, the first one will be better placed than those which stand in its lee. These will be, indeed, measurably supplied by lateral flowage under the law of equal pressures, but less direct and freely. If the wells are disposed in a cluster, those on the exterior will partially cut off the supply of the interior wells. A more fortunate disposition than either of these would be an arrangement in a line at right angles to the direction of flow.

A still more advantageous arrangement, subject to local modification, would be to dispose the wells in a curved line, convex toward the collecting tract, for when the draft of the wells has made itself felt upon the sheet of water flowing most directly from the collecting belt to them, the higher pressure which the flanking portions still suffer will cause a lateral inflow, and the curved disposal of the wells will be more favorable for receiving the ingathering currents than a rectilinear arrangement, being more nearly normal to the resultant pressure and flowage.

In respect to the degree of separation of the wells, it is obvious that so far as the mere question of the greatest reception is concerned, the farther they are apart the better, for they will affect each other less; but, of course, practical considerations put a limit to their dispersion.

Figs. 1 and 2 exhibit tabular sections of strata, showing disadvantageous arrangement of wells. Figs. 3 and 4 are tabular sections, showing proper and advantageous arrangement of wells.

Control of Flow.

It is clear, upon consideration, that perfect control may be obtained by putting down a tube to the densest portion of the upper confining bed, if, by some device, the space surrounding it may be closed up so that no water can rise outside of the tube. Formerly this was done by a very simple and ingenious device known as the seed-bag, shown in Fig. 5. A long, stout leather bag is made in the form of a cylinder, open at both ends, and just the size of the well-bore. This is slipped on the lower end of the pipe, and the bottom of the bag securely fastened about the tube by wrapping it with marline. A thimble just above the tie will aid in preventing slipping. It is then filled with dried flaxseed and the upper end likewise closed around the tube. When thus adjusted it is lowered into the well to the point determined upon, and supported there until the seeds swell by absorbing water. This enlarges the bag so as to fit the bore tightly and shut off all water from rising outside the pipe, and so all is compelled to ascend through the tube to the surface, or at least as high as the pressure is competent to force it.

Fig. 5 shows the seed-bag; *a* is the delivery tube leading to the surface of the well and terminating below the seed-bag; *c* is a leather bag filled with dry flaxseed; *b*, marline wrappings to secure the end of the seed bag.

A better and more convenient, but more expensive, packing takes advantage of the expansion of the rubber disks when pressed together, instead of the swelling of flaxseed. A series of thick, washer-like rings of rubber are fitted about a section of pipe, so adjusted between iron disks that, after being put down, they can be screwed together, and so caused to expand laterally and completely fill the bore.

The construction of the parts and their adjustment are indicated in the accompanying figures (6 and 7), which illustrate one of the forms in use.

In Fig. 6 the rubber packing is shown apart: *a*, section of delivery tube extending to the surface; *b*, a large thimble into which *k* screws; *c*, an iron washer; *d*, a set of rubber disks fitting on *k* between *b* and *d*; *k*, a section of pipe on which is turned a long screw, fitting in the thimble *b*; *d*, a disk forming the head of the screw *k*; *h*, a section of pipe extending about two feet below the packing; *i*, a spring to press against the walls and hold the pipe *h*, while the section *a* and thimble *b* are screwed upon *k*.

Fig. 7 is the rubber packing shown screwed together as it is in the well.

In a form employed in the oil regions the expansion of the rubber disks, or single cylindrical one, is accomplished by pressing a conical hollow wedge between the pipe and the rings, thus forcing them out against the walls of the well.

In this case the packing is supported by a perforated tube, an "anchor," reaching the bottom

of the well. As the packing in an artesian well is often located near the top, the necessity for support from below excludes this form in most cases.

Detection of Flow.

It has been remarked that the water may rise from the bottom to some higher portion of the well, and there find escape by passing off laterally through the upper strata. In absence of control the water does not always rise and overflow. It is a matter of some practical moment, therefore, to know when a stream is struck which may yield a flow at the surface when put under proper control. Such a stream usually discovers itself by a rise of water in the well, but this is not always the case. It is ordinarily desirable to test the capacity of any stratum which gives any suitable indication before sinking to a lower one.

Negative and False Tests.

1. It is possible, in perfect honesty, to make both a negative and false test. Suppose that two porous beds *A* and *B* (Fig. 8 showing a

ing the bed *A* unable to dispose of the entire flow. In this case there would be a rise of water in the tube, and, possibly, a flow. The mischievousness of a test of this sort lies in the fact that it appears to be a true test, because it shows some result, while in reality it is false and misleading. The true test in this case can only be made by placing the packing between the porous beds *A* and *B*.

2. Take another instance where two porous beds, as *A* and *B* (Fig. 9—a partial and misleading test), have been traversed. Let the packing be placed between these. Then (1), if *A* equals *B* in productive capacity, water will stand at the same height within and without the test-pipe if there is no leakage in the upper beds. (2) If the failure to flow was due to such leakage, then a flow will result from *B*, but the additional flow which might be secured from *A* is lost (see figure). (3) If *A* has a greater head than *B*, and if there is no loss above, the water in the test-pipe will actually be lower than that outside, as illustrated in Fig. 10. This may be said to be an inverted

Figs. 1 and 2.—Tabular Sections of Strata, Showing Disadvantageous Arrangements of Wells.

Figs. 3 and 4.—Tabular Sections of Strata, Showing Advantageous Arrangements of Wells.

Fig. 5.—Seed Bag. Fig. 6.—Rubber Packing, apart. Fig. 7.—Rubber Packing, together. Fig. 8.—Negative Test. Fig. 9.—Partial and Misleading Test. Fig. 10.—An Inverted Test.

Fig. 11.—Section of Strata and Three Wells, Showing One Correct and Two Erroneous Tests.

negative test), separated by an impervious layer, are traversed, and the testing of the first has been neglected, either because it failed to give encouraging indications or for other reasons. It is now desired to test these. Suppose the seed-bag or rubber packing be placed above the upper one. Now, if both bear a water level equally high, the test will be made, and the result will indicate their combined capacity; or if both heads are at least as high as the surface at the well, the test may be accepted. But suppose that the bed *A* has been cut into by erosion, or been reached by crevices, or is otherwise defective, while the other, *B*, remains intact and bears an elevated fountain-head. Under these conditions the water may flow from *B* through the bore into *A*, and escape laterally through it, as illustrated in the figure. Now, in this case the result may be simply negative or positively false and misleading. If the lateral leakage through the stratum *A* effectually disposed of the flow from *B*, and there was no leakage in the upper portion of the well, the water in the test tube would stand during the test at essentially the same height as before, and the result would be negative, failing to indicate a possibility that really existed. If, on the other hand, there was lateral leakage through the upper strata as well as through *A*, neither alone being quite competent to dispose of the flow from *B*, then the introduction of the test pipe would cut off the upper leakage, leav-

ing the bed *A* unable to dispose of the entire flow. In this case there would be a rise of water in the tube, and, possibly, a flow. The mischievousness of a test of this sort lies in the fact that it appears to be a true test, because it shows some result, while in reality it is false and misleading. The true test in this case can only be made by placing the packing between the porous beds *A* and *B*.

Take another instance, as in Fig. 11. This is a section of strata and three wells, showing one correct and two erroneous tests. These wells are assumed to be independent of each other, and are placed together on the diagram merely for convenience. In this out let *A* and *B* represent porous beds (Fig. 11), the lower of which is so conditioned as to drain the upper one by virtue of a lower outcrop. (1) First, if the drainage loss below is not complete, and if the packing is placed above *A*, as shown in Fig. 11, the result will be negative, if there is no leakage in the upper strata. (2) Should there be considerable loss there, it will be cut off by the tube and packing, and some rise in the tube will be the result in most cases. In either instance the result is misleading, particularly in the last, because the small rise of the water is

apt to allay any suspicion as to the effectiveness of the test. The real fact, however, remains that the flow from the productive strata is mainly lost below. (3) Suppose that the packing is located between *A* and *B*, as in Fig. 11, it will then shut off the flow from *A*, while that in *B*, because of a larger outlet, will fail to flow. Now, if there is opportunity for lateral leakage in the upper strata, the water from *A* will rise in the well outside of the test-pipe and pass off into these open upper beds. (4) But if no such opportunity is afforded, it may rise to the surface and overflow outside of the test-pipe, while the water within the test-pipe will probably be found to be lower than before the test was made.

The proper method of testing wells known or suspected to present these conditions is to sink a simple bag of seed or other obstruction to a point in the impervious stratum between *A* and *B*, which, when it tightens in its place, will shut off all leakage in the upper strata, and the full capacity of the water-bed *A* will be tested.

QUERIES AND REPLIES.

Rabbit-Proof Fences.

EDITORS PRESS:—We are quite interested in the valuable article on wire fencing against rabbits in your last issue. We are about building a rabbit-proof fence around a good deal of land, and are glad to avail ourselves of "Miramonte's" experience; but he does not give the width of the wire netting used. We had calculated on 2½ feet width, but from his remarks think, perhaps, two feet is all that is necessary, with the barbed wire at the top and bottom. We think that a valuable addition, and looping the netting occasionally to the barbed wire would add much to the strength of the fence. Will your correspondent kindly give the benefit of his experience about the proper width of the netting to use, and oblige us and many others.—I. H. FOUNTAIN, Riverside, Feb. 9, 1889.

EDITORS PRESS:—Replying to Mr. Fountain's favor of Feb. 9th, would say that the netting we use is two feet wide, and we consider it wide enough.

The suggestion with reference to looping the netting to the wire, I do not consider a good one, for the reason that it is liable to bring the wire and netting too close together.

One of the main points of excellence in the fence, as described by me, was that the netting and the wire should be kept apart. If they wish to additionally strengthen the netting at the top, let them stretch a wire at the top of the netting for the especial purpose of fastening the netting to it, but by no means interfere with the outside wire. The stretch between these posts is only 12 feet, and the netting will very easily carry itself that distance if properly put up. Anyhow, if they strengthen it with another wire, let that wire, whether plain or barbed, be placed on the same side of the posts as the netting for that purpose exclusively.—MIRAMONTE.

Bean-Growing.

EDITORS PRESS:—I would like to get some information on raising beans. Which is the best way to plant the Lima bean, in hills, drills, or broadcast; also the Navy and Mexican bean? Are poles used for the Lima bean? If so, how long ought the poles to be? What would be the best season to plant? I am located about 25 miles inland from the coast—elevation, about 2200 feet—average rainfall, 25 to 30 inches. We have considerable frost up to the last of March or first of April, after that, no frost till November or December. Will that kind of climate be favorable to bean-raising? and what kind of soil is suitable for them? Mine is a rich, sandy loam with a great deal of vegetable matter in it. I shall feel grateful to any one who will give me the desired information. Do beans need irrigating if planted on bottom land? Our last rain is usually in April, and no more till October or November.—J. PATINSON, Lamson Valley, Jamul, San Diego Co.

[We shall be very glad to hear from any reader who grows beans on the questions asked by our correspondent. Beans, considering their importance as a California crop, should be more frequently heard from.—EDS. PRESS.]

Experience With Rattleweed.

EDITORS PRESS:—In your valuable paper of Feb. 9th appears an article under the heading, "Is Rattleweed Poisonous?" In this article the readers of the RURAL are invited to give their experience with rattleweed.

I have a stock range of 1500 acres. Rattleweed was growing in places all over the range when I first came here in 1850, and has grown on it each succeeding season from that time to the present.

I have had horses on this pasture from 1850 up to the present time. For the first ten years I never saw or heard tell of a rattleweed horse—I call it crazy; I don't call it rattleweed.

My horses began going crazy. Some of my very gentlest, old, well-broken horses got so crazy they could not be led from the corral to the barn. At one time I had about 30 horses and mules too crazy for any use, except for grizzly feed.

For a period of 10 or 12 years I lost from one to a half dozen horses each year by becoming crazy. For the last eight years I have not had a single horse to go crazy, notwithstanding the same identical range with its rattleweed has been used every year; the same creek has furnished water for the range all the time since 1850.

Now, if it was rattleweed that caused my

horses to go crazy from 1860 to 1870, why is it my horses did not go crazy the first 10 years, or from 1850 to 1860? And why is it my horses have not gone crazy for the last 10 years? Plenty of rattlesnake all the time; horses ranging over it every day. I feel quite sure, and always have, that rattlesnake has nothing to do with the disease, for I believe my horses eat of it more or less every year.

The disease has always made its appearance here in the latter part of the summer and fall, when all vegetation on the stock ranges is dry.

I have never known an animal to become crazy while running on green feed, nor while being kept up and fed on hay or grain.

My opinion is that it is a disease of the brain and is incurable. I would rather find a horse of mine dead than find him crazy—for once crazy, always crazy, and at any time liable to kill or cripple whoever may be unfortunate enough to have to handle or work such a horse.

Winters. Yolo Co.

W. J. PLEASANTS.

ENTOMOLOGICAL.

Moths, Gnats and Skeeters.

With Other Important Information.

EDITORS PRESS:—I do not reside among the oak trees, but as I sometimes travel "up country" from the Pajaro river toward San Jose, San Francisco, Sacramento, and other places, I see the oak trees standing about like an irregularly planted old apple orchard; and they seem to be all old trees. In fact they are old; most of them very old. Why is this true? Do not these trees bear acorns, and is not the acorn the home of the seed of the oak tree? Do not these acorns fall to the ground, and is not this ground good for growing oaks on? If so, where are the young oak trees? Why do not the young oaks come up around the old oaks? These are several questions and it is proverbial that "one fool can ask more questions than ten wise men can answer," and yet there must be a convenient answer somewhere for all these questions.

One observer says: It is "bugs" in the acorns. She says it is two insects—a weevil and a moth. That the weevil first attacks the acorn and is followed by the moth; and I now remember to have seen in summer season about a million of yellowish-ashen colored moths flying around one medium-sized oak tree. Another citizen (which is a he) tells me he thinks it is the moth, because an oak tree, under whose branches his kitchen chimney sends up its nearly constant smoke, has young oak trees sprouting up around it every year, and he thinks that we are to argue from that—that the smoke keeps the moth out of the acorns of the tree.

What do you think about "dat ar"? One man don't take to the moth notion, and says it was the firing of the grass in autumn that isolated the old trees; but then there are many oak groves where no fire has run for the last 30 years and yet there are no young oaks in those groves; therefore, I can hardly accept the fire theory. And suppose there should be an occasional young oak, that does not account for what "went with" the other millions of oak-tree seeds in the acorns. I rather incline to think it must be the insects. And if so, is it not wonderful that so small and weak a thing as a moth should set metes and bounds to the growing of the giant oak? Verily, verily, I say unto you, "bugs" is wonderful. If I were inclined to be scriptural I should quote: "How shall the weak things of this world confound the great?" And this is not a question by the scriptural author, but an exclamation of wonder at the fact that such is the power of weak things.

From the earliest that we read of the Rocky mountains—called by Captains Lewis and Clarke, in 1804-5, the Rock mountains—the buffalo or bison seldom, if ever, crossed to the west of those mountains, albeit there is abundance of good buffalo feed between the Rockies and the Sierras. Lewis and Clarke tell us that the Shoshone Indians of what is now Eastern Idaho and West Montana were compelled, at the risk of being scalped, to cross the mountains for buffalo meat or starve to death; that was in A. D. 1805. The buffalo did not then cross the Rockies nor ever since. Is that beast afraid of a mountain? No. I have walked in his ancient trails where he used to cross the mountains in Virginia. In fact, the National road from the Atlantic seaboard to the Ohio river, practically followed the old buffalo trails across the mountains. What then was it that kept the buffalo to eastward of the Rocky mountains? I answer: "Gnats and skeeters." The nearer you approach westward toward those mountains the more numerous become the alkali flats with their accompanying little sandhills. In these sandhills breed myriads of almost microscopically small black gnats with silky white wings. These gnats, though small, are powerful—very powerful—and they are "pizen" to a buffalo. They get in among his long hair and set him "plumb crazy." And I assume, from some actual observation, the depressed places on the "plains across," commonly known as "buffalo wallows," will be found most numerous near the alkali country, or also near streams where mosquitoes abound.

Now, when one reflects on the vast herds of innumerable buffalo seen by Lewis and Clarke, and so recorded, 84 years ago, is it not wonderful that the route of the yearly journeyings to and fro, north and south, of these vast herds, should be directed by a miserable little gnat? There is a gnat called the "buffalo gnat," but I

do not think it is the same as the "alkali gnat" nor quite so venomous.

Let us take note of what a large contract the gnats once had in the buffalo business. The History of the Expedition of Capts. Lewis and Clarke says, under date of July 11, 1806: "They" (the buffalo) "at this season, are belching in every direction, so as to form an almost continual roar, which at first alarmed our horses, who, being from the west of the mountains, are unused to the noise and appearance of these animals." The expedition was then on its way home to St. Louis from the Pacific Coast, and these buffalo were seen on the headwaters of the Missouri river.

Again, "Saturday, July 31, 1806, during the whole night the buffalo were prowling about the camp and excited much alarm lest in crossing the river (Upper Missouri) they tread on the boats and split them to pieces."

"Sunday, August 1st." * * * The buffalo now appear in vast numbers. Such was the multitude of these animals, that although the river, including an island over which they passed, was a mile in length, they stretched, as thick as they could swim, completely from one side to the other, and the party (of the expedition) was obliged to stop for an hour." The river at that point, before it is split by the island, is one mile wide, so that there was a column of solid buffalo beef more than a mile square succeeding itself every minute for an hour. That scene must have meant meat.

Again, says this history, "August 29, 1806 (near the mouth of White river, now Lyman county, Dakota.) * * * These last animals are so numerous that from an eminence we discovered more than we had seen at one time; and if it be not impossible to calculate the moving multitude which darkens the whole plain, we are convinced that 20,000 would be no exaggerated number."

[NOTE.—These are but a few of the herds mentioned by Lewis and Clarke in the years A. D. 1805-6, the history of the expedition of many herds numbering from hundreds to thousands in each, and to-day, January 29, A. D. 1889, the American bison is extinct. Gone, gone, gone!]

Now about the gnats and skeeters. A mosquito is bad enough, but not so bad as the gnats of the alkali plains. You can scarcely see those gnats and you cannot feel the biting in their first work on you, when they are biting, but in a few hours afterward the external skin about your head, ears, eyebrows and whiskers becomes sore and irritable—you are tempted to rub or scratch, and the external layers of the skin peel off, to the red, in a thin, angry blister. Into this blister the gnat works daily, aided and abetted by his cousin, the mosquito, unless you tie up your head in a veil of very fine meshes or dope it with rank bacon grease; goose grease tinged with kerosene is good enough.

Lewis and Clarke call these gnats by different names, frequently denominating them "eye-gnats," and I assume that this name is given because the earlier noticeable work of the gnat to a "tenderfoot" is seen just in and below the eyebrows. But the "Expedition" does not speak—that is, not seriously—about gnats until it gets into the alkaline country along the upper portions of the Missouri river. Of course all along this river and its tributaries, when the wind and weather will permit, countless millions of mosquitoes are not exactly like angels on the wing. The mosquito, however, does not go very far out upon the treeless, naked, breezy plain, away from shade and water; but the gnat is found wherever alkali abounds, and that is nearly all along the more immediate eastern slope of the Rocky mountains. From the Pacific surf to the summit of the Rockies—some 600 miles—the "Expedition" records no complaint about gnats or mosquitoes, albeit they journeyed on the waters of the Columbia river in canoes most all the way; but just so soon as they turn the summit and start down the eastern slope, the complaints begin.

At a distance easterly of nine miles down from the most easterly summit they camp for the night, and make this entry in the journal of travel on the 7th of July, 1806: "We procured some beaver, and this morning saw some signs and tracks of buffalo, from which it seems that those animals do sometimes penetrate to a short distance within the mountains." [The italic business is mine.]

Now let us notice from this history how troublesome the gnats and mosquitoes were to the voyagers. On the way out there is constant cry about these insects, particularly the mosquitoes, as the party voyaged by water. Above the great Falls of the Missouri—now in Choteau county, Montana—July 13, 1805, * * * the mosquitoes and gnats persecute us as violently as below, so that we can get no sleep unless defended by biers (bars), "with which we are all provided." And thus it continued to the fountain-head of the Missouri; at which point, by the way, one of the men employed by the expedition, putting a foot on each bank of the little "spring branch," took off his coonskin cap and enthusiastically exclaimed: "Thank God, I've lived to straddle the Missouri river."

But it was on the return trip the insects made monstrous manifestations. At the Missouri Falls, July 15, 1806, * * * "We are now troubled with another enemy, not quite so dangerous as the grizzly bear, though even more disagreeable; these are the mosquitoes, who now infest us in such myriads that

we frequently get them into our throats when breathing, and our dog even howls at the torture they occasion."

At the mouth of the Yellowstone river—now Gallatin county, Montana—in camp "Aug. 4, 1806. The camp became absolutely uninhabitable in consequence of the multitude of mosquitoes; the men could not work in preparing skins for clothing, nor hunt in the timbered low-grounds."

"Aug. 5th, as they proceeded. On one occasion Captain Clarke went on shore and ascended a hill after one of the big horns; but the mosquitoes were in such multitudes that he could not keep them from the barrel of his rifle long enough to take aim."

The quotations are not taken from random notes of individual travelers, but from the archives of the United States Government, sanctioned and sanctified by being indorsed by the sacred name of Thomas Jefferson, President.

Who would want to be a buffalo and take the risk of going any further west in such a country?

Now, if I have not made a case in favor of the power of gnats and skeeters, let me come back for a moment to the oak trees and the moths. If it shall be decided that the moths are chargeable with the failure of growth in California acorns, then come the questions:

"When—at what period of time did these moths become able to do so? Where did the moths come from, and who brought them; or, with whom did they come?" For there must have been a point of time when these old scattering oaks of California were in the acorn, for is it not written, "Large oaks from little acorns grow?"

Can RURAL readers throw some light on this oak-tree business?

I have no hesitation in attributing great powers to insects. Livingston, the African traveler, informs us that he could not take his horses and cow-cattle into the interior of Southern-Central Africa because a fly, the tsetse, bit them to death. And I know from much reading and some earnest experience that a few "bugs" are laboring night and day to get up a "fruit trust," and to control the horticulture, viticulture, citriculture and several other cultures in California.

There is much to be learned from insects even by capitalists, monopolists, and trust-mongers, or by the lounging, non-laboring, never-sweats of the labor howlers. Finally, brethren, let us all piously remember that the Good Book says in one of its entomological verses:

"Go to the ant, thou sluggard."

Yours largely,

J. W. GALLY.

Watsonville. Jan. 29, 1889

TIMBER FRAUDS CASES IN THE UNITED STATES SUPREME COURT.—Washington dispatches state that on the 4th instant the Supreme Court set aside the order denying the motion to advance the cases of the United States against Geo. H. Perrin, M. F. Riley and John D. Hall, and assigned the cases for hearing the third Monday in March. These cases were appealed from the Circuit Court for the District of California on a certificate of that court. The reasons urged by the Attorney-General for an advancement are: 1st, That in certain localities of the United States a large number of cases have arisen wherein fraudulent conspiracies were entered into, in which parties concerned are alleged to have conspired to obtain contracts for the surveying of public lands; that without making any actual survey of lands according to law, they made up false, fictitious and fraudulent pay vouchers and received money thereon from the United States. 2d.—Prosecutions were instituted against some of the alleged conspirators, and the three cases of this class are now pending on the decision or opinions in this court involving the same general character of questions. 3d.—That 23 civil suits have been brought against parties to such conspiracies, and among others against defendants in this indictment, and the court wherein civil suits are pending declines to try the civil cases until this and other like criminal cases shall have been disposed of. 4th.—That the amount claimed by the Government in this class of civil cases now pending amounts in the aggregate to \$564,247.20. 5th.—That there is reason to believe that if the trial of cases be delayed, much of the evidence on which the Government relies will be lost.

SOUND OLD TIMBER.—The Santa Rosa Republican says that out in the redwoods on Russian river, where they are clearing off ground lately logged over by one of the sawmills to sow it in alfalfa, many trunks of redwood trees are found covered over by the soil washed from the hills since they were prostrated. The length of time since some of the trees fell, as well as the imperishable nature of the timber, may be guessed approximately from the following statement, which is by no means exceptional: In plowing the surface, the top of a log more than 100 feet in length and ranging from 4 to 6 feet in diameter free of the bark, was found horizontally under the center of a huge redwood stump which must have grown astride of it after the other was prostrated—how long after it fell of course it is impossible to say. It may have been rooted in the decaying bark, or in the soil covering the fallen tree, hundreds of years afterward. One thing is sure, the log in the ground is yet sound, though lying there over 400 years while the other tree grew on it, as proved by the rings to be counted in the stump.

From Humboldt County.

EDITORS PRESS:—I have looked in vain for several months for some correspondent to enlighten the outside world, or, at least, that portion of it who read the RURAL, in regard to what is being done in this, one of the most fertile and productive portions of the State.

Humboldt, at the last State Fair, was awarded the third prize in counties for her exhibit, but she labored under greater disadvantages than any other represented at that time, by reason of her lack of facilities for transporting her articles so great a distance, thus subjecting them to many chances for damage and decay. One of the extreme northern counties, and shut off from communication with the world at large except by water, or a long and tedious overland route, and with but a few miles of railroad within her limits, she has no facilities for transporting the productions of her rich soil and green mountain ranges to other than her own markets.

It is but a few years since nothing more than a few tons of potatoes and oats, or an occasional cargo of redwood lumber, found its way from the port of Eureka on Humboldt bay, then a small town, but at present a city of over 8000 inhabitants, whose streets and wharves are bustling with life and activity. A new era has dawned upon her; the people have awakened from their lethargy, and late developments have proved that there is scarcely anything which can be raised in other portions of the State that cannot be produced here. We have no large vineyards with which to intoxicate the world, but as fine grapes are grown upon Upper Eel river as can be found in the State. It is not within the citrus belt, but certain varieties of oranges have been raised in the same locality, while the figs and apricots cannot be excelled.

A great many olive trees have been set out this winter on the South Fork, and we have no doubt that fruit will flourish also. Of apples, plums and peaches it is needless to speak, as it is a well-known fact that the apples from this county were among the finest specimens on view at Sacramento. Owing to the great distance to transport them, the display of peaches was small, but competent judges who were present at our last county fair, and who have had good opportunities for observing, remarked that those on exhibition at that time could not be surpassed by any they had ever seen from the middle counties.

But while the interest in fruit-raising has increased very much within the last three or four years, the lack of facilities for saving and transporting it to market detracts in a great measure from the profits of the producer. During the last season I saw thousands of pounds of peaches that went to waste on that account, and the present year will probably find the same trouble in regard to the crop of prunes, as there will be several thousand trees coming into bearing next season in this vicinity, with no means at hand of utilizing them. What is needed at the present time is a cannery or fruit-drying establishment at some point in Eel River valley in the vicinity of Rohnerville or Ferndale. But it would be impossible to remark in one short letter upon the different branches of industry that are opened and accessible to all. Our dairies are weekly sending forward tons of gilt-edged butter to tickle the palates of San Francisco consumers, and the fine grades of wool from our flocks serve to keep in motion the looms of distant factories.

The Boards of Trade of Eureka and County Produce Commissioners, composed as they are of some of our wealthiest and most energetic men, are doing much to develop the resources and advance the interests of the county, and with the advent of the railroads now pointing this way, Humboldt will come rapidly to the front; while the millions lying in her forests of redwood will be brought forth to add still further to the sources of wealth within her domain.

C. L.

THE CALIFORNIA CANNED GOODS ASSOCIATION has elected the following directors for the ensuing year: Isidor Jacobs of A. Lusk & Co.; G. M. Bowman of the Golden Gate Packing Co., San Jose; E. L. Dawson of the Dawson Packing Co., San Jose; P. D. Code of Code, Efst & Co.; W. H. Wright of the San Jose Packing Co.; W. L. Locke of the Johnson-Locke Mercantile Co., and W. M. Boyson of Williams, Brown & Co. The officers are as follows: Isidor Jacobs, Pres.; G. W. Bowman, V. P.; P. D. Code, Treas.; Chas. J. King, Sec. The following committees were appointed: On Commerce, W. L. Locke, H. Jacobs and J. Kleinhaus; on Legislation and Rules, P. D. Code, A. G. Freeman and W. S. Stevens.

BEET-SUGAR FACTORIES.—The Bulletin, noting the return of Claus Spreckels from the East, says that he has reached no decision as yet regarding the establishment in the State of other beet-sugar factories similar to that at Watsonville. At Washington he urged successfully the passage in the Senate of the Sugar Bounty bill, which gives a cent a pound to all producers in the United States of cane, sorghum or beet sugar. Mr. Spreckels was accompanied on his trip by C. R. Buckland of this city.

A SCREW which is half nail is a new invention. It's holding power in white pine, they say, is 333 pounds against the 298 pounds of the present screw.

DOMESTIC ECONOMY.

Candy and Beet Sugar.

EDITORS PRESS:—Some persons here say that beet sugar will not do to use in canning fruit, as it tends to spoil the fruit. I wish that some readers of the PRESS who have had experience in this line would write it out and decide the point. To me it seems unreasonable that beet sugar should not be as good for that purpose as any other, but I am willing to let facts overrule suppositions.

I made some candy the other night out of syrup, boiling it down (which is something editors approve of), and I learned that the very best syrup, while it does not require one-quarter as long boiling as cheap molasses, does not make as good candy as the latter, though it is just as easy to work. I boiled the syrup 15 minutes only, and that was two or three minutes too long! Will some one please tell me the best way of making molasses candy out of sugar? (Don't smile; you know that is the best way of expressing it.) C. P. N.
Haywards, Cal.

STEAMED OYSTERS.—Set a covered dish where it will heat; wash and drain the oysters; put them in a shallow tin and place it in the steamer; cover and leave it over boiling water until the oysters are puffed and curled. They may be dressed at table when eaten, or butter, salt and pepper may be added in the kitchen when served in the heated dish.

COLD SLAW.—Shave off a hard white head of cabbage and season with the following dressing: One cup of cream, 1½ teaspoons of mustard, one teaspoon of salt, one teaspoon of butter, one tablespoon of sugar and yolk of one egg, beaten light. When boiled, add one cup of strong cider vinegar, stir well and pour over the cabbage.

LADY FINGERS.—One cup of sugar and one-half cup of butter; beat them together; then add one egg and beat well; add one-fourth cup of milk, in which one-half teaspoonful of soda is dissolved; a pint of flour with a teaspoonful of cream of tartar in it. Cut in strips, roll in sugar and bake in a quick oven.

CREAM PIE.—One pint of sweet milk, white of one egg and yolks of three; two tablespoonfuls of sugar, two of cornstarch; beat all together, let it cool and flavor. Make a rich crust and bake separate and fill; beat the whites of two eggs to a froth, spread over the top and set in the oven to brown.

PUMPKIN MARMALADE.—Peel and stew pumpkin thin, rub through a sieve, add to the pumpkin an equal quantity of sour apple pulp, and to six cupfuls of this mixture add three teaspoonfuls of sugar and three lemons cut very fine; stew until rich and thick, stirring constantly, then put away in jelly tumblers.

CORNMEAL PANCAKES.—One pint of fine cornmeal, four tablespoonfuls of wheat flour, one quart of milk, three eggs, pinch of salt. Mix the meal and flour with the milk, beat the eggs very light and add them. Bake on a hot griddle and serve hot with fresh butter.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Buena Vista Rancho.

The colony tracts offered last week by Messrs. Briggs, Fergusson & Co., at auction on the Buena Vista rancho was a success. That portion unsold will be graded in price and offered at reasonable prices and liberal terms at private sale. The former owner, Mr. Hiram Corey, will now sell the stock, consisting of a choice herd of cattle, horses, and other live-stock, together with farming implements, on favorable terms, at private sale.

THE Nebraska Senate has passed a bill which provides that before any liquor license shall be granted the written consent of the owners and occupants of adjoining property shall be filed with the granting board.

MECHANICS' FAIR.—The directors of the Mechanics' Institute have decided to open the Fair this year August 27th and close October 5th.

Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

WIDENING ORCHARDS.—Oakland *Tribune*, Feb. 11: A large number of fruit trees will be planted in Alameda county this season. On the Perkins ranch, near San Lorenzo, 50 acres are being prepared for this purpose, most of which will be devoted to apricots. Near Livermore, on the Black place, 30 acres will also be devoted to apricots and 10 acres to a varied assortment. Fifty acres are being set out to almonds in Mellow valley. Many others are making preparations to extend their fruit area.

THE GUM-TREE LEAVES being exhausted on the William and Merritt tracts, the manufacturers of eucalyptus oil have removed to Haywards. They will return in about three years, when the trees have grown sufficient for another topping.

Kern.

WINTER IRRIGATION.—Bakersfield *Echo*, Feb. 7: The farmers are now giving their lands a thorough irrigation. Every year the number of those who favor winter irrigation grows larger. This year there is a new factor in the problem. By the terms of the water contract the lower owners of land are entitled to a division of the water in the river after May 1st.

Los Angeles.

POULTRY.—Orange Cor. *Times-Mirror*: Some people think chickens don't pay; they sell eggs so often and in such small quantities that they don't realize how much they get. A lady in this vicinity, who is a shrewd manager, kept account of sales and expenses last year, and found that she sold fowls, young roosters, enough to pay for the feed, and netted just \$3 per hen for her labor. Incubators for hatching chickens are much in favor, and very extensively used in this valley among poultry-raisers. These machines are of every pattern, and many that are doing good work are home-made.

Sacramento.

EDITORS PRESS:—Everything in the agricultural line is looking finely and every one in this neighborhood is at work pruning vineyards and orchards, and some are plowing, as the ground is in fine condition. The prospects for small fruits in this part of the county is very encouraging; already the dealers in the interior and north are making arrangements for their supplies of the early fruits and predict that the demand will be double that of last year. The weather is delightful, as it has been for a month. I hear that in some quarters they begin to want rain on late-sown grain, but we do not want any here for some weeks yet.—L. H. F., *Florin*, Feb. 10th.

San Benito.

EDITORS PRESS:—The weather here having changed from frosty nights to warm, damp ones, all vegetation seems to be taking a fresh start, as if striving to make up for its slow growth during the cold snap. It appears the cold weather rather than the lack of moisture has kept the grain from growing very fast, as, upon examining the fields, we find the earth damp almost to the surface. The grain now up will not suffer for rain if showers come within the next two or three weeks.... Quite a large acreage of potatoes is being planted through the valley this year, as those who have experimented in growing them find the crop a paying one.... A farmer near Hollister planted five acres in beets last season, and they averaged him \$68 an acre. Almond trees are in bloom and orchards are being set out.—A. F., *Hollister*, Feb. 10th.

San Diego.

GRAIN OUTLOOK.—San Diego *Sun*, Feb. 7: 1,600,000 bushels of wheat and barley will be raised from the 108,800 acreage of grain in San Diego county this season. From all sides comes the encouraging report that the season is the most auspicious one for years, and splendid crops will be the reward of the farmers' industry. There are several tracts of new land which have not yet been heard from, and there is no doubt that the yield from this land will greatly increase the total. At San Jacinto it is estimated that 200,000 sacks of wheat will be the result of the harvest at that point. The average yield of wheat to the acre will be at least 15 bushels, and that of barley 25 bushels to the acre.

IMPROVING LIVE-STOCK.—Otay *Press*, Feb. 7: D. O. McCarthy of the Mesa has contracted with Colonel Saxe, the well-known importer, for three registered Berkshire pigs and a Holstein bull called "Ajax." He has also ordered a dark gray draft stallion by Duc de Chartres out of a mare by English Glory. The horse weighs 1525 pounds and stands 16½ hands high and is of the best breeding.

San Luis Obispo.

ORANGES.—S. L. O. *Tribune*, Feb. 8: We were favored yesterday with some of the oranges grown on R. R. Harris' place, three or four miles northeast of the city, which certainly could not be surpassed by any grown in California, either in appearance or flavor. Mr. Harris' home is at an elevation of about 800 feet above the sea-level, sheltered and warm, and plentifully supplied with water. Every variety of fruit thrives there admirably. Frost seems to be entirely unknown. He has had tomato-vines three years old. He has a few orange trees only, but they seem to be specially happy in their surroundings; and from

three trees seven years old he took last season nearly 1000 oranges.... Arroyo Grande *Herald*: Mr. Leedham has several trees now in bearing and covered with fruit in all its stages, from the bud to the full, ripe, juicy orange, free from bugs and blemish. One tree has oranges of the Washington Navel variety that measure 13 inches in circumference.

Santa Barbara.

REPELLING FLOWER-THIEVES.—Santa Barbara *Press*, Feb. 9: A. Eldred has been bothered a good deal by strangers who enter his yard at the corner of Anapamu and De la Vina streets and pluck flowers without permission. Mr. Eldred has a fine garden and does not like dogs. To save his flowers and profanity he put out two small-pox flags last week on the side and front of his house and now sees his roses thrive and his heliotrope flourish untouched. To be sure the market men cannot be induced to deliver their orders at the house and one caller has been scared into a run by the presence of the flags, but Mr. Eldred values his flowers more than all that and the yellow signals will remain.

HORTICULTURAL TOPICS.—The February meeting of the Horticultural Society was held at Prof. H. C. Ford's studio Wednesday afternoon, there being about a dozen members present. H. C. Ford was chairman and A. A. Boyce, sec'y pro tem.... O. N. Cadwell of Carpinteria exhibited a quantity of Lima beans that had been perforated by a beetle or weevil, an insect which threatens great damage to Carpinteria's staple industry. Mr. Cadwell thought they were introduced in the "Golden Wax" bean in 1887. So far as observed, the insect attacks all kinds of beans. H. C. Ford described a recent visit to the Hollister ranch that he has made to examine the progress of the *Icerya*. He found the scale on all the citrus trees, pepper, walnut, magnolia, fig, Norfolk pine, yew, verberna, rose, oleander, etc. No absolute and available remedy has yet been discovered for this pest.... Mr. Ford exhibited a fruit and stone received from Mrs. Dr. Longshore of the "Quong Dong," or native peach of Australia.... The annual spring exhibition was discussed, and it was generally agreed to hold the Flower Fair, probably in April.

THE WALNUT ORCHARD of Col. Russell Heath is the largest in the United States, and probably in the world. Col. Heath has 75 acres of walnuts in one body, and the year before last his trees produced 75 tons of walnuts, yielding him large returns.

Solano.

EARLY BLOSSOMS.—Winters *Express*, Feb. 9: On Sunday last E. W. Hindley sent us, by E. Ireland, a bunch of almond blossoms from his Skyhigh ranch. The blossoms had been taken from trees that had been in bloom several days.... On Tuesday, F. N. Wertner, from his hillside farm in Pleasant valley, brought us two twigs cut that day from an apricot (Royal) and a peach tree, both covered with blossoms. Will this do for the first week in February?

PEACH-PITS FOR FUEL.—Vallejo *Chronicle*: It has been demonstrated in Vaca valley that peach stones will make as good a fire for household purposes as the best coal in the market. The fruit-growers, instead of throwing the pits away as heretofore, dispose of them at the rate of \$6 a ton. A sack of the stones will weigh about 80 pounds, last as long as an equal weight of coal, and give a greater intensity of heat. At many of the orchards in the valley may be seen great stacks of peach and apricot stones which will eventually find their way to S. F. and other places to be sold for fuel. The apricot stone does not burn so readily as the peach, and will not command so good a price. As soon as the owners find they have a market for the stones, a greater number of peaches will be dried than heretofore.

Sonoma.

ARTESIAN WATER.—Sonoma *Index-Tribune*, Feb. 9: Last week we mentioned the striking of an artesian well on the property of S. Schocken in the northern part of town, which gave a flow of 36,000 gallons per 24 hours. This result did not satisfy Mr. Schocken and he gave orders for the well-borers to go deeper, with the result that last Tuesday, after boring several feet below where the first flow was tapped, an immense body of water was struck at a depth less than 150 feet from the surface. The water gushes over a 6 inch pipe in torrents and flows at the rate of from 300,000 to 350,000 gallons per 24 hours. The water is clear, sparkling and cool, and for domestic purposes has no equal.

Tebama.

SUCCESSFUL STEAM-PLOWING.—Red Bluff *Sentinel*, Feb. 9: One of Daniel Bat's traction-power engines, manufactured at San Leandro, is on trial in W. W. Fennell's ranch as the motive-power to draw 12 10 inch plows. The machine was purchased by John S. Battler at a cost of \$4500 provided it is a success in plowing. We saw it in motion Monday and it appears to be a perfect piece of machinery, and there is little doubt that it will work to the entire satisfaction of the manufacturer and the purchaser. Mr. Battler has taken a contract to plow 600 acres of summer-fallow for Mr. Fennell. After one day's work with the machine and plows, he writes us that three gangs of four 10-inch plows each were attached to the machine, cutting ten feet in width, eight inches deep and leaving the soil in the best possible condition. The power, 36-horse, moved off like a thing of life, and our informant says it would

draw another gang without any perceptible strain on the machinery. The Moline gangs were used. The speed of the power is about three miles an hour, the steam gauge showing 100 pounds of steam.

Tulare.

FENCE POSTS, CHEAP.—*Della*: Many of the Tulare farmers use old railroad ties for fence posts. These they procure from the railroad company at or near the different stations. About a foot is cut off one end of the tie, and then it is split in two. The tie costs the farmer 12½ cents at the railroad. This makes his fence posts cost him 6½ cents each, as nearly every tie may be split into two good posts. This makes a cheap enough fence, and yet the railroad company realizes about as much for their ties as they pull for them, besides having the use of them for from 10 to 15 years. This is an example of thrift on both sides.

Ventura.

HONEY CROP.—EDITORS PRESS: The prospects of a good crop of honey the coming season are very dubious in this section. The "filaree," upon which bee keepers depend, largely for feed to build up their colonies in the spring, is about done flowering, and much of it is already dried up on the hillsides. This is due to unusually early fall rains and the dry weather which has followed. These same causes will bring on the sage and other bee-forage so early in the spring that the cold, foggy weather which we have at that time will prevent the secretion of much nectar, even if there should be an abundance of flowers.—R. A. HALLEY, *Piru*, Feb. 7, 1889.

Yolo.

THE GRAIN-FIELDS.—Davisville Cor. *Democrat*, Feb. 3: The farmers have all finished sowing their grain in this section of the country, and commenced to summer-fallow. The prospects at present are good for a big crop.

ARIZONA.

A GREAT DITCH.—Tucson *Citizen*: L. A. Hicks, the engineer of the Mohawk canal, reports the work on the canal progressing satisfactorily and that only ten miles remain to be furnished. The main canal will be 20 miles long, with a branch 13 miles long, making 33 miles in all. Water has already been turned into the first ten miles, and it is expected to be completed and open, ready for use, on the first day of March. Waste and division gates are now being put in. A large number of people are coming into the valley almost every day to prove up on their lands. Between now and spring a great many will move in, as everything will be in readiness for supplying abundance of water for the spring crops, and arrangements have already been made for the planting of 3000 or 4000 acres in alfalfa during the next two months. This canal will reclaim not less than 30,000 acres of land. George Norton, the superintendent of the company, is now putting out a 30 acre vineyard and will put 30 acres in olives. The weather this winter has been unusually cold in that section, but none of the young orange trees already growing have been in any way injured. The land along the canal all slopes to the south, and is a rich sedimentary deposit. The canal starts from Texas Hill, 60 miles from Yuma, running on the north side of the Gila river to a point four miles from Tarcia, on the S. P. railroad. Besides the Mohawk there is another canal being constructed on the south side of the Gila river by the South Gila Development Company, 15 miles of which is now completed. This is a St. Louis company, and they will use this canal for the purpose of raising forage and subsistence during the construction of a much larger one now being projected by them, with a view of irrigating mesa lands lying south of Texas Hill.

OREGON.

MESSRS. EDITORS:—The Chinook winds have struck Eastern Oregon, and what little snow lay on the hills is fast disappearing. The stockmen are glad to see an open winter, for last fall the range grass was very short and the majority of the cattle went into winter in rather an unusual condition, being somewhat poor. One great trouble with the farmers here is that they do not stack enough straw; being used to having abundant grass in the fall, straw was allowed to go to waste, and so, as a general thing, stock have to go on short rations, and do not have the comfort of a straw-stack during the stormy seasons. A good husbandman will provide feed for his stock, will see that all of the straw is properly stacked, and, if it is not used, can be burned or left to enhance the value of the manure-pile. Many an animal has been lost because it had to stand out on the hills without any shelter during the storms of winter. There are about 180,000 head of sheep in Umatilla county. Some few men are feeding their flocks, but the majority of flock-masters are taking their sheep through on the range grass. The best days for the large herds have passed away; the plow has turned under the sod, and in place of bunch grass there grows the golden grain. To decrease the number and increase the standard of their flocks has, for the last few years, been attracting the attention of all stockmen in Oregon. It takes no more feed to keep a graded animal than a scrub, and the returns are ten to one in favor of the graded.—W. A. S., *Helix*, Oga.

Vacaville Notes.

Drying Fruit—Rattleweed.

EDITORS PRESS:—The weather is pleasant; foggy mornings, with heavy dews at night. A few scattering buds on the almonds and apricots are beginning to blossom. The ground is getting pretty dry and we will need rain soon. People are very busy pruning, plowing and burning brush. Nearly everybody's cold has left, and there is very little sickness in the neighborhood.

Five brick buildings are going up in Vacaville as fast as men can put them up. Parties are at work near Vacaville getting ready to burn a brick-kiln.

"Fruit growers" of San Jacinto wish a few points on

Fruit-Drying.

Which I will try to give, as we dry fruit here. The length of time to dry depends upon the weather. With the mercury at from 60° to 100° through the day and no dewy nights, peaches of 2 or 2½ inches will dry in 5 to 7 days. Small peaches dry sooner, but do not dry well in wet weather (found out by experience). Board trays are better than anything else to dry on. Some say redwood will blacken the fruit, but it does not for me. Some here put the trays upon trestles two feet high. The fruit is a little cleaner than if the trays were set on the ground, but it takes two days longer to dry. If trays are scarce, set them on the ground. We never turn the fruit unless when half dry; we put the fruit from two trays on to one to save trays. There will be no need of shade for the fruit; it is handy for the man sometimes.

The fruit when out should not stand over an hour before it is put into

The Sulphur-Box.

Any kind of box will do to sulphur in, providing you can get the trays in and shut them up air-tight. We have little houses holding 40 to 60 trays. Some large dry-houses load the trays of fruit on to trucks which are run into the sulphur-houses, and when sulphured enough are run out to the drying-yard, thus saving handling. Enough sulphur should be put into an old tin pan, or what is better, an old frying-pan, to burn from two to nine hours. About a quart will be enough. We take the common sulphur such as is used on grapevines, and costing three cents per pound. A piece of sack or paper will do to light the sulphur with. There are many opinions about the time required to sulphur fruit. I notice our fruit-growers, when they speak before the societies or write for the papers, say from twenty minutes to one hour; but when they actually sulphur the fruit, it is about three hours, and many make a practice of sulphuring all night when it is handy to fill the boxes at night.

There are but two machines that I know of for

Peeling Peaches.

One costs \$10 and was pronounced a failure here. The other is a small one, costing \$1.50, and will last ten days' steady running with care. With peaches 2½ inches in size, which is as small as it will pay to pare, a fair hand can peel 100 pounds per hour. They paid 15 cents per cwt. here last summer for peeling, which was not enough. From 20 to 30 cents per cwt. was paid for cutting.

Dried fruit is pressed into boxes from 25 to 50 pounds. It is quite a knack to face a box and press the fruit and requires some machinery, so if one has a small quantity it would be better to sack it.

The boxes used here to market green fruit in are 12x18 inches inside measuring and 4, 5 and 6 inches deep, and will hold five pounds to the inch in depth. The fruit for drying should be perfectly ripe, but not soft enough to jam much. For sending to the cannery or dry-house, we use boxes that hold 60 pounds.

In regard to the rattleweed about which so much is said, there are several kinds that look so much alike the difference can be told only by comparing them together. In our vicinity the weed grows only in one pasture, and the stock there are often affected. G.

Vacaville, Feb. 9, 1889.

For New Subscribers—Something New and Rare.

PACIFIC COAST RELIEF CHART.

PHOTO-ENGRAVING.

With subscription paid one year in advance for this paper, and 10 cents to pay postage and mailing tube, we will send a fine Photoplate Relief Chart of the Pacific Coast, embracing California, Nevada, Oregon, Washington Territory, and part of Montana, Idaho and Utah. Photographed from a topographical relief model in plaster (5 feet 3 inches by 8 feet 6 inches in size), made recently by Isaac Winston and Prof. Geo. Davidson (the latter Chief of the U. S. Coast Survey on this Coast for the past 20 years).

While it does not take the place of an ordinary map, it illustrates, comparatively, the elevations and depressions of the principal mountains, valleys, rivers, lakes, ocean and bay-shores of the Pacific States and Territories, and makes a permanently useful, handsome and desirable picture for either library, office or home.

The charts are 19x24 inches, well suited for framing, if desired. It is as handsome, and even more durable, than an ordinary photograph. Send in so choice an article offered as a newspaper premium. Sent to old subscribers on the same terms on paying one year in advance of current date. Subscribe and secure this permanently valuable chart.

THE IRRIGATOR.

Government Work in California.

Wm. Ham. Hall, our State Engineer, who went to Washington about a month ago, has just returned, and a *Record-Union* reporter has obtained from him some items of interest relative to his mission there.

Preliminarily, Mr. Hall desired it stated that he went East in compliance with the following letter from the director of the United States Geological Survey, received early in November last, together with telegrams which preceded it, and some subsequent correspondence:

DEPARTMENT OF THE INTERIOR,
U. S. GEOLOGICAL SURVEY,
WASHINGTON (D. C.) Nov. 3, 1888.

Mr. Wm. H. Hall, State Engineer, Sacramento, Cal.—DEAR SIR: You are probably informed through the press that Congress at its last session decided that an irrigation survey should be made of the arid lands. Your long experience and eminent service to the State of California in this field of investigation make me desire to have a conference with you in relation to the subject. I have for several weeks hoped that I could come to meet you in California, but the press of official business prevents it. Can you not come to Washington and give me the benefit of your advice?

Some weeks ago I wired you to this effect, but received no reply. I then followed it with a second telegram, which was not delivered. Still subsequently I wrote to a gentleman in San Francisco asking him to see you, to which letter I received no reply. On Thursday last I telegraphed the Governor of California, which telegram you received and to which you have replied.

If you find that you can do me the favor to come to Washington, your ordinary expenses will be paid, and I can also pay you at the rate of * * for the time you give the matter. * * I also send you orders for transportation. * * I shall be very glad to have you arrive in Washington on or about November 18th, if that date will suit your convenience. Hoping that I shall have the pleasure of meeting you, I am, with respect,

J. W. POWELL, Director.

The irrigation investigation to which reference is here made, said Mr. Hall, in reply to questioning, is one now in the first few months of its existence and is being prosecuted to ascertain, under the law, "the extent to which the arid lands of the United States may be redeemed by irrigation." It should be remembered that about two-fifths of the tillable lands in the United States require irrigation to insure any return for cultivation. The Government now has very little land left that can be farmed without irrigation, but she has several hundred millions of acres that will produce well if only it were irrigated. These arid lands cannot be disposed of to settlers, because settlers cannot cultivate them. Now, the Government has undertaken to ascertain to what extent they can be irrigated, and by what means and at what cost, and the law goes on to direct that special examination shall be made with reference to the possibilities of storing waters on a large scale. Storage sites are to be reserved and irrigable lands are to be reserved from sale until the Government can further determine what policy it will adopt in the disposal of such lands and storage sites.

The investigation was favored by President Cleveland, was strongly urged in a special communication by Secretary of the Interior Vilas, and has been committed to the Geological Survey's Bureau, of which Major J. W. Powell is the director.

Further in reply to questions, Mr. Hall said in substance: This is to be an immense work, lasting through years to come. It has been chiefly urged, as I understand it, by Representatives from Colorado, Nevada and some of the Territories, though several of the California Congressmen have been very active in its support. The estimated cost is \$4,000,000, which is in addition to an estimated amount of \$20,000,000 to complete the geological survey. This geological survey is sustained by an annual appropriation of about \$500,000, and now the House of Representatives has agreed to an additional sum of \$250,000 per year for the work, which amount will probably be raised in the Senate to \$350,000.

Reporter.—Will any of this money be expended in California, and if so, how much?

Mr. Hall.—Yes; California will ultimately get her share, in proportion to the area of arid Government lands in the State of which there seems to be any possibility of irrigation. But, as you know, there are no considerable bodies of Government irrigable lands left in this State, except it be in the northeastern counties, in the counties east of the Sierra Nevada mountains, and on the deserts south and east of the present cultivated parts of the State. The director of the surveys, Major Powell, is anxious to have California co-operate with him in this work, as Colorado proposes to do, and as other States and Territories probably will do.

Rep.—What advantage will this be to the State?

Mr. H.—It will secure to the State a much larger expenditure of the Government moneys out of the first appropriations than would otherwise be made here; it will enable the State to get the results of all the work in the State, and publish them for the benefit of her citizens, at an early day. These are two great objects. If Colorado steps forward and says to the Director of the Geological Survey, we will spend \$30,000 or \$40,000 this year on this work if you will spend an equal amount in this State, and give

us the results for prompt publication, she will probably be met on the proposition.

The Government Bureau reports are three to four years behindhand in printing at Washington, and if anything is done in California out of this first appropriation it will probably be three to four years before we see any of the results in print, unless the State takes hold of the matter and provides for helping in the work and publishing the results. The great feature of the work is to be the water supply—the storage question. That study and these surveys can be extended all over the State, and the State will help in the work, as was done in the case of the Topographical and Geological Surveys of Massachusetts, New Jersey and other Eastern States. Major Powell has by this time addressed an official communication to our Governor on the subject, and I am expected by Mr. Powell to urge the matter before the proper committees of the Legislature.

Rep.—Is this done, Mr. Hall, in your capacity as State Engineer?

Mr. H.—No, sir. As I distinctly reported to the Governor, before going East, I will not hold the office of State Engineer. You will find some plain talk on this subject in my report. The only interest I shall have in representing this matter to the Legislature will be as a Californian. Beyond that I act in the interest of the Government work under Major Powell.

Rep.—Do you mean that you are engaged in that work, and, if so, in what capacity?

Mr. H.—You are too fast in drawing conclusions. As to my relation to the Government work and standing with Major Powell, you may judge from this letter handed me by him several days after my arrival in Washington. I am now engaged in preparing a report in compliance with it.

DEPARTMENT OF THE INTERIOR,
U. S. GEOLOGICAL SURVEY,
WASHINGTON, D. C., Jan. 15, 1889

Mr. Wm. Ham. Hall, Consulting Civil Engineer, Present.—SIR: Pursuant to the purposes of the conversation we have held, I have the honor to request that you submit to me in writing an outline of your opinions on the general subject of an irrigation survey, and will specially call your attention to the following subjects:

1. The extent and character of the necessary hydraulic survey.
2. The method to be pursued in stream gauging.
3. The methods to be pursued in sediment gauging.
4. The methods to be pursued in evaporation gauging.
5. The methods to be pursued in rain gauging.
6. The methods to be employed in the selection of reservoir sites, and the conditions and limits under which these selections are to be made.
7. The methods to be pursued in the study of soils for the selection of irrigable lands.
8. The methods, conditions and limitations to be pursued and observed in the selection of irrigable lands.
9. In what way should the duty of water be determined, and to what extent should researches for this purpose be carried on?
10. What collateral investigations and reports should be made to render the work of greatest practical value to the people?

It is not desired that you confine yourself to the specific subjects mentioned above; your opinions upon every branch of the irrigation survey, and upon the work in general, are solicited. I beg to call your attention to the Senate documents handed you herewith, in which you will find an outline of the work as proposed by me, and to the conditions and limitations of the statute providing for the survey.

Your experience, observations and investigations on the subject of irrigation have been so extensive, and your publications are of such value, as to warrant the belief that you can render important service to the irrigation survey under my charge by setting forth freely and fully your opinions on the subject.

You will duly appreciate the importance of making the survey of practical advantage to the people who have or will make homes in the arid region.

Yours, with respect, J. W. POWELL, Director.

Rep.—Have you any permanent engagement on that work?

Mr. H.—It is sufficient for the present to say that other business would not now admit of my making such an engagement. I shall give all the time I can spare to it for the next few months; and you can say that I certainly will not be State Engineer after June of this year, under any circumstances. What I say and shall say in favor of the State's co-operating with the Powell work, is entirely in the interest of the State, and absolutely free from any personal motive. If the State work goes on, it will be under some one else as State Engineer. The State has much to save and much to gain in this matter, and I think that if members of the Legislature will take the trouble to look into it they will agree with me on it.

The Wright Law Criticised.

EDITORS PRESS:—I notice in yesterday's issue of your paper an article headed "New Water Laws," with editorial comments referring to the Wright bill, and a request that men who have had experience in irrigation will give their views of the question. I am no writer and am not competent to do justice to the subject of irrigation; but, having lived in Los Angeles county for 28 years, and had experience in irrigating most of that time, I will give you a few of my ideas as to the defects of the Wright law.

In the first place, in Sec. 2, providing for the formation of water districts, one general principle is disregarded, namely, this: "Don't

rob Peter to pay Paul." For instance, in case of a small community, having barely sufficient water for their land, who have perfected an irrigation system of their own, and improved their land by many years' hard labor, with fine orchards, comfortable buildings, etc., the Wright law steps in and allows the people living on the outside, if more numerous than this community, and having no other source or supply of water, to form a large, expensive irrigation district, including this small community, and force them to a division of their water, spreading it over a territory five or eight times as large. Is it not evident that, in the losses in spreading the water, less land can be irrigated with it, and that a large portion of the orchards of the community must die simply that a few trees may be raised somewhere else with the water of which the community has been robbed by this legal process? The law is lame from beginning to end, and the best thing that can be done is to repeal it and call a convention of old, experienced irrigators, three or four from each county, to frame a law, or three or four laws, if necessary, to make them applicable to the several different localities.

The Wright law provides (Sec. 18) for the assessment of all real property, which includes houses, and all other buildings and fencing, and the apportioning the water to the land-owners in the ratio of the last assessment. (See Sec. 11.)

That is all wrong. A man with a \$10,000 house and five acres of land would get as much water as some poor man owning a \$200 house and 50 acres of land.

Now one acre of land needs as much water as another acre, and the law should be so constructed as to provide for the assessing of each and every acre of land at one and the same price, regardless of its actual cash value, and for the distribution of the water on the acres last; then each acre would pay an equal proportion of the expense and receive an equal proportion of the water.

Also the tax-collector and treasurer should be done away with and the district bonds should be treated and the money raised from them in the same manner as in the case of district school bonds.

The law is lame in providing for elections; it allows any qualified voter to vote at all district elections, whereas it should allow only actual land-owners to vote, and should require a two-thirds vote to carry in voting for district bonds instead of a majority vote as at present. (See Secs. 2 and 15.)

Then, too, the Board of Directors is clothed with more arbitrary power than any other governing body in the United States. As I have said before, the law is lame in many sections and needs amendment.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the originators? I am to have mine just such. Do you want new varieties that are really good, and not merely novelties? I am to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them direct from the grower? I grow a large portion of mine—few seed-men grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied for soon. The greater part of this land is rich, level and all ready for the plow. Address **L. E. Smith, Pixley, Tulare Co., Cal.** or Ranch Owner, office **RURAL PRESS** San Francisco, Cal.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$1500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to

False News.

The San Francisco Bulletin of February 6, 1889, publishes the following item, which is absolutely false and without foundation:

BRIDGEPORT, Conn., February 6.—The New Home Sewing Machine Company will go out of business. It is not able to continue at a profit, owing to strong competition.

The San Francisco Morning Call of February 7, 1889, publishes the following:

Going Out of Business.

BRIDGEPORT, Conn., February 6.—The New Home Sewing Machine Company will go out of business. It is not able to continue at a profit owing to strong competition. Several hundred hands will be thrown out of employment.

This, it is useless to say, is also false, being substantially the same as the other. "The New Home Sewing Machine Company" is as solid as a rock. It has the finest equipped and best appointed sewing-machine factory in the United States, located at Orange, Mass., where over 500 machines per day are turned out. We have sold over 1,000,000 machines, and are selling more than 150,000 machines per year on the second million. This should be conclusive evidence that the company is not going to retire from a business in which upward of 2,000,000 American dollars are profitably invested. In other words, The Popular New Home is here to stay, as it "ranks high above all competitors and is the leader of the age in practical improvements." The above-quoted items being published to the world will, doubtless, injure our business, and we warn all people not to credit any publication or verbal assertion of such a nature regarding our company, but when information is required, please interview the undersigned. Most truly, CHAS. E. NAYLOR, General Manager Pacific Department The New Home Sewing Machine Company.

Main office, 725 Market street, History building, San Francisco.

Company branch offices—46 Morrison street, Portland, Ogn.; 18 South Second street, San Jose, Cal.; 55 North Spring street, Los Angeles, Cal.

Local agencies everywhere. The following dispatch was received by Mr. Naylor this morning:

ORANGE, Mass., February 9, 1889.

Charles E. Naylor, Manager New Home Sewing Machine Company, San Francisco, Cal.: Mistake The New Home Sewing Machine Company not embarrassed financially. They are solid as the granite hills of New England. Business good, and the machine the most popular.

JOHN W. WHEELER, Vice-President, Secretary and Treasurer.

California Sunshine.

This is the fitting title of a very delightful little book by Mrs. L. H. Shuey, so well known to readers of our Journal as the Maid-of-all-Work, the pseudonym which she assumes in her contributions.

The collection includes "The Golden Spike," "Dare," a Napa college alumni poem, "In Memoriam" poems, a C. L. S. C. poem, and the "Home and Field Verses of California Farm Life on the Plains."

We can earnestly commend this work of one who writes so acceptably for our columns to all our readers who love pure sentiment, truth to life and loyalty to California in musical verse.

This book is for sale at book stores and by the author, Mrs. L. H. Shuey, 2509 P street, Sacramento, Cal.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

SALZER'S WHITE WONDER OATS.

Over 100,000 customers of 1888 gladly testify that they INCREASED ALL YIELDS. Yes, often DOUBLED them by sowing SALZER'S NORTHERN GROWN SEEDS. Because no other seed is so full of life, vigor and vitality—so prolific and early as Salzer's.

OAT NOVELTY--WHITE WONDER!

This is the most wonderful Oat we have ever seen or heard of, and we have tested EVERY sort offered by EVERY seedman in America, but none come half way up to it in VIGOR, vigor, beauty and quality. Scores of 1888 customers say: "Salzer's Giant Flat Dutch." Yielded 5 to 10 times as much as common oats! Its enormous yield is due to its great stooling properties, long ears and plump kernels. Early, fine, wonderful.

\$750 in prizes for Largest Yield in 1888. See Catalogue about it. First Prize \$300. Who won it? The farmer or wants big crops. Well, he can have them every time by sowing my seeds—yielding on wheat, 10 bu., barley 70 bu., new corn 125 bu., potatoes 600 bu., etc. Headquarters for all Farm Seeds, Grasses, Clovers, LICERNE CLOVER, MILLET and ENSILAGE CORN.

Floor area of seed store 2 acres. Potato cellar capacity 20,000 bu. 25 Packages Earliest Vegetable Novelties, postpaid, \$1. Send \$2 for Wonder Oat and Grain Samples or 10c for Giant Cabbage and receive elegant Catalogue.

JOHN A. SALZER, La Crosse, Wis.

One-third natural size.

WAX BEAN

OUR MANUAL OF EVERYTHING FOR THE GARDEN

For 1889 is the handsomest and most complete Garden Guide ever published. It is really a book of 140 pages, size 9x11 inches, contains three colored plates, and illustrations of all that is new, useful and rare in Vegetables, Flowers, Fruits and Plants, with plain directions "How to grow them," by Peter Henderson.

This manual we mail to any address on receipt of 25 cts. (in stamps). To all so remitting 25 cts. for the manual, we will at the same time send free by mail, in addition, their choice of any one of the following **Splendid Novelties**, most of which are now offered for the first time, and the price of either of which is 25 cts.: One packet of Autumn King Cabbage, or one pkt. of Yosemite Mammoth Wax Bean (see illustration), or one pkt. Delmonico Musk Melon, or one pkt. Giant Pansy, or one pkt. Scarlet Triumph Aster, or one pkt. Sunflower "Silver and Gold," or one plant of the climber Blue Dawn Flower, or one plant of the White Moonflower, or one Bonanza Easter Lily, or one plant of either a Red, Yellow, White or Pink Everblooming Rose—on the distinct understanding, however, that those ordering will state in what paper they saw this advertisement.

PERFECT MUSIC BOOKS

For CHOIRS, for CLASSES, for CONVENTIONS, are perhaps impossible—but DITSON & CO.'S matchless books are just on the line.

Emerson's Easy Anthems, 80 cts., \$7.20 are 40 in number—quite new—give about one for each Sunday in the year, and are full of grace and beauty.

Song Harmony, 80 cts., \$6 per dozen, by L. O. "perfect" book for singing Clases, perhaps the best of a long series of books by the same author.

The Graded Singing School, 50 cents, \$4.50 per dozen, by D. F. Hodges, is a sensible, practical method, by a very sensible, practical teacher, and is fully furnished with good material for successful work.

Jehovah's Praise, \$1, or \$9 per dozen, by L. Chubb Music Book, with a large number of Anthems and Tunes for Choirs, also Glee, Part Songs, and a multitude of melodious exercises for classes.

Temple Chimes, 35 cents, or \$3.60 dozen, by published, is a very superior collection of new Gospel Songs, of Hymns and Tunes.

Praise in Song, 40 cents, \$4.20 dozen, by L. O. and E. U. Emerson, is a new Sunday School and Praise Book, full of uncommonly good music and hymns. A very "perfect" book for vestry singing.

Any book mailed for retail price.

THE VETERINARIAN.

The Quarantine and Veterinary Bills.

[Written for the RURAL PRESS by W. G. HODSON.]

There are before the Legislature of California two bills which are of vital importance to cattle-raisers, horsemen, and the public at large.

Senator Heacock expressed himself last week as of the opinion that the Quarantine Act forwarded by Dr. Thos. Bowhill was one of the finest pieces of work ever submitted to the Judiciary Committee. The bill is entitled: To regulate the quarantine and the admission of cattle into the State of California from infected districts. In conjunction with this bill, the Judiciary Committee have also considered the advisability of taking some sections from the Illinois Quarantine law; to suppress and prevent the introduction and spread of Texas or Spanish fever, pleuro pneumonia and other infectious diseases among cattle.

It is unnecessary for me to urge the importance of such an Act at the present time, because our legislators are aware of it. Immense numbers of cattle are dying of Texas fever on some large southern ranches of this State. There is also black-leg, anthrax and actinomycosis—a goodly array, to which we may add tuberculosis. The latter is infectious; a herd of cows confined together may take consumption from one old stager whose lungs are rotten with tubercle.

What it is necessary to urge is, that all endeavors made by the Legislature of California to suppress infectious disease among cattle must have the co-operation and sympathy of all the people.

Dr. Bowhill in writing to Mr. Edward Smith, secretary of the State Board of Agriculture, well says: "The accompanying draft covers all the ground necessary to prevent the entry of Texas fever, pleuro-pneumonia, etc., into this State. Large cattle-owners may oppose the bill for selfish reasons, but it is absolutely essential to protect the small cattle-owner who has nothing else to depend upon but his small band of cattle, and who is, as a rule, the heaviest loser, because the wealthy cattle-owner drives his Southern steers across the poor man's ranch, and while they get fat and crack up their heels, all the native cattle which cross the trails during a period of 90 days take the Texas or Southern fever, and die. Unless something is done to remedy this evil, we will more than likely have permanent infection, if such is not already the case."

I may say that the above letter was not intended for general circulation, but as it has found its way into print, I do not hesitate to give it.

The Veterinary Act.

Great advances have been made of late years in the education and standing of veterinary practitioners. Such names as Bollinger, Gerlach, Rivolta, Fleming, with a host of others (including Pasteur), which might be given—men whose discoveries will be of lasting benefit to the human family.

Inasmuch as many fatal germs have been proved to be interchangeable between man and beast, and this mainly through researches made by veterinarians, and inasmuch as a climate such as the Californian is but too well adapted to their rapid development, it is high time that a mutual effort should be made among its veterinary surgeons to assist each other, to educate each other and to elevate each other.

The present Veterinary Medical Society has been formed for such a purpose, and has been already recognized by the Governor and the State Board of Agriculture. Members have been admitted to this society who have practiced veterinary surgery in California, and in cases where they held no diplomas from recognized colleges, a board of examiners under the presidency of Dr. Thos. Bowhill has given applicants for membership a thorough examination before admitting them.

Under the proposed Act, veterinary surgeons already practicing and holding no diplomas, will, on passing the required examination, have all the privileges of those practitioners who may be admitted by diploma. The power of conferring a license to practice in this State to be in effect until January, 1890, after which time it is hoped that all those residing in this State will have full qualifications.

To exclude competent but non-graduate men already practicing veterinary surgery in this State—some of them for many years past—would be a hardship which was avoided in the bill to regulate medical practice.

California is admirably adapted to the raising of a high grade of stock, and to the breeding and training of horses. A good practice and fair remuneration is sure to await every veterinary surgeon whose merits may have a claim on the public.

San Francisco, Feb. 12th.

A Prosperous Concern.

[Special to the Evening Post.]

ORANGE, Mass., Feb. 8, 1889.—The New Home Sewing Machine Company, whose factory is located here, is in a flourishing condition. Their business is good and their machine popular.

The report telegraphed on the 6th instant from Bridgeport, Conn., regarding this company, was false, and probably was intended to refer to another concern.

FRUIT MARKETING.

Selling Florida Oranges.

EDITORS PRESS:—The experiment of shipping Florida oranges in "bulk," it may interest some of your patrons to know, is proving to be surprisingly satisfactory, in delivering the fruit to us, by freight, about six days' transit, in decidedly better condition, and, contrary to expectation, in more desirable, more salable shape than the packed fruit. Their better condition in "bulk" is due to better ventilation (not being confined in paper and box), and we find they sell better because buyers see at a glance just what the fruit is; and they prefer to pay "so much" per thousand visible oranges than take risks on the fruit hidden in paper and box, which can be only partially examined. Bulk shipping is a desirable "new departure" for us, as it shows up the oranges for quick and meritorious sales, and it is certainly a profitable change for the shipper, in that it saves him time, labor and expense of sizing, wrapping, and boxing, and the sounder fruit better displayed commands the advantage in this market.

Oranges are doing decidedly better with us since apples are largely out of the way. The Florida crop has been of poorer quality than usual and is mostly marketed.

The foreign supply in our Eastern ports and en route for this month so far as at present advised is about as follows:

New York 160,000 boxes and 5000 cases; Boston, 30,000 boxes; Philadelphia, 15,000 boxes; Baltimore, 10,000 boxes; from which it

CULTIVATOR INVENTED BY L. P. HELMER OF WATSONVILLE.

is self-evident that Philadelphia will soon be dependent upon reshipments for her proportionate supply according to population and trade of these markets, and therefore we should have the best market for California Eastern shipments by March. For directions as to lining, loading, and ventilating car bulk oranges, let shippers apply to

PANCOAST & GRIFFITHS,
11 South Water St., Philadelphia.

The Helmer Cultivator.

California boasts of many local inventions admirably adapted to the special uses for which they are designed. We have local makes of plows, cultivators, harvesters, etc., which are a credit to the inventive genius and mechanical skill of Californians. One of the latest illustrations of local ability in the line of agricultural inventions is the Helmer cultivator, shown in the engraving used herewith. It is the invention of L. P. Helmer of Watsonville, and was patented August, 1888. The following is a description of the implement:

This cultivator is especially adapted to be used in orchards, and when so used it is often desirable to have the front plow, which runs close to the tree, to sink but slightly into the ground, so as not to touch the roots; while it is desirable to have the rear plows, which are farther away, to plow more deeply. It is claimed that this is readily effected by the Helmer cultivator.

With the attachment of the tongue, the cultivator can be run close up to the tree, with the team entirely away from the limbs.

Owing to the fact that the Helmer cultivator has only one row of plows, it will run on a hillside in a straight line as well as on level ground; whereas in cultivators having two rows, the tendency is to crowd down-hill, and the consequence is that the lower row plows much the deeper.

There being no seat on the Helmer cultivator, there is nothing in the way of the limbs of the trees, and the position of the driver being in the rear, he can easily manage the team.

Owing to the swivel attachment of the tongue, there is no perceptible side draft, and its use will demonstrate the fact that this cultivator has a lighter draft than any other machine of the same size in use.

This cultivator is easily handled with one span of horses.

Correspondence concerning the cultivator can be addressed to the inventor, L. P. Helmer, Watsonville, Cal.

San Bernardino Citrus Fair.

A Citrus Fair, under the auspices of the local Board of Trade, opened at San Bernardino on Wednesday, 13th instant, and will continue one week.

Riverside, Redlands, Highland, Colton, Ontario and other sections of the county vie with each other in making fine displays in the Van Dorin block.

Excursions are to be run from Los Angeles and Pasadena, Santa Ana, San Diego and other points on the line of the Santa Fe and S. P. railroads.

The fair is under the management of that veteran in the business, L. M. Holt. The Press acknowledges the receipt of complimentary season tickets, and hopes the exhibition is proving, as its promoters meant it should, one of the finest ever held in California.

From Mendocino County.

EDITORS PRESS:—Farmers here are through seeding and are anxiously looking for rain, late-sown grain being badly in need of it. Early-sown is looking finely.

Fruit-raising is receiving more attention than formerly, but the scarcity and high price of nursery stock prevents some from completing their orchards as intended.

Pasture is good and stock doing well, with no loss so far except from varminets. Coyotes have

California Products at Chicago.

CHICAGO, Feb. 13.—Because that arrivals of oranges have been slightly larger, buyers are holding off with a view of purchasing a shade lower. Receivers, however, are adhering to previous prices. California, \$3 box, \$3.50; do, Navels, \$5@6.

California dried fruits remain very quiet. Sun-dried peaches are offered and found very dull and weak, no one caring to purchase. Evaporated peaches also rule dull and slow; about the only kind of fruits wanted is choice apricots and raisins. These descriptions meet with fair sale and rule steady.

Apricots—Evaporated, bleached, bxs, 13@14c; do, sun-dried, bleached, bxs, 9@12c. Apricots, sun-dried, unbleached sks, 7@9c. Peaches—Evaporated, bleached, unpeeled, bxs, 7@8½c; do, sun-dried, bleached, unpeeled, sks, 6@7c; do, unbleached, unpeeled, sks, 4@5c; do, sun-dried, peeled, bxs, 10@12½c; do, peeled, sks, 10@10½c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 9@10c; do, sun-dried, sks, 8@9c; do, red, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, sks, 6½@7½c. Plums—New, pitted, 7½@8c; new, unpitted, 4@7c. Prunes, according to size, in sks, 5@9c; do, Silver, 10@12c; do, Hungarian, sks, 3@3½c.

Raisins—Loose Muscatels, new, \$ box, \$1.10@1.50; do, London layers, new, \$1.75@2.25.

Hops continue in fair demand. A steady to firm feeling is maintained. Stocks are only moderate and receipts are small. Washington Territory, good to choice, 18@22c; do, red tinted, 15@17c; do, common red, 12@14c; Pacific Coast, fair to prime, 18@20c; do, choice, 20@22c.

Beans are rather easy, for arrivals lately have been fair, while at the same time trade is not badly in need of stock. The demand is limited. California pea beans, \$1.75@1.85 per cwt.; do, Lima, 4½¢ per lb.

SEASON OF 1889.

COOK STOCK FARM.

STEINWAY 1808.

Three-year-old; record, 2:25. Sire of Strathway, 3-year-old; record, 2:26. Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19; and 25 others with records better than 2:30, and the dam of 5 with records from 2:18 to 2:28.

First dam Abbess (dam of Solo, 2:28) by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; he by Halcorn, a son of Virginian. Second dam by Marshal Ney; he by Imp Emancipation. Third dam by Bertrand, a son of Sir Archy.

Steinway full brother to Solo, 2:28, and Soprano (the dam of C. F. Clay, 5-year-old stallion, record, 2:18); also Eminence, 4-year-old, record, 2:21, and Stockbridge, 2:28.

TERMS, \$100 for the season.

CRESCO 4908.

Full Brother to SPARTAN, 2:24.

Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19, and 25 others with records better than 2:30, and of the dams of 5 with records from 2:18 to 2:28.

First dam Alla, record 2:32 (the dam of Spartan, 2:24), by Almont, sire of Fanny Witherspoon, 2:16; Piedmont, 2:17, and of the dams of J. T. Thompson, 2:17, and Catchfly, 2:18. Second dam (the dam of Henderson, 2:27) by Brignoli, a son Mambrino Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:23. Third dam by Cripple, a son of Medoc (thoroughbred). Fourth dam by American Eclipse; he by Duroc.

Strathmore by Rysdyke's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trinkett, 2:24, and Tamboul, 2:14; Almont by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambrino Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:08; and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 6th heat, 2:26.

First dam Katie G (the dam of H. B. Covey, 3-year-old trial, 2:27), by Electioneer, the sire of Mansineta, 2:16, and of Sunol, 2-year-old record, 2:18, and of eight others with records of 2:20 and better. Second dam Fanny Malone, record, 2:36, trial, 2:23, by Niagara (sire of Cobb, 2:31, double team record, 2:20), and of Lady Hoag, trial, 2:45. Said to be by Mambrino Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No 584 E. C. B. Stud Book.
Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189).

First dam by Sportsman (291).

Second dam by Luck's All (188).

Third dam by Cardinal (47).

Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.
Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" cases, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire beating 20 others.

First dam Whalebone (355), first premium Gt. Yorkshire.

Second dam by Luck's All (188).

Third dam by Summercock (302).

Royal Studley is a very handsome, bright bay, 16; hands high, weight 1600 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLEON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 243; he by Master George 203, by King George 160; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Teesdale, and second premium at Bowes, England, in 1886; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

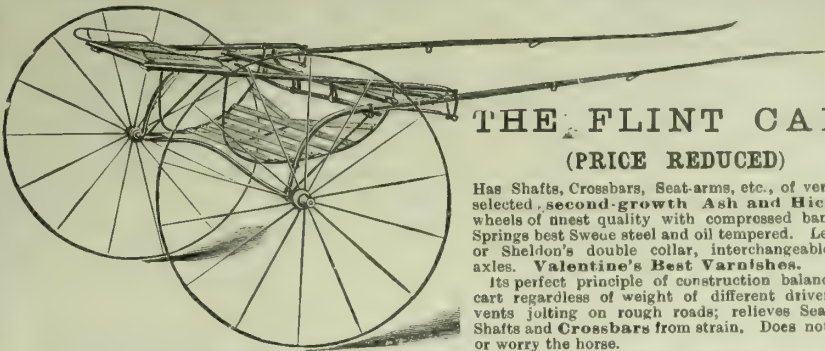

Mares sent to Fashion Stables, Oakland, Benne's Stables, Martinez, or to Geary & Grindie's Stables, Hayward, will be forwarded to Farm free of Charge.

Address:

COOK STOCK FARM,

DANVILLE, CAL.

LIGHTEST, STRONGEST AND EASIEST RIDING.

THE FLINT CART
(PRICE REDUCED)

Has Shafts, Crossbars, Seat-arms, etc., of very best selected, second-growth Ash and Hickory; wheels of finest quality with compressed band hub Springs best Sween steel and oil tempered. Leggett's or Sheldon's double collar, interchangeable steel axles. Valentine's Best Varnishes.

Its perfect principle of construction balances the cart regardless of weight of different drivers; prevents jolting on rough roads; relieves Seat-arms, Shafts and Crossbars from strain. Does not chafe or worry the horse.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing
 the positions and actions of sick
 horses Gives the cause, symp-
 toms and best treatment of dis-
 eases. Has a table giving the
 doses, effects and antidotes of
 all the principal medicines used
 for the horse, and a few pages
 on the action and uses of me-
 dicines. Rules for telling the
 age of a horse, with a fine en-
 graving showing the appearance
 of the teeth at each year. It is printed on fine paper
 and has nearly 100 pages, 7 1/2 x 5 inches. Price, only 25
 cents, or five for \$1, on receipt of which we will send
 by mail to any address. DEWEY & CO.,
 920 Market St., S. F.

GOULD'S SPRAY PUMPS

With Bamboo Extension all fitted up, complete with Hose, Barrel and Spray Nozzle.

This cut shows in faithful operation our Gould's
 Spray Pump; they are utilized for spraying Fruit
 Trees, Orange Groves, Vines, and in fact, all Trees or
 Shrubbery infested with the destructive insects which
 infest and do so much injury in Orchards, Vineyards,
 Orange Groves, etc. They are made entirely of brass
 with the exception of frame and handle, and are
 strong and heavy; the valves being made entirely of
 metal will not be affected by the corrosive solutions,
 such as Caustic Soda, Acids, Lye, or any other solu-
 tion that may be used to kill the destructive insect.

NOTICE.—ONGERTH'S LIQUID TRAP PROTECTOR is
 the best Spray for killing Red Scale, Black Scale,
 White Cushion Cottony Scale, San Jose Scale, or any
 other insect.

Send for special circular and prices.

DELINQUENT SALE.

Grangers' Bank of California.—Location
 of principal place of business, San Francisco, California
 NOTICE.—There is delinquent upon the following de-
 scribed stock on account of installment No. 7, levied on
 the 8th day of January, 1889, the several amounts set
 opposite the names of the respective shareholders, as
 follows:

H. J. Lewelling, Trustee for Lewis L. King, No.
 Certificate, 3067, for 50 Shares\$500 00
 H. J. Lewelling, Trustee for Clinton S. King, No.
 Certificate, 3068, for 50 Shares..... 500 00
 H. J. Lewelling, Trustee for Elva C. King, No.
 Certificate, 3069, for 50 Shares..... 500 00

And in accordance with law and an order of the Board
 of Directors, made on the 8th day of January, 1889, so
 many shares of each parcel of such stock as may be
 necessary will be sold at public auction, at the office of
 the Bank, Northwest corner California and Battery
 streets, San Francisco, California, on Thursday, the 7th
 day of March, 1889, at the hour of one o'clock P. M. of
 said day, to pay said delinquent installment thereon, to-
 gether with cost of advertising and expenses of the sale.

THE STODDARD BARREL CHURN.

WITH PERFECT COVER FASTENING.

The Pride of Every Well Appointed Dairy.

MADE OF BEST SELECTED OAK.

PERFECTLY FINISHED BOTH INSIDE AND OUT.

SUPERIOR TO ALL OTHERS!

The above cut represents a bowl of butter as taken from the Stoddard Churn in "granular form." This method of handling butter is now practiced by the best butter makers of this country, and we give printed instructions with each churn we sell. The grain of the butter being perfectly preserved, also adds to its keeping qualities.

If you have never tried this method, get a STODDARD CHURN and commence at once, and see how much your butter will be improved in QUALITY and QUANTITY.

Although at first we found our customers attached to the old Box Churns many had used here so long, we succeeded in placing Barrel Churns in leading dairies in most localities, and these almost immediately created a demand for the STODDARD, which has required our importing them in full carload lots, and they are to-day almost the only churn a well-informed dairyman will consent to use.

By an ingenious device for fastening the cover, it is removed in an instant with one hand, and replaced as quickly. By pressing down on the handle attached to the eccentric, the inner ends of the levers are depressed, thus elevating the outer ends against the hooks; the outer rim of the cover being the fulcrum, thus pressing the cork packing on the inside of the cover on to the galvanized iron ringhead in the end of the barrel, making it air-tight. It never leaks.

The handle is so attached to the eccentric that it can be adjusted for any wear on the cork packing, increasing the pressure as the cork becomes worn, thus always making a tight joint.

It is simple in its construction, and has no parts liable to get out of order. Being air-tight, the cream is not affected by the temperature of the room while churning. The STODDARD meets the requirements of large or small dairies, and is offered at a price within the reach of all.

PRICES, DAIRY SIZE.

No. 1. Ten-Gallon Churn, churns from 1 to 4 gallons cream.....	\$ 8 00
No. 2. Fifteen-Gallon Churn, churns from 2 to 7 gallons cream.....	9 00
No. 3. Twenty-Gallon Churn, churns from 3 to 9 gallons cream.....	10 00
No. 4. Twenty-five-Gallon Churn, churns from 4 to 12 gallons cream.....	12 00
No. 5. Thirty-five-Gallon Churn, churns from 5 to 16 gallons cream.....	14 00
No. 5 1/2. Forty-five-Gallon Churn, churns from 5 to 20 gallons cream.....	17 00
No. 6. Sixty-Gallon Churn, churns from 6 to 28 gallons cream.....	20 00

The above is an illustration of the Stoddard Power Churn, with heavy frame and tight and loose pulleys. We furnish these without frame when so desired.

PRICE LIST OF FACTORY SIZES,

Including heavy frames, iron bearings, and tight and loose pulleys as shown above.

No. 5 1/2. Forty-five Gallon Churn, churns five to twenty gallons cream.....	\$22 00
No. 6. Sixty Gallon Churn, churns from six to twenty-eight gallons cream.....	25 00
No. 7. Ninety Gallon Churn, churns from ten to forty gallons cream with tight and loose pulleys.....	40 00
No. 8. One Hundred and Twenty Gallon Churn, churns from ten to sixty gallons cream, with tight and loose pulleys.....	60 00

Since the STODDARD BARREL CHURN has grown into such favor, dealers in general wares are preying upon its reputation by selling inferior makes simply on the strength of their being made on the barrel principle, but of poor material and cheaply put together, roughly finished, etc.

Every dairyman knows the importance of a perfect cover fastening, of sound material and careful finish, in a churn above all things, and as we can only find all these in the STODDARD we offer them instead of the cheap barrel churns other firms are urging upon their unsuspecting customers.

Hawthorne and His Famous Family.

Speed in the horse was never such a valuable article as at present, nor the popular appreciation of it so widespread. The result is that all

of our most far-seeing citizens have for years given to the production of speed-horses, and with such notable success that California-bred trotters with good ancestry are being sought by breeders from all parts of the country.

place first Hawthorne, one of the most fashionable-bred trotting stallions in the United States, whose portrait adorns this page. Hawthorne was bred by J. W. Knox and brought to California as a weanling. He is now 11 years old,

lah I, by the same sire as Rysdyk's Hambletonian—making three crosses of Hambletonian.

Hawthorne's sire is a brother of Maud S (2:08½). Hawthorne has proved himself a great sire, and his progeny have brought high figures.

STANDARD TROTTER HAWTHORNE, OWNED BY L. U. SHIPPEE OF STOCKTON, CAL.

enterprising breeders who have secured good blood and used it wisely find their breeding enterprises more promising in point of pecuniary reward than they ever anticipated, because as the popularity of the best trotting blood grows, the demand to share in its possession naturally increases. California is enjoying now the fruits of investments and breeding skill, which some

We take pleasure in presenting to our readers this week portraits of two fine animals which are representative of the stud of one of our foremost breeders, Mr. L. U. Shippee of Stockton, president of the State Board of Agriculture and of the San Joaquin District Agricultural Society, of whose farms and stock an extended account is given on another page. We

a dark bay, 15 hands and 3 inches high, and weighing 1260 pounds. He is of splendid form and symmetry and is counted by experts to be one of the best exponents of the true trotting type. Hawthorne is by Nutwood, dam by Goldsmith's Volunteer (sire St. Julian 2:11½), by Rysdyk's Hambletonian. His granddam was by Rose's Abdallah Chief, he by Abdal-

A chestnut filly, ten months old and full sister to Tempest, who will be mentioned presently, has just been sold to Mr. Campbell of Kansas at a very long price. Mr. Shippee's estimate of Hawthorne's quality as a getter of trotters can be seen by reference to the description of his farm on another page, where a long string of
(Concluded on page 185.)

THE FIELD.

An Essay on the Jackrabbit.

In writing about jackrabbits I am conceited enough to say at the outset that I am convinced that if every farmer knew as much about the rodent as your humble servant he would not be so numerous by a considerable majority. Of course, I don't claim to know all about him, nor half for that matter, but I have killed so many of him that my experience has taught me considerable not known to ordinary people, and I will try in this short paper to show up a few points on the subject.

The excuse I offer for looking into the subject of jackrabbits is that they are the greatest pest known to the farmer in California. We who raise wheat on a large scale do not notice their ravages so much; but they eat and destroy lots of grain just the same. I heard a Williams farmer say once that six jackrabbits would consume as much wheat as one sheep. This is probably so, although they eat a few grains here and there so as to leave scarcely a mark. But if all the jackrabbits in a big field would congregate and eat in one place, it could be seen easy enough, to say the least. Now a man who understands something of their queer ways can take his gun and dogs and kill four times as many jacks as a person who knows nothing about the subject; and it affords true sport, too.

Our jackrabbit is really a hare, but it differs from the English sort. There are a good many species, and may be more than one in California for all I know. As close to us as Arizona there is a gigantic species which looks as big as a burro off a ways. If this fellow can eat as much and bark trees as high in proportion as our own little specimen, he would be a bad sort of giraffe to have round. There is a hare called Bairds, I believe, that is a curiosity in the animal world from the fact that both the male and the female suckle their young. The Australian rabbit we hear so much about has been taken there only a short time from England. The Englishmen imported him for sporting purposes, but he found such a congenial home in the bush and multiplied at such lightning rate that big sums are now being offered by the Australians to any one who will put a brake on.

I don't know whether Pasteur's manufactured disease worked exactly right or not, but not long ago I saw in the press that he had acknowledged the receipt of \$25,000 for his pains. Apocryphos of this there is a dreadful disease natural to the rabbit that now and then lays them out by the thousands. Not long ago in Eastern Oregon it got among them and raged with such violence that it devastated the entire vicinity. Rabbits were found dead in all directions. There is at present a standing offer of \$100,000 in Australia to any one who will produce a thorough remedy. Might not this rabbit plague work as well at the antipodes as it did in Eastern Oregon?

If we ever go to raising trees and vines in this upper country, we will feel the necessity of getting rid of every rabbit possible. One rabbit can ruin a tree worth \$5 or \$10 in a single night, by putting a ring around it. The best way to hunt these successfully in this part of California is with a shotgun and three dogs—two hounds and any ordinary sort of mongrel to scent them out of their forms; then, if the hunter knows some of their nature, he should bag every three out of five, if they are not too thick. That particular trick called doubling, which is practiced by some animals that rely on strategy and swiftness of foot for escape, is understood to perfection by the hare. He can beat a foxhound at this game, because he is smaller and swifter and can take advantage of any little bunch of weeds or inequality of the ground to dodge behind and regain his old trail. Even on perfectly level ground, where there is nothing to work around, the hare can out-dodge anything in existence, and the reason is not far to look for. His ears, which amount almost to wings, do the business. By a slight adjustment of one or the other he is aided to the right or the left like a dart. The movement is so slight and quick as to hardly be discernible, except when the hare is nearly run down, when the movement of the ears is correspondingly slow and can be seen by any one.

This is why a single hound, no matter how swift, is always at a great disadvantage, and will soon wear himself out if allowed to chase rabbits unaided; he having to wear the jack almost out before picking him up, unless by a happy chance. The originators and breeders of the hound should have bred for a tail (his steering apparatus) four inches broad and light and flat, if they ever intended for him to keep pace with the twists and turns of the hare.

Jackrabbits hardly ever double their trail unless very closely pressed. When the man with the gun and dogs jumps a specimen and the hounds crowd him into a hard, straight away race toward a patch of weeds or other cover, it is the hunter's place to get as near as possible to the trail where he first struck cover. As soon as the jack has made a successful dodge behind a weed or the like, he is going to come back in his tracks as fast and as close to the ground as ever he can leg it. Then is the time to use the gun or an extra brace of dogs. Another rabbit trick which fools the dogs, and often the hunter, is the advantage taken by a jack of a ravine when hotly pursued. This is akin to doubling, and consists in running the

opposite way from that which the hare is pursuing when he disappears down the bank. To make it plain, we will suppose that the rabbit comes to a ditch running east and west. As soon as he arrives on the bank, he will turn and shoot down toward the west, but the instant he is under cover of the bank, he wheels in his tracks and runs east. Now is the time for the man with his gun, if he can cut across and strike the ditch before the jack has passed. This stratagem throws hounds off the course worse than anything else, for they imagine that the jack is just ahead of them, running west at an alarming rate of speed, because they judged from the direction that was taken down the side of the ravine.

A very smart trick, sometimes palmed off by old jackrabbits with lumps on their sides, and who, in consequence, are not so fleet of foot, is, when ousted from their nests by dogs, to run directly over every other rabbit lair in their reach, thus getting such a variety of candidates in the field running in different directions, that the poor dogs are puzzled half to death, during which time the schemer usually escapes. The most remarkable thing I have ever seen a jackrabbit do is to sneak into a patch of milkweeds, throw his head out at an angle and let his ears half down from an erect posture, so as to represent almost exactly the long leaves of the weed. This trick alone should give him top rank among animal strategists. It must have taken ages of past experience for the jackrabbit to perfect such a trick as this.

A defect of the rabbit not known by every one is the fact that from his eyes being placed directly opposite on the sides of his head, he is unable to see an object directly in front, and in consequence not unfrequently butts out his brains while running from dogs against small trees, stakes and the like. When the hare wants to survey an object of curiosity he sits up sideways and uses one eye (presumably the best one) for the work. The hunter who understands this when a jackrabbit is coming directly toward him, whether slow or fast, remains motionless, for he knows that, unless the jack has his wind, he will almost run afoul of him before taking the hint. I have knocked over more than one with a club by taking advantage of this defect. Quite an advantage can be taken by the hunter if he notices which way the jack runs when first started from his hiding-place. If he starts to run straight ahead, he is not going to stop, and the quicker you shoot the better; but if he starts off at either right or left angle he is nearly sure to stop after taking a few hops, thus giving a better chance to the shooter. After all his bad points have been summed up—his tree-barking and vine-eating, his bad watermelon record and moonlight picnic in the family garden—there still remains something to his credit. He is at least a game little animal and he gives an open, straight-away race as long as he can, never taking cover or doubling until the swift hound is rushing him too far beyond his power.—Williams Farmer.

FLORICULTURE.

The State Floral Society.

Rare, beautiful and fragrant flowers graced the rooms of the State Horticultural Society February 8th. They were the offerings of the members of the State Floral Society, who met in monthly session. Beneath a spreading fern the specimens were grouped in harmonious order. Camellias, roses, poppies, double wall-flowers, blackberries with blossom growing and ripe fruit in one branch, and double lilies were features of the large exhibit.

The attendance was much larger than usual, and all indications pointed to the fact that interest in the floral society is steadily growing. Very many ladies were present, and a number of the best known nurserymen had seats in the foreground. Professor Wickson presided. He said the thanks of the members were due to those who had so kindly contributed the flowers. To the different specimens were attached cards bearing names and addresses as follows: Mrs. L. U. McCann, Santa Cruz, early harvest blackberry; Mrs. C. N. Farnan, native fern; P. R. Cunningham, Fruitvale, Papa Gontier; State University, garriga elliptica, Rautzia fragrans, salvia splendens, photinia glabara; Mrs. G. P. Rixford, camellias; David J. King, poppies; E. Gill, camellias; Mrs. L. O. Hodgkins, double wallflower.

Messrs. Stratton and Miller, who were appointed to procure some flowers for displays at the proposed exhibitions of the society, reported nothing had been done, the members not having had a meeting. The committee was instructed to report the best plan for an exhibition. All of the members were in favor of giving exhibitions two or three times a year, and they will work to make the shows successful. It was finally resolved that the matter of exhibitions be determined at the next meeting, and the following were appointed to make the necessary arrangements: Dr. C. B. Brigham; J. H. Sievers, Mrs. G. P. Rixford, Mrs. L. O. Hodgkins, Mrs. Blanche Pratt and Emory E. Smith. These ladies and gentlemen will co-operate with the old committee, Messrs. Miller, Stratton, King and Parker. The exhibitions will be conducted as cheaply as possible, and

the members will do what they can to assist the society by sending in choice flowers free.

An hour was devoted to papers and discussions. Dr. Lorenzo G. Yates of Santa Barbara sent in an interesting paper on "Easily Grown Ferns," which was read by Prof. Wickson. Dr. Yates knows more about ferns than any other man on the coast, and his papers have attracted much attention. Fact and fancy joined make the paper a most interesting one, as entertaining to the general public as to flower-growers. Where legend and tradition gave scope for fanciful description, Dr. Yates was very pleasing. The stories the ancients had of the fern were told, and the strange ideas our forefathers had of the manner in which it was propagated were subjects of interest. The best and easiest manner of growing the fern and its favorite soil were discussed. Dr. Yates asks those who are interested in the cultivation of ferns to communicate with him for an interchange of ideas.

Some of the members related their experience with the fern, so extensively imported from the East, and with no very good results. In the opinion of some the tree fern had been given a too prominent position in the garden, where it did not have the proper protection. The fern grows best in the shade, in cool, damp soil. Cold does not kill it, and the sun is a great enemy of the plant as frost. The wind when it sweeps over the tree fern shrivels the leaves and leaves the plant dead.

Dr. C. B. Brigham read a paper on exhibitions of California flowers. In his opinion, an instructive and interesting display could be made in this State. Certainly no section of the country could show a greater variety. He suggested that the showcases should be as plain as possible, as painted woodwork detracted from the beauty of the flowers. Glass bottles sunk in a bank of moss would make the best receptacles. The paper of the doctor was received with favor.

Mr. Stratton thought every flower should have a place of its own in the exhibition. He was also in favor of having the shows conducted by amateurs, but Dr. Brigham thought the assistance of florists should be asked.

At the next meeting A. L. Bancroft will read a paper on "Horticultural Registers," "Roses—How to Grow Them," will also be discussed.—Chronicle

HORTICULTURE.

Fruit Study in California.

EDITORS PRESS:—Owing to the unfortunate way we are taught in the public schools, but few people are able to study anything new without great loss of time and effort. To-day there are thousands of people in California who would be glad to study fruit culture if they but knew how to do so.

The law provides for a State Board of Horticulture and for the publishing of reports which are to be sent free to any citizen in California applying for them. These reports are, perhaps, of more value to our fruit-growers than one-half of the works on fruit culture which are for sale in the bookstores; but I think it would not be at all difficult to make them of immeasurably greater value at little, if any, more expense. The first thing to do is to classify our climates and locations. A place in California may be hot, warm, temperate, cool, or quite cold; it may be very wet, moist, medium, dryish, or very dry; it may be on a mountain, a plateau, a foothill, a mesa, or in a high or low valley; it may be exposed or sheltered; it may face any point of the compass; it may be irrigated, get seepage from hills or from ditches or from streams above or under the ground; it may have almost any variety of soil or subsoil; and last, but not least, it may get almost any kind of culture in regular or irregular doses. What folly it is, then, for one who is not acquainted with the climate, location and soil of a place to attempt to say what fruits will or will not do well there.

What would be the best way, then, for the State Board of Horticulture to gather and put into shape what we fruit-growers have learned about California fruits?

I do not know whether I can answer this question correctly, but something like the following would be my plan: Select a fruit for special study, let us say the apricot. Prepare circulars containing questions with a space after each question for the answer. Send these circulars to every grower of apricots to be found in California who will be likely to try to answer the questions carefully and truthfully from his own personal experience and not from hearsay.

These questions should cover every necessary fact about the climate, location, exposure, soil and culture of the writer's apricot orchard; the varieties he has tested, and their comparative value in drying, canning, or for shipping or table use; the root stock of his trees; the age when planted and the date of planting; the distance apart and the bearing of outer trees compared with those near the center of the orchard; the number of pounds each variety bore (approximately) at different ages; the prices obtained for green, dried or canned fruit; the method of handling and marketing the fruit and the cost; the waste in canning and drying; facts about sulphuring and plan used; the culture (including irrigation, if any,) given to the

trees; the pruning and how it was done; and the enemies of the apricot and how to combat them. These answers should be printed in tabular form, and if several hundred were properly classified, almost any one could come to a pretty correct decision as to whether apricots would or would not pay upon his place, and what kinds it might be well to plant.

Experience With Apricots.

Let me give a bit of personal experience. My place is a mountain valley in Ventura county, 16 miles from the ocean and about 1200 feet above the sea. The canyon faces the south and is from 200 to 500 feet wide, with hills east, north and west about 500 feet above the valley. The ocean lies west, the Las Posas valley and the Conejo mountains south. Climate warm and almost frostless. Rainfall from 12 to 20 inches, usually. Not very much fog nor hard winds. Soil very deep and rich and gets winter drainage from the hills. No water, but plowed ground is always moist. In 1884 I planted the following varieties of apricots on peach root one year old, viz.: Early Golden, Large Early, Hemskirk, Moorpark, Peach and Royal. These varieties all do well eight miles from here in the adjoining Santa Clara valley, and were selected by the advice of growers there. The crop in 1886 was not worth mentioning, though I got quite a few Royals. The Early Golden is a complete failure to date. The Moorpark and the Peach apricot averaged eight pounds to the tree in 1887, and about double that in 1888, but were quite large and fine.

The Hemskirk gave me 50 pounds in 1887 and more than twice that in 1888. The fruit was fair size, easy to dry, and good when dried, but poor when eaten from the tree. The Royal gave me 50 pounds in 1887 and from 80 to 250 last year; fruit small, but very nice and sweet, and very good, either fresh, dried or canned. The fruit planted nearest the head of the canyon was better than that planted half a mile below (my orchard is a mile long). The first trees were planted 20 feet apart, but they crossed branches in two years, so they should have been planted at least 30 feet apart.

I have been unable to see any difference in the bearing of those I prune or those I leave untouched, but the pruned trees do not break so easily and the others are easier to pick from. The trees that bear the best, split the easiest at any time of the year. The birds—my apricots' only enemies—batter the Royal apricots the most and the Hemskirk the least. Many of the trees have leaves on yet (Feb. 8), especially those which were closely summer-pruned. The limbs are far redder than in the valleys below, and the fruit is about two weeks later, owing to their keeping the leaves on a month or two longer, I suppose.

All the trees lean toward the sea breeze, which is turned here by the hills into a south wind. The fruit is sweeter than the valley fruit and has a higher flavor, but is not so large nor so juicy and does not, as yet, bear as much to the tree, though as they are making much greater growth, that may be better as they grow older. Still, I do not think the place so well adapted to apricots as to peaches and some other fruits.

Now had I known in 1883 what I know now about the relative value of varieties, I should count myself many hundreds of dollars better off. Like conditions must produce like results, and those who plant trees could know fairly well what to plant if they had access to the experience of those who planted in a similar climate to their own. There is more difference in climates than in soils.

The apricot requires a deep, rich, well-drained soil. But after that is had, it requires still more. Each variety has its own choice of climate where it does the best, and it would not be at all difficult for the State Board of Horticulture to gather and arrange information of the right kind, etc., for each climate, and make the most valuable book to California fruit growers that has yet been published.

Springville, Ventura Co. C. M. DRAKE.

Cross-Fertilization of Almond Varieties.

EDITORS PRESS:—There is a question I would like to ask your readers that may know what I wish to, and that is, who has had any experience with the different kinds of almonds planted for the purpose of cross-fertilization of blooms, to get better results? I will say that the Standard and Languedoc planted alternately will yield double what they will if each is planted by itself. I saw that at Mr. W. W. Smith's at Vacville last June. He had 12 trees in a row—6 Languedoc and 6 Standard, and where the two varieties were the nearest, the trees were the heaviest loaded, and the farther away, the lighter. So at the extreme ends of the row there was about half as many as at the center. Mr. Smith informed me that was the case every year.

Now I do not consider the Standard as good a variety as some others we have. So I ask the question, has any one tried the I. X. L. and Languedoc or the Golden State and Languedoc or either of these varieties with the Drake's Seedling or others? This is a subject every one is interested in that intends planting almonds, and any information on the subject will be thankfully received in this section.

Woodland. J. E. SPRINGER.

[There has been much observation on this

point, and we hope every almond-growing reader of the *RURAL* will write his experience with the close association of any two varieties of almonds.—*EDS PRESS*]

Growth of Trees Without Irrigation.

EDITORS PRESS:—The following are measurements taken at John Rosenberger's place, Antelope valley, Colusa county, Cal., by an agent of the *RURAL PRESS*. All these trees were planted in first-class valley soil and grown without irrigation:

Fig tree planted in 1874: Top 30 feet high by 30 feet in diameter; trunk 67 inches around at smallest place within 2 feet of the ground.

California walnut planted in 1882: Top 25x25 feet and trunk 37 inches in circumference; measurement taken on same plan as with fig.

English walnut planted in 1884: 19 inches in circumference and 16 feet high.

In vineyard near the house an average Tokay vine of six years' age had a trunk 13 inches in circumference.

As this is an undeveloped fruit section, where many thousand acres of such land can be had at its value for wheat culture, your correspondent would be glad to know if these are fair average growths without water. The annual rainfall for past ten years has averaged 21 41 100 inches.

F. S. CHAPIN.

Sites, Feb 13 1889

SWINE YARD.

The Swine Industry—No. 2.

[Written for the *RURAL PRESS* by J. R. F.]

Country-cured hams and bacon are, as a rule, discriminated against by the trade. This prejudiced feeling is due to the cuts not having been properly trimmed and cured for in California's earlier days. The writer has seen as well trimmed and cured country hams and bacon as can be found in any city-packed. It is quite difficult to lay down fixed rules for cutting, trimming and curing, for very much depends upon the condition of the hog, whether fat or moderately fat; but the following will probably serve the most purposes:

After the carcass has been dressed and hung long enough to cool off so as to allow cutting to be done smoothly, the head is cut off, then the ribs are cut with a sharp hatchet close up on each side of the backbone, after which, follow the course of the hatchet with a keen, sharp knife, cutting off the two sides, leaving the backbone strip. Some call the strip the "chine." From the latter, tear off the fat for lard, after which, if desired to cure, cut it in three pieces. Then the hams and shoulders should be cut off and neatly trimmed. This should be done with the utmost care so as to bring out smooth and attractive-looking cuts. In trimming the hams and shoulders, the fat cut off should be put in one vessel to try out for lard, and the lean mixed with fat put in another vessel to make up into sausage. The sides or "middlings," if desired to be marketed, should be cut up in convenient sizes, taking care to have each piece of as uniform thickness as possible. But before doing this, the tenderloin should be torn from the sides. The tenderloin is generally eaten fresh or made into sausage. The head should be cut into halves. Put the jowls in with the meat to be cured. From the faces, trim the eyes, ears and snouts. Some of these can be put in with the jowls, and with the remainder the following can be done: Boil one face, one heart and one liver until the meat drops apart, which strain; then pick out fragments of bone, run the meat through the sausage-mill, season to the taste, when you have what is known as "pudding." This fat to be heated when eaten. The water in which the above was boiled can be utilized as follows: Thicken it to about the consistency of mush, with three parts of cornmeal and one of buckwheat meal or flour. This mixture should be put into shallow basins, and, when desired for use, it should be cut into slices and fried. This by those who make it is called "scrapple," and is considered quite a delicacy.

Returning to curing the meats: If it is desired to have the hams and shoulders sugar-cured, the following is claimed to be the best process: Dry-salt them on a table, bench or raised boards in the cellar with the following mixture: 10 pounds of good packing salt, 4 pounds of brown sugar and 2 ounces of saltpeter to each 100 pounds of meat. Lay the outside down, and rub on all of the mixture you can make stay on. This should be repeated as often as it is absorbed. As a rule, only four or five applications are required. In from four to five weeks they will be ready for smoking. Smoke them a nice brown. Let them dry off well, after which put them in a bag. After bagging, the bags should receive a good coat of whitewash, and hang them up in some cool, dry place, and no one will know them from the best city cured. They can be kept in the bags until ready for market, when they can be boxed and taken to the nearest trading point to be sold.

It is claimed by experienced packers that side pork is better dry-salted than if put in brine. For this mixture it is only necessary to use one-half of the quantity of sugar that is

used with hams. Pack the sides in a cask with plenty of salt, and brine will form. Keep them in the casks from six to eight weeks, after which time they can be hung up in the smoke-house until ready for use or marketing.

There is a very palatable dish made on many farms, viz., souse. This is usually made as follows: Take the ears, feet and nose, and, after scraping them well, soak them in cold water for several days. At the end of that time they should be scraped again, washed and put to soak in fresh cold water for a day or two longer, when they are taken out, and, together with a hog's head, put into a big kettle and boiled until the meat may be easily separated from the bones. They should be boiled in plenty of water so that the oil may rise to the top and be saved, for hog's-foot oil is considered very valuable on a farm. When the meat is thoroughly done and the oil has been removed, the former is taken up in wooden bowls, the bones carefully picked out, the mess well kneaded so as to make it smooth and light-colored, and the whole seasoned to the taste with salt, pepper and sage. Before it is cold, it should be poured into molds, where it assumes the consistency of jelly. This is considered quite a delicacy.

To make good lard is quite a science, but when one is initiated into the art it is easily done. The day following the killing of the hogs, the fatty portions are rendered into lard. The fat should be divided into three classes—the entrail, the leaf and the meat lard. When the entrail lard is carefully prepared, it is as white as any; but, although perfectly sweet and free from any unpleasant flavor, it does not keep as long as the other two kinds, and therefore should be used first. What is called "leaf lard" lies in flat, white slabs close to the ribs on the inside of the hog. This is almost pure fat and cooks quickly. Meat lard is made from fat meat, and, owing to its taking longer to render or try out, has a creamy color. The secret of making nice lard consists in washing each piece thoroughly in cold water, removing all impurities which will tend to discolor it and having the boiling kettle scrupulously clean and free from rust. The kettle should contain a few gallons of boiling water when the fat is dropped in. The latter should be frequently stirred to prevent it sticking to the bottom or sides of the kettle and to prevent scorching. Experienced makers of lard put soda into the lard when the water is nearly evaporated. The right proportion is about one tablespoonful of soda to three gallons of lard. Before using, the soda should be dissolved in a few spoonfuls of water, and put in a small quantity at a time, for fear the effervescence would cause the liquid to boil over and thus set the whole on fire. The advantage in using soda is said to be that it makes the grease come out of the cracklings and neutralizes any acid they may contain, thus making the lard keep better. When the cracklings assume a light-brown color, the kettle should be removed from the fire, the clean lard then drained off to cool and the cracklings pressed. By the more experienced lard-makers it is asserted that pure lard will not boil, therefore as the bubbles grow faint the lard is said to be cooked enough.

Sausage is a dish made in various ways. In this city, retail sausage-makers take about one-half of lean beef and one-half fat pork, and, after running them through the sausage-mill separately, then run them through together so as to mix the two ingredients. On the farm, the best and most approved method of making sausage is as follows: After the trimmings and tenderloin—the greater the proportion of the latter the better the sausage—have been run through the mill, the meat is spread on a table and the seasoning is thoroughly worked in in the following proportion: To every nine pounds of meat use three teaspoonfuls each of salt and pepper—if no pepper is used, then three of it to six of salt—and twelve teaspoonfuls of powdered sage. The teaspoon should be full, not heaped up. Take a cake of the sausage and fry it to test the seasoning, and, if suited to the taste, then run the meat again through the mill so as to more thoroughly mix in the seasoning. After this, pack tightly in jars and pour melted lard over it to exclude the air, and then set the jars in a cool place until the sausage is required.

To Swine-Breeders.

EDITORS PRESS:—The following circular letter to the swine-breeders of America has just been issued by the Executive Committee of the National Swine-Breeders' Association:

The last annual meeting of the National Swine-Breeders' Association was one of unusual interest. The Executive Committee is about publishing the papers read on that occasion by Prof. W. A. Henry of the Wisconsin Experiment station; Prof. J. W. Sanborn of the Missouri Agricultural College, and J. W. Pierce, Esq., of Peru, Indiana, together with the discussions following each; also the other proceedings of the meeting in full. The report will contain also a complete list of the members of the association to the date when the last pages go to press. To each member will be sent, postpaid, a copy of the report as soon as issued.

The constitution of the association provides that any reputable breeder or feeder of swine, or any State swine-breeders' or swine record association, may be admitted to membership in this association by the payment of \$1. The annual dues of members are \$1 each. The

list of members has been growing steadily each year, and now with the brightest outlook before them that American breeders have had in many a year, there is no reason why they should not take new courage and join hands in the National Association for mutual aid and instruction in the most approved methods of placing on the markets of the world the best pork products that intelligence and skill can supply.

PHIL M. SPRINGER, Sec'y.

Springfield, Ill.

THE APIARY.

Bees and Fruit.

EDITORS PRESS:—In a recent issue in an article on the date-palm of Mr. Wolfskill's propagation, I note what is said of the difficulty of fertilizing the fruit blossom. Allow me to suggest to this venerable horticulturist, and others interested in the cultivation of this valuable food, an idea. I am of the opinion if a few swarms of bees were located in near proximity, say a quarter or a half mile, there would be no failure on the part of the fruit to perfect 90 per cent of the berries. The busy little bee going from the male to the female plants with his basket of pollen and rubbing about in the flora of each completes the work which Nature for some reason has left to be performed by an outside agency. The date must be, I am quite sure, a honey-producing plant.

Note the economy of the method I propose. While it eclipses in its completeness the bungling manipulation of the human species, it also harvests the nectar which would otherwise be "wasted upon desert air." The prejudice of fruitmen is so strong and deeply rooted that I fear my suggestions will go unheeded. Often a bigoted people in the present stage of progress and radical change lay a charge at the door of innocence and persecute even unto death. If the sins which are charged to the busy bee were laid at the doors of the guilty, our friend might escape; but the fact that he is found in bad company condemns his case without further investigation. Remove all birds and other pests that prey upon your fruits, and convert your orchards into an apiary, and I'll wager you suffer no loss. Our best authorities claim, and I think correctly, that the bee never punctures the fruit, but follows rapidly any other agency which has commenced the work of destruction, repairing the damage so far as his manipulations are concerned by collecting the nectar and sealing it in the tiny jars for the future use of his persecutors, who in their blindness and ignorance heap indignities upon his defenseless head for these good offices.

As the Scotch poet says, "Man's inhumanity to man makes countless thousands mourn," so his inhuman treatment of his benefactors in the brute and insect life is the cause of untold mourning.

Canfield Bee Ranch, Baker-field

Loss of Queen.

EDITORS PRESS:—It is a matter of great importance to a bee-keeper to know at once when a queen is lost. During the months of May and June the loss of a queen from the hive a single day will make quite a difference in the honey crop. A queen is supposed to lay about 3000 eggs a day, therefore a hive that is queenless for only one day will be just that number of bees short, and if this happens during a honey flow, of course there are that number less to gather the crop. Be careful not to drop the queens off the combs when handling them at this time of the year. A queenless hive may be known by the way the bees are acting on the outside; if they are standing about on the alighting-board without any bees going in with pollen, it will be best to open the hive and take a look at them. If you find eggs and worker brood, you may be sure a queen is there; but if no eggs or brood is there, the hive has probably some kind of a queen that does not lay. If you do not find one, give them a frame of brood and eggs from some other hive, and if they have no queen they will commence to build queen-cells within 24 hours. When you see these, give them a queen at once, or if none are to be had, they may be allowed to raise one. More hives become queenless from queens being lost on their wedding flight than from all other causes together; so it is well to know at once when this happens.

Feb 13th. Bees should now be busy gathering pollen and breeding and drones flying. I noticed drones flying in my apiary on Jan. 25th. Should be glad to hear, from any other Californian bee-keeper, the earliest date of drones' flight.

W. STYAN.

San Mateo.

Honey and Beeswax.

From the annual review of the honey trade just issued by Schacht, Lemoke & Steiner, we take the following:

A fair crop of honey has been gathered and marketed this season. The quality has also been up to the average, and the price has ruled high enough to be satisfactory to apiarists and dealers. So far as present prospects can be read, the outlook for the next crop is equally good, although fears for a small crop are already entertained. From the 50,000 or 60,000 stands in California, for the year 1888, there was marketed 3,000,000 lbs. extracted honey

and 500,000 lbs. comb honey, or a total of 3,500,000 lbs. for the season. This result compared with former seasons is favorable, as the following figures evidence: 1887, 1,200,000 lbs.; 1886, 5,000,000 lbs.; 1885, 1,250,000 lbs.; 1884, 9,000,000 lbs. A great proportion of this season's crop was shipped by steamer or rail, direct from the apiaries to S. F., as the following statistics show: Extracted, 1,200,000 lbs.; comb honey, 300,000 lbs., or a total of 1,500,000 lbs. This also compares favorably with the receipts of former years, viz.: 1887, 1,300,000 lbs.; 1886, 2,500,000 lbs.; 1885, 2,000,000 lbs.; 1884, 3,600,000 lbs.; 1883, 1,400,000 lbs.; 1882, 1,000,000 lbs.

A better demand and higher price of the article caused much larger shipments of it to be made to Europe this season than were made last year. They amounted by sailing vessel to Europe and other foreign countries to 700,000 lbs., and by sail via New York to 175,000 lbs. The principal part of these shipments went direct to England; the balance to Germany. France did not import any from here during the year. Overland shipments, including those for Europe, via New York, amounted to nearly 1,000,000 lbs., while in 1887 they were 950,000 lbs.; 1886, 2,000,000 lbs., and 1885, 1,270,000 lbs.

Shipments by sailing vessels to foreign market have been as follows for the past eight years:

Year.	Cases, Year.	Cases.
1887.....	2,000 1883.....	6 700
1886.....	7,500 1882.....	3 600
1885.....	8 800 1881.....	9,500
1884.....	16,000 1880.....	9,400

Beeswax—As in 1887, this article has been greatly depreciated in this market. The demand of the Eastern and European markets for it has been very light, though for the last few weeks it has been better than earlier in the season. During the year 1888 there arrived in this market 30,000 lbs.

THE VINEYARD.

Prescriptions for the Mysterious Vine Disease.

Seward Cole of Colegrove, Los Angeles county, writes to the *Los Angeles Times* as follows:

Quite a percentage of the vines of Southern California have succumbed to the "vine disease." To my personal knowledge several vineyards, in which the "sickness" was hardly perceptible in 1887, were so badly affected last year that the crop of grapes was a failure, and more than half the vines were, to all appearance, little better than dead. Unless something is done this year, we will have very few healthy vines by next autumn.

If the open weather continues, the vines will begin to bud in a very short time, and it will then be too late to apply the strong solutions of bluestone (sulphate of copper) or of copperas (sulphate of iron) that have been recommended as efficient in preventing the attack of the disease.

Investigation has shown the presence of fungoid growths on the leaves, canes and roots of the diseased vines, though it has not yet been determined whether the disease is traceable to the fungi or whether the latter (with the germs of which the atmosphere is always full) attack the vines because they are weak and sickly and present conditions favorable to their growth.

In any event, it is advisable to treat all vines with some wash that will destroy and protect from the fungoid germs. The fact that farmers soak their seed grain in a solution of bluestone, and thus prevent the attack of smut in the subsequent crop, should be sufficient encouragement to induce the vineyardists to try it on their vines. Every one should try it for himself, and immediately. There is no time to waste in waiting to see how it will work on somebody else's vines. You may lose your own vines in the meantime. Now as to preparations. Mr. Mirande of Pomona claims to have been very successful last year with the following: Two pounds bluestone, dissolved in a bucket of hot water; three pounds lime, which should be slaked in three gallons of water, and the whole stirred in 50 gallons water. He suggests that a much stronger preparation be used now while the vines are dormant. Jacob Schram, the celebrated vineyardist of Schramsburg, Napa county, told a gentleman from here a few days ago, that he used, with absolute success, a copperas solution, which was better than one of bluestone. Copperas—sulphate of iron—is not only excellent as a fungus destroyer, but also acts as a valuable fertilizer.

Mr. Schram's formula is as follows: Ten pounds of copperas dissolved in boiling water, and then diluted to 50 gallons with cold water. He applies to the vines with a sponge tied on the end of a short stick with copper wire. (Iron wire would soon be eaten by the solution.) It might be well to suggest here that the sponge should be of good tough texture—known by druggists as "sheep's wool."

It is undoubtedly advisable to use lime in the washes, as it holds the bluestone or copperas to the vine, so that it is not washed off by rain, but remains for a long time to perform its good offices. Lime itself has valuable properties as a disinfectant and fertilizer.

I am treating a vineyard with the following preparation, which I hope will prove efficient: Five pounds bluestone, 5 pounds copperas (both dissolved in hot water), 10 pounds lime (slaked), the whole diluted with water to 50 gallons. Applied with a sponge on a stick, wetting each vine quite thoroughly. Later in the season, "when the leaves have come out well on the vines and there is no danger of harming them by the wash," as Mr. Mirande says, I shall sprinkle them with a milder solution.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Greater Inducements for Subscriptions.

NEW RATES for PACIFIC RURAL PRESS.

Annual Subscription.....	\$3 00
If paid in advance, 15 months for.....	3 00
If paid in advance, 10 months for.....	2 00
If paid in advance, 6 months for.....	1 00
Trial subscriptions for three months, paid in advance, 60 cents.	

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Company, publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS, and the California Patron as a monthly,

Resolved, That the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

Notice to Secretaries.

OFFICE SEC'Y STATE GRANGE, }
SAN FRANCISCO, Feb. 19, 1889. }

Some time since we forwarded to the Secretary of each subordinate Grange in California, a blank to be filled out by the Secretary, and to be returned to this office, giving the name of each officer of their respective Granges.

It is important to have a correct and complete list of the newly elected officers at as early date as possible, for reference, and we again especially request those Secretaries who have not as yet reported, to do so at once.

Changes are so apt to be made between the date of election and installation that it is desirable to have a correct and complete list sent after installation from every Grange.

We wish each Secretary would write a few lines, regarding the progress and prospects of their Grange, for publication. Fraternally,
A. T. DEWEY,
Sec'y S. G. of Cal.

Gilroy Grange Again in Line.

MESSRS. EDITORS:—Pursuant to appointment, a meeting was held in Wright's hall, Gilroy, on the 14th inst., for the purpose of reorganizing Gilroy Grange, P. of H. The early-morning train brought from Watsonville Brother and Sister Roache, and later, from the north came Brothers Alley and Sanders with their good wives, to assist State Deputy Roache in reorganizing the Grange. All repaired to the parlors of that excellently managed hotel, the Williams house, where their every want was anticipated and duly administered unto by the genial proprietor, S. T. Purviance, who, by the way, is himself an ex-Patron, and he lost no opportunity to aid and encourage the writer in his efforts to stir up the dormant energies of those interested in the cause of the Patrons of Husbandry.

After lunch all adjourned to the place of meeting, and after some necessary delay, the body was called to order by Deputy Master Roache and Bro. S. P. Sanders was appointed Secretary.

After administering the obligation of our Order to the new members, the election of officers was held with the following result: C. F. Eckhart, M.; Massy Thomas, Jr., O.; Mrs. L. C. Trombly, L.; M. T. Holsclaw, S.; W. W. Beauchamp, A. S.; C. E. Sanders, C.; Geo. Easton, Treas.; C. R. Wilson, Sec.; I. L. Sanders, G. K.; Mrs. A. P. Sanders, P.; Mrs. Capt. Angney, C.; Miss Nettie Withom, F.; Annis M. Sanders, L. A. S.

It was decided to hold the next meeting Thursday afternoon, 1 o'clock, on Feb. 21st, at which time Deputy Master Roache is expected to be present to exemplify the unwritten work for which there was not sufficient time on the day of reorganization.

F. B. L.

Another Promising Grange.

MESSRS. EDITORS:—After a long sleep, Hollister Grange may be numbered with those that are alive, and I have the fullest confidence in its future prosperity. Personal contact with each member of this reorganized body gives me the advantage of knowing something of their qualifications. It is no more possible to form a good Patron of Husbandry out of bad material than it is to construct an implement of husbandry from worthless timber.

The meeting for reorganization was held on the 15th inst. The election of officers for the current year was as follows: For Master, Granville S. Nash; Overseer, Jesse Ross; Lecturer, Geo. T. Elliott; Steward, A. H. Thysen; Asst Steward Gustave

Brown; Chap., V. B. Nash; Treas., Dr. Thos. Flint; Sec., A. Dunlap; Gate Keeper, Chas. Straube; Pomona, Mrs. G. T. Elliott; Flora, Mrs. G. S. Nash; Ceres, Mrs. G. Brown; L. A. Steward, Miss Anne E. Brown.

A. P. Roache, Esq., the official Organizer, was ably assisted by E. Z. Roache, Master of Watsonville Grange.

In the evening, as previously arranged, a number of the brother and sisters gathered at the elegant home of Worthy Master-elect Nash, to witness the rendition of the unwritten work of the Order by Bro. Roache. Impromptu literary and musical exercises followed, each one present offering something for the entertainment. At the approach of midnight, "farewell" was spoken and each repaired to his or her respective lodging conscious of having passed a pleasant evening.

The next meeting of Hollister Grange will be held on Saturday afternoon, 2 o'clock, March 2d.

F. B. L.

To Young Candidates.

We are glad to hear more said at Grange meetings and in Grange circles everywhere urging the pleasure and desirability of having our young folks join the Grange early. The advisability of this, after due consideration at different sessions of the National Grange, determined the highest body in the Order to invite girls to come in at the age of 14, and then later boys at the same age. This is right, placing both sexes on an equality in the Grange. Let no adult Patron fail to do his duty in inviting and making the way easy for younger members of the farm and household to come in and partake of the educational, social and other rare privileges of the Grange.

Michigan's Worthy Secretary Here.

San Jose Grange was addressed February 16th by J. T. Cobb, Secretary of the State Grange of Michigan and editor of the organ of the Grange. He gave encouraging reports of the success of co-operative enterprises in his State. Remarks were made on the same subject by local Grangers.

Bro. Cobb is the long-continued Secretary of the State Grange of Michigan and veteran editor of the *Grange Visitor*, the official organ of Michigan State Grange, which we believe is the only newspaper, except the *California Patron*, ever owned and published for any considerable length of time by the P. of H. in the world.

We hope Bro. Cobb, who was in California a few winters ago, will this time make a longer visit and speak to some of our Granges, who would be pleased to welcome him, in different localities.

Watsonville Grange.

MESSRS. EDITORS:—An old saying and a true one is: "It's always darkest just before day." The truth of this aphorism has again been verified, as all will bear witness who were so fortunate as to be present at the last meeting of Watsonville Grange. While it has always held its own, yet for the last few years it has been stationary. The deep and mighty tidal wave of Grange advancement has here also shown its crested head, and "Onward!" is again the counter-sign. A grand and enthusiastic meeting has just been held, wherein were many brothers and sisters who for years had forgotten the way to the hall, but who now came trooping up the old familiar stairs to receive the old fraternal grip and welcome with God-speed and words of cheer their woman Master. Without witnessing these heartfelt words and actions, one can have no appreciation of how good it is for Patrons to dwell together in unity.

GRANGER.

Watsonville, Feb. 16.

THE CALIFORNIA LEGISLATURE invites the National Grange to meet in the Golden State. Worthy Secretary of the National Grange, Dr. John Trimble, has received an official letter from W. D. Boruck, private secretary of the Governor of California, inclosing a resolution of the Legislature of that State inviting the National Grange to hold its next session on the Pacific Coast. Such action, while highly complimentary to the Grange, reflects great credit upon the intelligence of the California legislators in thus officially recognizing the importance of the only National Organization of American Farmers.—*National Farm and Fireside*.

IRRIGATION DISTRICTS.—The two bills, amendatory of the Wright law and providing for changing the boundaries of irrigation districts, of which we gave an abstract in the RURAL PRESS of February 9th, have passed both branches of the Legislature, received the Governor's approval and become California statutes.

Gilroy and Hollister Granges.

MESSRS. EDITORS:—In proof that the Grange spirit of advancement is genuine, we point with pride to two more returning members to our great family, Gilroy and Hollister Granges. Wednesday, Feb. 14th, found your correspondent at Gilroy, where we were shortly joined by the Master of San Jose Grange, Bro. Alley, accompanied by his wife and Bro. and Sister Saunders; also the Master of Watsonville Grange, Sister Roache, and Bro. Logan of the RURAL PRESS. Found a goodly number of earnest, intelligent Patrons ready for work, and with Sister Saunders for Chaplain, Bro. Alley for assistant installing officer and Bro. Saunders for Secretary, in two hours from the time of commencing Gilroy wheeled her artillery into line, and, with doubly shotted guns, stands ready to maintain her rights. To show what true P. of H. grit was here only slumbering, we have but to mention that, although the Grange had not met for 11 years, all their working tools, books, blanks, seal, with all their regalia nicely folded, and all neatly packed in a large box, were found. After appointing a business meeting for February 21st, Grange closed with a bright prospect for future usefulness.

The next morning our party boarded the early train for Hollister, where the farmers came driving in with their fine teams from all directions. We were soon at work, and ere the sun dipped behind their glorious hills there was forged another link in our fraternal chain, and Hollister, No. 10, will answer to the roll-call at Sacramento. A delightful evening was spent at the elegant home of the newly elected Master, Bro. Nash, who, with his devoted wife, placed us under lasting obligations for their hospitality.

Thus auspiciously begins the new year, with every prospect of so continuing.

GRANGER.

An Infamous Scheme.

The gambling interests of the State of Nevada have caught the unfortunate people of that commonwealth in a trap, and neck and heels propose to enslave them to the most vicious, mean and debasing of gambling schemes, compared with which faro, roulette, chuck-a-luck and hokey-pokey are angelic devices. The Legislature has forced upon the people of that State an election on a proposition to legalize lotteries, on the promise of the gambling ring that a portion of the ill-gotten results wrung from those so weak as to be made victims shall be paid into the State Treasury.

The commonwealth that is in such a strait that it must resort to lottery gambling is ready to die, and ought to be put out of its misery, were it possible to do so. But Nevada is not thus reduced. The law submitting the constitutional amendment was passed and approved January 19th, and the election under it is set for February 11th—less than a month after the enactment, and this, though Nevada is a State of such great distances, and such non-communication, that some of her people will not hear of the election until long after it is over. The new law requires that notices of election shall be posted one week before the day appointed, although even for a school election ten days' notice is required. This is equivalent, says one of the protests, to almost no notice at all, and one-fourth of the people of the State will simply hear from some of their neighbors that there is to be an election, but what for or when they will know little about. The *Silver State* says:

"This is a lightning process for amending a State Constitution, and if the Legislature has not applied for a patent for the method it should do so at once. In this county the board stands adjourned until the first Monday in March. The Commissioners of some other counties, especially Nye, White Pine and Lincoln, will find it as difficult to comply with the law as those of Humboldt, and the voters in the remote precincts, if they hear that an election is to take place, will hardly have an opportunity to ascertain for what purpose."

The business is a "snap game" on the part of the gamblers of Nevada. They believe they can turn that State into a Monte Carlo and draw support for it from California. They boldly argue that Californians send hundreds of thousands of dollars annually to the Louisiana lottery swindle, and that Nevada can just as well catch that drift as not. California is interested deeply in the defeat of this infamous scheme, for if it is not defeated, this State will be flooded with the Nevada lottery advertisements and their ticket-peddlers will swarm in every town and city.

It would be an insult to the intelligence of ordinarily informed people to enter upon argument to prove the evil of lottery gambling. The world knows it to be the most debasing form of gaming, to afford the greatest opportunities for swindling, in fact most State lotteries are robbing games, and all take more of percentage for the game than they give of winnings to the ticket-holders. They are the mills that next to whiskey grind out most of poverty, idleness and woe. They are the foes of industry and the enemies of honest thrift.

One of the protests against the Nevada snap game has these pathetic passages:

"For a hundred years the English nation derived part of its revenues from lotteries, but for the last century such means have been tabooed among all economists worthy the name. Even the Latin races have outgrown the folly. They have been proven by ages of experience to be conducive to bad morals. Vice, idleness, crime and poverty are their natural products.

"The argument that money spent in such follies would be better kept at home, applies equally well to every State in the Union. Why does not California start a lottery? Twenty dollars, perhaps a hundred, goes out of California to every one out of Nevada, and yet there is no proposition to start a lottery there.

"It is freely prophesied that if the bars are once taken down no power the people can avail themselves of will ever put them up again. If this thing has the strength to compel the calling of a special election on a week's notice, in midwinter, to enable its starters to launch it, it is hard to say what it cannot do when once it is fairly under way. It will be the most veritable old man of the sea that the people of Nevada ever got upon their back. No man hostile to it can ever hope to rise in this State, and with the floating element in its politics Nevada can never get clear of it, no matter what outrages it may commit or what disgrace may be put upon her name. She is not in the best odor now among the people of the older States, and this will put a cudgel into the hands of her enemies.

"Upon the decision of this matter rest the most serious considerations affecting the future of the State and the fortunes of generations yet unborn. If they are willing to be the victims of such a job, let them remain indifferent on election day and they will have no occasion to find fault with the efficiency of the machinery or with the promptness and thoroughness of its operations. If, however, they give this cheeky proposition the answer it deserves, it will be notice to the world that Nevada is living in the nineteenth century. That she is up with the times and is cultivating a better civilization than that of a hundred years ago. That her people propose to build a State, not on games of chance or the practices of the harlot and sharper, but upon honest industry and an intelligent development of nature's bounties. Such an answer would elevate her in the eyes of the nation and would be an invitation to her elder sisters in the Republic to give her a helping hand in the work of overcoming the difficulties before her. The American people are generous and sympathetic, and when they see a brave State struggling with the elements and with sturdy morals and honest effort trying to make homes for its people, they will not refuse necessary aid."—*Record-Union*, Feb. 7th.

[We are glad to see that the amendment to the Nevada State Constitution referred to in the foregoing article was defeated by a majority of from 200 to 400. A telegram from Virginia City states that coin was used freely to carry the election by the pro-lottery men, while the anti-lottery men had no funds. The discomfited lottery advocates threaten henceforward to prosecute all vendors of foreign lottery tickets, which have heretofore been openly sold throughout the State, and to have an Act passed prohibiting all manner of gambling. EDS. PRESS.]

Bennett Valley Grange.

MESSRS. EDITORS:—Bennett Valley Grange is still above high-water mark. Bro. and Sister Carr were in attendance at our meeting on the 16th, feeling fairly well after their short tour over the State. Our Grange passed Bro. Davis' (the W. O.) resolution in reference to the Secretary's monthly correspondence, with the addition of the average temperature of each month. The average for January here has been 54°; for February to present date, 45°. The morning of the 15th was the coldest this season; then the mercury showed as low as 28°. In due time you will get our Secretary's correspondence in compliance with the resolution referred to. Yours fraternally,
G. N. W.
Santa Rosa, Feb. 18.

NOTEWORTHY.—Although the expenses of Worthy Master Carr for traveling about the State were proffered him, it is a noteworthy fact that the Grange was not allowed to make the least expenditure on his personal account. He has enthused our members wherever he has visited, and through the reports of his speeches and the sayings of others and the exhibition of so much of the true fraternal spirit and enthusiasm, we trust will be of permanent good in our State. It ought to make every Patron on the coast feel a greater pride and interest in the Order from the kind and appreciative manner in which Bro. Carr has been treated and the good will that he has carried from the Pacific Coast to his fellow-Patrons east of the lofty mountains and great deserts.

The Mullan Raid.

On Monday last Gov. Waterman mailed to the Secretary of the Treasury a letter regarding the now notorious claims of Capt. John Mullan and Secretary Fairchild's conduct in the case. After briefly reviewing the correspondence which passed between them last year, and remarking that he has never had a response to his letter of March 6, 1888, the Governor delivers himself in the following vigorous style:

It was apparent to me then, as it is evident now, that yourself and Captain John Mullan have conspired together against the promotion of the best interests of this State, and for the purpose of defeating, if possible, my authority in all these matters, to the end that Mullan might obtain possession of any drafts representing moneys appropriated by Congress for the benefit of this State, made payable to me as Governor of the State, and attempt in the garb of a pretended agent to levy a tribute of 20 per cent out of the same as his compensation for pretended "services rendered."

Acting upon this determination, you did, some time after October 18, 1888, and against my written instructions, deliver to Mullan as "agent and attorney" to convey to Sacramento two drafts payable to me representing \$11,723.64. This was entirely unnecessary, as the mails and express were at your command, but the extraordinary part of this questionable transaction was the fact that you permitted this money to be divided into two portions, one-fifth representing the amount claimed by Mullan, and four-fifths, as you assume, representing the amount due the State. Your manipulation of these drafts in favor of Mullan, although intended to give Mullan the benefit of "collecting" this money for the State and put him on good fighting ground against me, avail him nothing at the present time, nor will it in the future. On January 18th Mullan, on my demand, and as a private citizen, or messenger, surrendered the drafts into my custody, and the State will receive the whole amount.

To sustain this peculiar and unprecedented proceeding, and as an answer to my letter dated March 6, 1888, above referred to, I am now informed through Washington press dispatches of February 9, 1889, that "Secretary Fairchild referred the matter to Second Controller Butler, who furnished an elaborate review of the case, in which he decides in Captain Mullan's favor." This decision is printed with prominent headlines, such as "Mullan Recognized," "Waterman's Action," etc., and is put forth prominently at this time to discredit my action in removing Mullan and to throw dust in the eyes of our legislators who are not informed as to the true facts of the case.

It is unfortunate for Second Controller Butler that, in his zeal to aid Captain John Mullan in breaking into the money chest of this State, he has entered the arena against me, without being fully equipped as to the facts or informed as to the law, his information being fragmentary and elliptical in its character. Laying aside the proposition that he, a sub-officer of the Treasury Department, undertakes to decide judicially as to the validity of an appointment and a concurrent resolution adopted by our State Legislature, as against the plain provision of our Constitution, and pretend to advise me as to my duties in the premises, he assumes for his groundwork of attack a false assumption of facts, that in truth do not exist.

The Governor then takes up the false premises on which Mr. Butler bases his "elaborate review," and tersely disposes of them one after another, affirming that Gov. Perkins merely authorized Mullan to represent the State in recovering money expended in suppressing Indian hostilities, and that his appointment was not ratified by the Legislature in the following March; that Gov. Stoneman's appointment of Mullan did not embrace the same matters included in Gov. Perkins' appointment; that no record of such appointment appears in the Governor's office; and that all the appointments issued to Mullan were without authority of law, and any attempt to ratify or confirm them would itself be void.

Gov. Waterman closes with this caustic comment on the work of the Second Controller:

He has served your purpose well, and as a pawn in the hands of Captain John Mullan, Mr. Butler has proved a success. In view of the facts as above stated, it is not necessary to further review this "elaborate" decision, which, in Mr. Butler's case, was a clear waste of time, midnight oil and brainwork, at the expense of the Government.

The promoters of grab-games and raids on the State Treasury do not find an easy job when they try to "down" our present chief executive.

THE POOLROOM BILL.—There was a hearing before the Assembly Committee on Public Morals last Monday on the bill for the suppression of poolrooms. General Clunie appeared as counsel for the poolroom men and introduced several witnesses to prove that the breeding of blood horses depended on racing, and racing on betting; that these stimulants being removed, an important industry must decline. Mr. Rankin, for the petitioners, argued that, if such were the fact, the financial interests of a very small number of rich men should not be permitted to outweigh the moral interests of the community at large; that gambling is a vice which in poolrooms is practiced in a most seductive form, dangerous to the public morals, and particularly to the young. The committee closed the hearing, and will submit their report to the Assembly.

BRO. F. M. NIGHSWANDER sends us a report of Sisuald (Or.) Grange meeting, which will appear next week.

SAN JOSE GRANGE is coming forward with ten or more new applicants, and will have the new rituals also, we guess.

Tulare Grange Resolutions.

To the honorable representatives and Senate of the State of California in Legislature assembled:

WHEREAS, The subject of irrigation is the most important interest of Southern California and the whole State; and

Whereas, Water, the great element of life and wealth, is now squandered and misappropriated to a very large extent; and

Whereas, A State system of irrigation would conserve the interests of all and establish justice; therefore be it

Resolved, Tulare Grange, No. 198, respectfully requests Senator Roth and Assemblyman Berry to use their best endeavors to secure the enactment of a State system of irrigation.

W. F. STEWART,
J. W. MACKIE.

Worthy Master and members of Tulare Grange, No. 198, Order of P. of H:

Your committee appointed to draft a suitable resolution indorsing the passage by the Legislature of a law prohibiting the sale of intoxicating liquors in this State to minors or persons addicted to inebriation, beg to report the following resolutions:

Resolved, That Tulare Grange, No. 198, P. of H., herein indorse the passage of a law by the Legislature of this State, prohibiting the sale of intoxicating liquors to minors or persons addicted to inebriation, and we earnestly urge upon our representatives in the Senate or Assembly to give their earnest support to any such law as may be before the Legislature, and should there be no such bill now before the Legislature, we would request our representatives in the Legislature to have such a bill framed, introduced and passed.

Resolved, That a copy of these resolutions be sent to the Hon. G. S. Berry and John Roth, with seal of Grange attached.

ELIZABETH M. MAPLES,
JOHN TUGHY,
STELLA C. MERRITT, Chairman.

Grange Elections.

GILROY.—C. F. Eckhart, M.; M. Thomas, Jr., O.; Mrs. L. C. Trombly, L.; M. T. Holsclaw, S.; W. W. Beauchamp, Ass't S.; O. E. Sanders, Chap.; Geo. Easton, Treas.; C. R. Wilson, Sec.; I. L. Sanders, G. K.; Mrs. A. P. Sanders, Pomona; Nettie M. Witham, Flora; Mrs. L. F. Augney, Ceres; Annis M. Sanders, Lady As't S.

HOLLISTER.—G. S. Nash, M.; J. Ross, O.; Geo. Elliot, L.; A. H. Thyssen, S.; G. Brown, A. S.; V. B. Nash, Chap.; T. Flint, Treas.; A. Danlap, Sec.; C. Straube, G. K.; Mrs. G. T. Elliot, Pomona; Mrs. L. D. Nash, Flora; Mrs. G. Brown, Ceres; Annie M. Brown, L. A. S.

NOTE.—The Secretaries of Granges are requested to forward reports of all election and other matters of interest relating to their Granges and the Order.

A Saloon Ordinance.

The County Supervisors of Marin county have been studying the liquor business. They have just adopted an ordinance for the regulation and control of saloons that deserves notice. The fee charged, \$64 per year, is not high, but it must all be paid at one time, and that too before the place is opened.

Saloon licenses are not transferable, and the person, firm or corporation to which one is issued must first present to the County Supervisors a petition signed by ten free-holders in the township recommending the applicant and asking that license issue.

If the Supervisors decide that the license may issue, the recipient of the same shall enter into a good and sufficient bond in the sum of \$1000 to conduct the business in the manner prescribed in said ordinance.

It is ordered that all saloons shall be closed at 11 P. M., and not be opened again before 5 A. M. The exception to this rule is that the saloon may be opened from 11 P. M. to 4 A. M. on the order of the Supervisor residing in the same district, on the payment of \$10 per night for this special privilege.

All kinds of gambling games are prohibited in or about saloons. The regulations in regard to the management of such places are very strict.

Severe penalties, fines and forfeiture of bonds are prescribed for the violation of any of these provisions of this ordinance, and it is provided that a single conviction shall permanently disqualify one from receiving another license.

It is made the duty of the Tax Collector to collect all license money and specially to look after violations of the ordinance, the District Attorney being required to conduct all prosecutions under the same.

The ordinance has been carefully drawn, the language being explicit, and it seems like an honest and a genuine attempt to control the liquor business of that county. People who believe that the liquor business should be controlled by the country, rather than to control it, will be interested in noting the effect of this ordinance.—*Santa Rosa Republican*.

IMPORTANT.—A committee of San Jose Grange is preparing a very important communication concerning legislative action, to be presented for the consideration of subordinate Granges soon. It will probably be received in time for action by every Grange next week. Do not fail to attend and discuss the same without delay.

The Citrus Fairs.

It was not our happy fortune to attend either of the citrus fairs held last week—the one at San Jose being managed largely by our Grangers—but from the glowing accounts of eye-witnesses (which it is rather tantalizing to peruse), we cull and condense reports of both as follows:

San Jose.

In preparation for the Mid-winter Fair, which opened at San Jose on Monday evening, Feb. 11th, the interior of Horticultural hall was tastefully and elaborately decorated. The roof was one great bower of greenery, adorned with innumerable Japanese lanterns. The galleries were draped with orange and blue bunting, and a profusion of green leaves and red berries hung from all the gas fixtures. The handsome effect of the whole did great credit to both the taste and the industry of Mrs. M. E. Newhall, A. B. Hunter and the score of ladies and gentlemen who were with them on the Decorating Committee. The general management was in the hands of Cyrus Jones, assisted by the Decorating Committee above named, and the others following: Fruit Committee, G. W. Tarleton and M. S. Bowdish; Vegetable Committee, W. L. Manly and L. F. Chipman; Entertainment Committee, Mrs. Newhall and A. B. Hunter.

The heaps of golden oranges that covered the long tables, and were massed together in every shape, from loose piles to pyramids, castles and chapels, dominated the other exhibits and gave the prevailing tone to the exhibition. It was essentially a citrus fair, of which the Santa Clara people were very proud.

Next to the oranges in quantity were the apples, the exhibits of which were varied and excellent.

Under the gallery on one side of the hall was a castle built of oranges, by C. Yocco of Los Gatos. It stood on a bed of green moss, through which ran a roadway of oranges. Young citrus trees in bearing and graceful ferns decked the sward and lent a charm to the whole design. On the opposite side of the hall was another fine display of oranges from the groves of F. J. and E. C. Smith of Evergreen, arranged to represent the chapel front of Stanford University, and standing like the castle on green moss varied with pretty plants.

The refreshment booth in charge of Mrs. S. H. Leach, assisted by Miss Carrie Dougherty and Miss Carrie Campbell, was draped with green and white netting and adorned with ivy and sprays of pepper foliage. Bunches of bright red berries and various flowers added their beauty and perfume, making this stand one of the prettiest in the building.

The first table to the left of the hall was covered with dried fruits, sent in by many exhibitors, the chief of whom were C. W. Bennett, O. F. Ally and the Geo. Fleming Co. The display of dried, evaporated and preserved fruits of all kinds could hardly be equaled in any district of the same size in the world. In this general profusion of preserved fruits there was one glass jar containing six pears exhibited by the San Jose Packing Co., whose beauty attracted special attention and was universally admired. H. H. Headon of Santa Clara had some grapes preserved in such a way that the form, color, freshness and almost the bloom of autumn was on them yet.

Among the flowers from Dr. Mintie's Cypress Lawn Ranch, where they have been blooming in the open air, were coral plant, geraniums, China lilies, laurestinus, cassia, marigold, loquat, calla lilies, almonds, Scotch broom, cloth of gold, La France and giant of battle roses, fragrant daphne blossoms, cape jessamine and jonquils.

The palms, ferns, smilax, lilies, fuchsias and other plants shown by R. D. Fox were also very conspicuous; and Mrs. J. Aram's camellias, jonquils, Japanese magnolias, daphne, gillyflowers, snapdragon, geraniums, acacia and other flowers decorated many of the tables and added much to the attractiveness of the display.

The exhibit from Goodrich's olive farm illustrated the whole range of the olive industry, and afforded opportunity for noting every period in the growth of the tree and every step in the process of manufacture. Fine specimens of the oil made at El Quito were included in the display.

The San Jose table was covered with a miscellaneous collection of citrus and dried fruits and apples, sent in small quantities by a large number of contributors.

The Willows table, chiefly occupied by Wm. Beauchamp, showed some remarkably well preserved pears and persimmons, a large quantity of evaporated fruit and two superb cactus plants. The Almaden Mining Co. had several fine specimens of quicksilver ore.

The Saratoga table, to which S. W. Weed, C. T. Wilcox, F. A. Marsol and others contributed, was chiefly noticeable for its output of oranges.

The California Nursery had a brilliant display of palms, ferns, reeds, rushes, grasses and other evergreens on a table to itself. Near it was a collection of manzanita, wild currant and wild raspberry bushes, made by W. S. Bowdish.

The largest exhibition in the hall was that of the San Jose Fruit Packing Co.

Besides all the fruits, vegetables and flowers,

there were beautiful specimens of decorative art, cabinet work, scroll sawing, fancy work in silk and threads, curios and minerals.

Music and addresses made the evenings livelier, and a great number of ladies and gentlemen from the East registered their names on the book provided for that purpose.

San Bernardino.

The first citrus fair ever held in the city of San Bernardino was formally opened Wednesday evening, Feb. 13th. The hall in the Van Dorin block was handsomely decorated with festoons of greenery and orange-colored cloth, magnolia branches, fan palms, pampas plumes, olive branches, mountain evergreens and growing citrus trees in bewildering abundance. The pleasing effect was heightened by the paintings and the great banks of oranges, one in either gallery, partially visible from the main floor through the dense foliage. The contrast of colors—green leaves, white plumes, many-hued flowers and the deep orange of the Washington Navels—was very striking, and under the brilliance of the four electric lights, each of 5000-candle power, the scene was one long to be remembered.

The east gallery has a bank five feet wide running its entire length, covered with oranges from Highlands, Redlands, Crafon, Lugonia and Old San Bernardino, and bearing this placard: "Our Bank, Redlands, Highlands, Crafon, Lugonia and Old San Bernardino. Checks presented to this bank are never dishonored."

The west gallery has a bank 5 feet wide and 64 feet long, completely covered with 10,000 large Navel oranges from the orchard of L. M. Holt, editor of the *Times-Index*.

Directly opposite the right entrance is the Highland exhibit, exquisitely arranged by Mr. T. S. Ingham. In the center is a large pyramid of oranges of several varieties surrounded by plates of choice fruits from many contributors. From the Harrison ranch, two boxes of ripe strawberries excite great admiration. Above the exhibit is a cluster of dates from the ranch of Charles Hidden and a bunch of bananas from the ranch of W. A. Corwin—quite a curiosity to visitors who have never seen dates or bananas except in fruit-stands. There is also in this exhibit a sample of Tangerine oranges, from the ranch of Governor Waterman.

Mentone has a pyramid of handsome oranges from the ranch of Drew & Guthrie, surrounded by plates of lemons and other fruits. To the right of this table is a collection of choice plants and shrubbery from the nursery of Messrs. Soule & Wagoner. S. M. Stoner also has a fine display of plants.

The table in the center of the hall is devoted exclusively to the Riverside display, and a royal one it is. Twogood & Co. have the first space, arranged under the direct supervision of J. E. Cutter. The first piece on the table, a large Maltese cross, composed of Washington Navel oranges, is one of the prettiest in the fair. Another represents the San Bernardino mountain range, showing the peaks of old Gray-back (all composed of oranges), and is very natural. The Twogood Packing Co. has several boxes of choice oranges of all kinds, under the charge of Mr. W. C. Duell, who has also built a large pyramid of paper-rind St. Michaels seedlings, Navels, etc. Messrs. Waite and Sims make a fine display of oranges of different varieties. A. D. Haight has a pagoda of unique design, roofed with oranges and festooned with ivy and Tangerines. B. B. Barney has four boxes of Washington Navels, picked from the first budded Navel tree in California, and L. C. Tibbets has a fine display of Navel oranges from one of the original trees sent out here by the agricultural department at Washington. Handsome designs in oranges are also shown by E. E. Rosenthal and J. G. North, and many other Riverside orchardists have contributed more or less to this superb exhibit.

Old San Bernardino's output, arranged by Dr. Pierson, embraces oranges, lemons and preserved fruits in great variety, almonds, walnuts, etc., from the ranches of J. Birch, Judge Hargrave, J. W. Doren and others.

W. H. Sprinkle's sample cabbages and cauliflower average 32 pounds apiece.

Colton Terrace shows a variety of fine oranges from the groves of Dr. Fox and Curtis & Garner.

Chino comes in with a display of her products, consisting of vegetables of all kinds. Henry Parker of Highlands has on exhibition a mammoth watermelon. Yucaipa furnishes a fine sample of barley from the ranch of G. A. Atwood.

Jurupa, Mt. Vernon and Rialto, Redlands and Crafon, Cucamonga and Ontario are all worthy contributors to this great display of orchard and garden products, but space fails us to enumerate the exhibits.

Besides the dominant horticultural features, the Colton Marble Works have fine samples from their quarry, and specimens of different kinds of onyx. South Riverside shows coal, pottery, clay, mineral paint, tin and other ores; J. W. Waters, Jr., and Scott Karne have lent handsome cabinets of mineral specimens, and there are also inorganic samples from the Calico, Dry Lake, Needles, Colorado river, Oro Grande, Morongo and other districts.

The exercises of the opening night embraced addresses by Col. W. R. Tolles, president of the San Bernardino Board of Trade, H. M. Willis, W. A. Harris and L. M. Holt.

The attendance has been very large. The fair continues through the present week and has so far proved a marked and gratifying success.

To the English Sparrow.

Saucy intruder from over the sea,
Impudent vandal, brimful of glee,
Driving the linnet, the goldfinch and wren
Far from their haunts near the dwellings of men;
Tasting the cherry, the grape, and the fig;
Sampling the only ripe peach on the twig;
Rifling the caged bird's dish of its seed;
"Mine for the taking," it seems is thy creed;
Fearless and brave little exile art thou,
Chirping discordantly on the elm bough.

Stealing the swallow's feather-lined nest,
Vi et armis a self-welcomed guest;
Surely thou shouldst be a native of France,
Boulangier of birds, regarded askance
E'en by grimalkin, who yearns for you so,
Plump little rascal who knoweth each foe.
Safe from all snares by thine enemies set;
Tiny, shrewd Ishmaelite, what amulet
Immunity brings thee when danger is near?
Who gives thee warning, bold privateer?

Harsh-voiced, unmusical, pert bird of gray,
Why to my window at morn wing thy way,
Rousing from slumber the mind that would fain
Into that soul-soothing trance melt again?
O, leave me! for—hark! the sweet Sabbath bells
All the gloom that encumbers my spirit dispels,
And around me are visions that memory brings
To comfort or sadden the heart that still clings
To the dreams of the Past—to the hopes that have fled;
To dust that is dust, and the dead who are dead!

Who was the miscreant lured thee away
From thy insular home? Tell me, I pray,
That his name may become the ban of the land
Afflicted with thee and thy peace-robbing band,
Art thou the sparrow that Bible lore says
Falls not till the Giver of All ends thy days?
Unworthy object of His divine care—
Yet stay; were I weighed in the balance, what
share
Of His mercy could I claim, small sinner, 'gainst you?
Of a verity, thou art the best of the two.

—Ralph Turner in *Sac. Bee.*

Hope's Valentine.

A Prairie Story.

[Written for the RURAL PRESS by MAUDE MEREDITH.]

The night following the thirteenth of February had been cold and stormy, and when the sun climbed slowly the eastern hills its slant rays fell on a sea of diamonds, fair smooth whiteness as far as the eye could see. The old zigzag fence had disappeared, and in its place lay a downy glittering roll. The bare rocks were invisible and the ragged brown stumps that sat all summer like droway tramps dotting the hillsides were nowhere to be seen. The tall hemlocks and the baby spruces alike bent beneath their burdened arms, and the rabbits floundered slowly through the snow-spread aisles of the woods.

Here and there, nestled well into the snow, crouched a farmhouse, from whose kitchen chimney curled and billowed a great white bank of smoke. Across from a distant hill came the lowing of cattle. Some one whose young stock wintered in the open shed of a barn distant from the house was slow in foddering this morning.

Farmer Hollowell came into the kitchen, stamping the snow from his boots and slipping off his blue-striped mittens.

"I rather guess you'll be late to school this morning, Hope," he said, spreading his hands to catch the warmth from the kitchen stove.

"No one out breaking roads yet?" the young lady addressed asked.

"Not a soul stirring as I can see. I'll get out the sled an' plow, an' if you can stan' up an' ride, I'll take you up as far as Uncle Jake's hill. 'Tain't no ways possible for one yoke of oxen to break up through that, but probably we'll find the rest a diggin' there, an' we can git you over somehow."

"Oh, I can ride on the sled. I have, you know, and even if I tumbled off it wouldn't hurt me any in this new snow."

"Put up a good hearty lunch for her, Mar," he called to his wife, who was in the pantry. "Some doughnuts an' mince pie an' slices of boiled ham."

After breakfast the team was started and Hope was on her way to her post as teacher in District No. 4.

At the great drift at the top of the hill they found the neighbors with teams and shovels, and amid much laughter and merriment Hope was helped over and given a seat on the travers sled of an accommodating neighbor. About ten o'clock the schoolhouse was reached, and Hope warmed her chilled feet and aching hands. Five scholars only struggled through the drifts, and with that small number gathered closely about the box-stove, Hope wore the day away. When the low sun threw faint, sickly tracery of pane and sash and bare arm of outgrowing tree against the teacher's desk, the scholars knew it was four o'clock, and books and slates were noisily thrust into the desks and arms

were folded. The record of the day's lessons was taken and the school dismissed.

"'Spose yer fayther'll come for ye?" Lizzie Wilkins asked wistfully. Lizzie was sure of a ride home whenever she heard the jingle of Mr. Hollowell's heavy bells.

"If he is not too busy," the teacher answered.

The teacher put her desk in order, closed the cracked old stove, put on her wraps and closed the door of the schoolhouse behind her.

"Don't believe he's goin' to come, teacher," Lizzie complained.

Down the hill, over the bridge and away across a level stretch they gazed, but found no sign of life. People stayed at home on such a day as this unless called out by some imperative demand. Slowly the teacher and one or two pupils made their way along the rough, uneven track.

"Home at last," Hope groaned as she shook the clinging snow from her skirts. "How long a mile and a half can sometimes seem!"

Opening the door, she entered the warm, cheery kitchen and crossed to her own room. The teakettle sang merrily over the fire and tossed and tilted its shining black lid.

"I believe," she said to herself, "that I can't help mamma about the dishes to-night, and I'll put on my new wrapper."

From the hooks in her small closet she took a princess gown, for this was before the days of tea gowns, and had it not been so, the dress would hardly have borne the stamp of the latest fashion. For fashion was slow of locomotion, up in these mountain towns, and Byville's latest was usually two years out of date in Boston.

When Hope entered the kitchen again, she looked very pretty indeed, in this gown dyed a soft solferino, and fashioned from an old ecrase-colored delaine by her own deft fingers. A narrow band of black velvet held a tiny gold heart at her throat, and some soft home-knit lace about the throat toned down the too vivid color.

She went over to the window and gazed across at the white hills.

"Just two years ago to-day," she said to herself, "that John came to say good-by. He said that he must be there in time for the March breaking up, and that he hoped at the end of the first year to be able to send for me. That would have been a year ago, and for the last six months I have not heard one word from him. Did he die out there on the lonely prairies, John, my John, or did some prettier girl come there, and in his loneliness and isolation he forgot his little Hope, as he called me, and married her? How can I ever go on in all this uncertainty? How can I wait in this suspense?"

The door opening into the entry creaked, and Hope glanced around as her mother entered the room.

"What is it, mother?" she cried, noticing the strange expression on her mother's face.

"The mail came to-day," Mrs. Hollowell said quietly.

Hope's eyes widened, and her lips quivered, as she tried to voice her question, but could not.

Mrs. Hollowell nodded. "I got a letter from Aunt Jane; they're all well, and you had a letter, I'm sure it's a nice one—I just left it in the parlor."

Mrs. Hollowell raised the lid of the stove and stirred the burning sticks vigorously. In the racket, Hope hurried into the parlor, wondering why her mother should have done such an unheard-of thing as to take a letter into the seldom-used parlor and leave it there—wondering, vaguely, too, how any of the neighbors happened to go to the nearest post-office, seven miles distant, on such a storm-dripped day. Above and beyond all these lesser thoughts was the trembling uncertainty, the almost overpowering hope, that this was the long-looked-for letter from her absent lover. With trembling hands—cold, for the blood had surged back to her palpitating heart—she lifted the latch and crossed the sill.

In the center of the room stood a man, broader and heavier, and bronzed by inland winds, but still John, her John, come back to her alive and well.

She was conscious only of a great gladness, of a sense of having laid down her burden, of peace and peace; and yet, by some odd trick of the mind, she said only:

"I came in to get my letter."

"Your valentine, Hope, that should have come to you a year ago."

A half-hour later, when Mrs. Hollowell came to call them to supper, she asked Hope if she had found her letter.

With a blush, Hope answered:

"Yes, but I have not read it yet."

"We'll all listen to it, then," Mr. Hollowell said, as they seated themselves about the table.

John Marshall spread his napkin smoothly above his knees, clasped his hands on the table edge, and bending a trifle forward, said with a twinkle in his eye:

"Indians."

"O John!" Hope cried, horrified. In all her anxiety she had never thought of that.

"You see I staked my claim close beyond the Missouri, and for the first year had no trouble with the red-skins. But one night—well, Hope, the very one following the day on which I mailed your last letter, I woke up suddenly one night to find my cabin crowded with Indians, and in a jiffy they had me tightly bound with deer-skin thongs, and pretty soon we were tramping westward, I'll give you a detailed

account of the gear by and by, but, to make a long story short, to-day, I'll say, I could not get away, so I made a virtue of necessity and kept my eyes open. I played big medicine-man and gained great renown by dealing out the medicines that I took the caution to have carried with us. In that way I made for myself a sort of rude control, and when an old buck showed me a handful of gold nuggets, I easily learned the locality, and you had better believe I traded my clothing and medicines for handfuls of gold. I also taught them how to dig and wash, and when I had filled a big leathern belt of my own making, I took my chances and ran away. The first stream I struck I dashed into and followed it down, thus throwing the Indians off the trail.

"I had plenty of water, but very little food, you may be sure, for days, but at last I struck a clearing. When I came out into civilization I found myself far out in Colorado with the clothing of a savage and the pouch of—well, of a gold-digger. I got to the nearest town, disposed of my gold and got a draft on a New York bank for ten thousand dollars. I've got a claim all proved up out there, Hope, and, if you prefer, will go there to live; but I think I once heard you say you would like to live on the Judge Jeffries place. If you like, we will buy that."

"Whew!" Mr. Hollowell whistled through his pursed-up lips. "That would just be too drefle nice."

Mrs. Hollowell said: "I never said so, but I did most awfully hate to have Hope settle down so far from home, and way out of the world so, in Dakota too."

"Guess you could buy the Jeffries farm if you take a notion," Mr. Hollowell remarked.

"I just thought I'd run back home and bring the check for Hope's valentine," Marshall said, a satisfied smile curling the corners of his mouth.

"Um," Hope said, dimpling, "I'll take the valentine that I found in the parlor and you can keep the check to pay for the Jeffries farm."

How Jim Meadows Shot the Bear.

Until some time after the discovery of gold in California the population in Carmel valley was principally native Indians, and grizzly bears were plentiful along the river and in the mountains.

Among the white settlers there of foreign blood were two Englishmen—James Meadows and John Robertson. Meadows was from the county of Norfolk, and a pioneer of 1843; while Robertson was from Yorkshire, and arrived here in 1847.

Meadows had a ranch of one league with stock on it. Robertson had a small farm across the river, at present owned by Louis Wolter, and in addition to other stock had a flock of sheep with a black ram among them.

Jim Meadows was a good shot with the rifle, which Robertson was not, and one day Jack came down in great haste to Meadows' and told him there was a grizzly down in the brush back of the house which he wanted him to go and shoot.

Both started off together, and on nearing the place Jack saw something black moving, and excitedly sung out—

"That's him; shoot him, shoot him!"

Jim up with the rifle and fired, and as the critter jumped in sight when shot, Jack cried out—

"Why, d—n it, Jim, you've shot my black ram!"—*Monterey Argus.*

EATING FROM THE FINGERS.—At an official dinner a few nights ago a distinguished belle from New York was observed to handle the wing of a chicken with her fingers, and afterward daintily nibbled a "drumstick" the same way without the use of knife or fork. Some of the Cabinet and Administration ladies marveled at this and thought it showed "lack of breeding." The one authority, Mrs. Whitney, remarked that the action of the young lady was in perfectly good form. The list of things that can be eaten from the fingers is on the increase. It includes all bread, toast, tarts and small cakes, celery and asparagus, when served whole, as it should be, either hot or cold; lettuce, which must be crumpled in the fingers and dipped in salt or sauce; olives, to which a fork should never be put any more than a knife should be used on raw oysters; strawberries, when served with the stems on, as they should be, are touched to pulverized sugar; cheese in all forms except Brie or Requefort or Cumbefort, and fruit of all kinds except preserves and melons. The latter should be eaten with a spoon or fork. In the use of the fingers greater indulgence is being shown, and you cannot, if you are well bred, make any very bad mistake in this direction, especially when the finger-bowl stands by you and the napkin is handy.—*Washington Post.*

A NERVY YOUNG HUNTRESS.—According to the San Jose *Mercury*, Alice Sherman, the 16-year-old daughter of Sam Sherman of Calaveras valley, is a young lady of nerve. The other day she took a shotgun and went out quail hunting. The first game she met was very different from what she sought; it was a wildcat, but instead of running she raised her gun and fired. Her aim was steady and true. The wildcat fell dead and Miss Alice picked it up and carried it home, looking no further for quail. The cat measured 32 inches in length,

Angels' Rights.

[Written for the RURAL PRESS by ASENATH CARVER COOLIDGE.]

Dr. Slaver yawned a great lazy yawn as he was putting up a prescription for Mr. Woolbridge's baby. Then he opened his facial cavity once again and spake as follows:

"Nothing makes me so indignant as to see the brutal and idiotic manner in which men treat their wives. Take my word for it, Mr. Woolbridge, a man has only to be kind and polite to his wife, show her that he sympathizes with her cares and trials, and there's nothing under the heavens she will not do for him. She will be his devoted slave."

Mr. Woolbridge took both prescriptions and started home. He was so absorbed with the prescription for wives and with counting up the things (under his own heaven) that he would like to have his wife do for him, that he forgot to put the prescription for the babe in his vest pocket, and so lost it, as a man generally does when he attempts to carry such a trifle in his hand. Then to have a devoted slave in the form of a wife! That was of itself enough to sink a dozen baby prescriptions in unmitigated flea haunted dust. A few flattering words, a few loving kisses, a few sympathetic squeezes, and lo! the household fires would be builded and the garden weeded, and nevermore would he be under the disagreeable, yea, absolutely painful, necessity of changing his clothes before going to the bank.

When he arrived home he found his wife with her hands full of work and her feet, too. She was rocking the cradle and shelling peas. The other things, namely, the potatoes, turnips, onions and steak, which he had sent up early in the forenoon, were lying on the table in a pristine condition, and the fire was not yet kindled. It struck him that the time was auspicious for trying on the doctor's prescription. Accordingly he veered around to the rear of her, pressed a sympathizing hand on each of her shoulders, craned his neck over the top of her head, and kissed her on the little protuberance next above the bridge of the nose.

"Dear Nerry," he said, "how's the babe? I'm afraid it's going to wear you out."

"Oh, the child's not so bad," replied Minerva, glancing at the vegetables on the table. "It's better this afternoon, but cross and wants sleep. Did you get the doctor's prescription?"

"Bless you, Nerry, if I haven't lost it," said he, shaking his glove; "but I know about what it was. A little catnip tea sweetened will do just as well. To tell the truth, dearest, I was thinking so much about you that I forgot all about the babe."

"Indeed!" said Minerva.

"Yes, dear Nerry. I know you have a great many cares and trials, and I feel that I've been a brute and idiot in not showing you more sympathy and kindness and politeness. Can my angel wife forgive me and tell me of something I can do to make her life easier and brighter and sweeter?"

"She can most certainly, dear Wooley," replied Minerva, rising up with the dignity of a true wife in her heart and the pan of peas in her hand. "You may sit right down in this chair and jog the baby and finish the peas and peel the onions and potatoes. By the time they're done it will be after four o'clock, the boys will be home from school, and you can make them help you on with the rest of the dinner. I'll go and put the dining-room and parlor in order and beautify generally. If the baby wakes, you may give it a little catnip tea. The catnip is up-garret."

She went on tiptoe to the dining-room and shut the door softly after her. Later on she took a bath, which she called "heavenly," arranged her hair in "angel style," put on a dress which struck her as being the color of an "angel's house," added an odor of lavender-water as sweet, she thought, as that most divine odor which the soul of the venerable Bode is said to have emitted as it plumed itself for its heavenly journey.

Then she flew to the garden—yes, fairly flew, for she hadn't felt so light since the day she was married. She flew there just fast enough to escape her husband's frantic question, namely, "what to do with the potatoes that had boiled their water dry and were still as hard as bullets, and the peas that were flopping over and racketing around the stove like emerald hailstones?"

Once in the garden, she was determined to stay long enough to enjoy it as an angel should. She hadn't had time to hardly look at it this spring, much less gather a bouquet for the parlor or a nosegay for her nose; now she did both. After she had put the bouquet in the parlor and pinned the nosegay carefully under her nose, she flopped down in a velvet-cushioned chair and smilingly said to herself:

"I've struck a mine, dear old Wooley—struck it rich—richer than an old Californian could 'a struck it. It's a regular old Golconda, my mine is. I've struck it in the head, and such jewels of time! Bank hours—from nine till three! Oh, I'll have a nice little bit of panning out for you every day in the week, Sundays not excepted! Suppose you thought I'd ask for a nosegay. Thanks! Gathering flowers are quite in the angel line. Suppose you thought if you called me an angel I'd split the kindling-wood and weed the garden. Thanks! twin thanks. I'll show you that I know what the rights of angels are, my fine soft dear old Wooley, as sure as my name's Minerva Electa Fatima Dearing Woolbridge."

Goleta, Cal.

After Your Boy.

During the Christian Endeavor Convention at Chicago, one of the delegates, a young business man dressed in a natty rough-and-ready suit, every movement alert and eager, and telling of bottled energy within, came suddenly upon a red-faced citizen who evidently had been patronizing the hotel bar. Buttonholing the delegate a trifle unceremoniously, the latter said:

"What are you fellows trying to do down at the Battery? You are hot on temperance, I see by the papers. Do you think you could make a temperance man of me?"

"No," replied the delegate, looking him over from head to foot, with a keen glance slightly contemptuous; "we evidently couldn't do much with you, but we are after your boy."

At this unexpected retort the man dropped his jocular tone and said seriously: "Well, I guess you have got the right of it there. If somebody had been after me when I was a boy, I should be a better man to-day."

The young man gave in a nutshell the sum and substance of the Christian Endeavor movement.—*Exch.*

He Knew Him.

Capt. Billy C. is an efficient officer and a clever gentleman, but he is very thin.

A few days ago he was sitting in a rear room of a doctor's office. In the front room the office boy was reading a dime novel, when an urchin made his appearance with a basket of fruit and insisted upon the office boy making a purchase. To get rid of the young fruit vender, the other boy went to a case, opened the door, and exposed to view a skeleton. The fruit boy fled in terror, leaving his basket behind him.

Capt. Billy, hearing the commotion, went into the front office, and, upon learning what had occurred, walked to the door and called to the urchin, who stood across the street crying bitterly:

"Little boy! come over and get your basket; nobody shall hurt you."

"No, I won't," sobbed the little fellow, "you can't fool me. I know you, if you have got your clothes on."—*Redding Democrat.*

WHAT ONE BOY HAD IN HIS POCKET.—The *San Diego Sun* gives the following inventory of the contents of a San Diego youngster's pocket: One large spool, 5 small spools, 1 large iron pulley, 1 electric carbon, 1 piece of lead pipe, 7 clam-shells, 1 piece of lead pencil, 1 piece of blue lead, 1 bunch paper cat st-eps, 1 bunch hemp-rope, 1 bunch twine, 1 bunch tissue paper, 4 dominoes, 1 piece tape elastic, 1 top of tin spice-box, 4 marbles, 2 half-walnut shells, 2 shoe buttons, 2 coat buttons, 1 pants button, 1 wooden boat, 2 advertising tin dollars, 1 8-penny nail, 1 shingle nail, 1 empty cartridge, 1 folded "Want to see your picture," 1 Chinese coin, 2 small stones, 2 pieces slate pencil, 1 lead bullet, 1 iron buckle, 1 "nigger shooter," 2 castor beans. If any one knows of an 8-year-old boy who can beat this record, he is invited to trot him out.

DOWN TO HARD FACTS.—Notwithstanding the fact that Milwaukee brewers recommend their beer as "non-intoxicating, healthful, refreshing and invigorating, conducive to health, prosperity and happiness, and beneficial alike for old and young, male and female," the Northwestern Life Insurance Company, whose headquarters are in that city, will not issue a policy to any member or employee of these brewing companies. This position was not taken from a moral standpoint, but because the statistics show that these men die, as a rule, before their time.—*Ex.*

SALOON AND HOME.—On the night of Jan. 31st, a little before 11 o'clock, a Spokane Falls man was in a saloon playing cards. His wife left two children, aged respectively 3 years and 14 months, together in bed, with a lamp on the table beside it, while she went to the saloon after her husband. He told her to wait a few moments until he finished the game. The wife stepped to the door and saw her home on fire. Neighbors rushed to the rescue of the screaming children, but it was too late. The whole house was in flames and the children were burned to death.

"LET him sink; he is only a Jew," was the exclamation of a crowd of people in a Russian town recently, as they beheld the struggles of a poor wretch in the river. Just then a young man broke through the crowd which tried to hold him, and plunging into the river, brought the drowning man to the shore. As the crowd began to jeer at him for saving the life of a mere Jew, it was discovered that the man whose life was saved was a Gentile, and that his brave rescuer was a Jew. The jeering ceased and the crowd slunk away.—*Exch.*

"UNPARALLELED IN HISTORY."—A correspondent of the *San Jose Herald* writes: Something heretofore probably unknown in the history of Santa Clara county has taken place at Mountain View—a saloon-keeper has decamped, being unable to pay his bills. To the better class of citizens this is pleasing news, for when the saloon-keepers begin to go into bankruptcy they begin to think that perhaps the moral element will yet be in power.

YOUNG FOLKS' COLUMN.

A Little Poet.

Out in the garden, wee Elsie
Was gathering flowers for me;
"O mamma," she cried, "hurry, hurry,
Here's something I want you to see."

I went to the window. Before her
A velvet-wing butterfly flew,
And the Pansies themselves were not brighter
Than the beautiful creature in hue.

"O, isn't it pretty?" cried Elsie,
With eager and wondering eyes.
As she watched it soar lazily upward
Against the soft blue of the skies.

"I know what it is, don't you, mamma?"
O, the wisdom of these little things
When the soul of a poet is in them,
"It's a Pansy—a Pansy with wings."

—*Vick's Magazine for February.*

Great-Aunt Amanda.

[Written for the RURAL PRESS by MARTHA T. TYLER.]

Milly was inconsolable. That Lettice, who was a pretty girl, certainly, but such a doll, should have all the pleasures of life and she none at all, seemed a hardship indeed.

"I hope you are not envious, Milly," said her mother quietly.

"Oh no, mamma! It isn't that I care about her pretty clothes, or the money she has to spend, but Letty will only like Paris, you know, because it's a larger and gayer place than Pemberton"—here she laughed a little at the absurdity of the comparison—"while to me it would mean so much more. I am sure she doesn't appreciate her advantages."

"We all have what is best for us sooner or later," said her patient mother, with the suggestion of a sigh, as she turned her attention to the holes in Willy's stockings.

"Even down to a bottomless stocking-basket, mamma?" asked Milly with a smile, but her heart smote her as she scanned the pale, tired face, and she ran over in her usual impulsive way and kissed Mrs. Reed.

"Dear mamma, you are an angel; and this is the best place in the world after all, because you are here."

Lettice was the only daughter of Milly's wealthy uncle, Mr. Risdon. She was a blonde, with regular features and a delicate complexion. She sang very sweetly, and sketched very nicely, and laughed a great deal, sometimes not quite understanding why. She was always amiable, because she really had no cause to be otherwise; she had no wish ungratified, and though she did not believe, perhaps, that the good things of life grew on bushes, it was all the same to her as if they did originate in that manner.

How different was poor Milly! She knew she had a temper, and she was by no means blonde. Her hair was black and unmanageable, and her nose was a positive disgrace—an irremediable pug. Her skin was too dark and her mouth too large, she reasoned; but even so severe a critic could not deny that her eyes were fine—they were deep blue in color, and the lashes were long and black.

When Milly bought a new dress, she had to count the cost of every yard, and she never went to parties with the other girls because it was not customary to wear calico or serge at parties, and she had nothing prettier.

Milly's mother was Mr. Risdon's younger sister. She hadn't married to please him, and if she was obliged to struggle with the holes in the children's stockings, it was no fault of his. So he speculated here and there, and grew richer year by year, and adored his daughter and indulged his wife, and loved nothing else in the world besides, except his bank account. It did not occur to him, for instance, that Milly was a young person of intelligence, or that there could be anything outside of Pemberton to interest a girl of no expectations. If he thought of it at all, it was only to remember that there were six other children in the family and it wouldn't do to turn the girl's head. So Lettice went to Europe and Milly stayed at home, resolutely hiding her discontent somewhere in the bottomless stocking-basket, as she expressed it.

One sultry day in August she determined that her mother should have a holiday.

"But there are the peaches to do," objected Mrs. Reed.

"I will attend to the peaches."

"And the children?" persisted her mother.

"And the children," said Milly, "the four little ones at least; Carrie and Agnes are large enough to look after themselves."

Thus adjured, Mrs. Reed put on her bonnet and went to spend the afternoon with a neighbor.

The Reeds lived in a dilapidated cottage, which was surrounded by a rambling, old-fashioned garden. Opposite the back door a giant oak stretched its broad green arms in the summer sunshine.

Milly enveloped herself in a red calico apron, and finding it uncomfortably warm in the kitchen, brought her preserving kettle—an iron affair with a huge hoop handle—outdoors and suspended it from a branch of the tree. She then built a smoldering fire under the kettle, and the fruit was soon simmering in the open air. But when all these arrangements were

completed and little clouds of steam were rising from the mouth of the pot, the children demanded amusement of some kind. Ally, a delicate girl of five, whimpered for mamma, and Bobby, the baby, called for a toy; so Milly made the four prattlers sit down on the ground and began to sing an old rhyme to an improvised tune, beating time in [the air meanwhile with a large wooden spoon:

"Bobby Shaftoe's gone to sea,
Silver buckles at his knee,
He'll come back to marry me—
Pretty Bobby Shaftoe."

To the great delight of the baby, who of course imagined that he was the Bobby in question. The entertainment, however, was brought to an abrupt conclusion by the appearance, from round the corner of the house, of a handsome little white-haired lady. She wore glasses which could not wholly conceal her bright eyes, and carried a small traveling-bag in her hand.

"Well!" she exclaimed to the astounded Milly, "I am your great aunt Amanda—at least I suppose so, though I wasn't aware that Tom had married among the Gipsies."

"What do you mean, ma'am?" asked Milly. The old lady pointed a slender finger at the swinging kettle around which in a semi-circle sat the four black-eyed children.

Milly laughed. "Oh, I see. It was so warm in the kitchen," she explained; "but are you really Aunt Amanda? Papa will be so glad you have come, though we weren't—"

"Expecting me, I dare say. Well, my dear, I am always surprising somebody," and she kissed the young girl warmly.

Mr. Reed's Aunt Amanda was a widow. She lived in New York and had not seen "Tom" since he was a boy. She had always been eccentric, and when she at length resolved that she ought to know her nephew's family, she did not think it at all necessary to announce her intended visit. Arriving in Pemberton this morning, she inquired for and was directed to the Reed domicile, and hearing voices in the rear, she had followed the sound and presented herself to the children in the manner already described.

When Mrs. Reed returned, a few hours later, she found her husband's relative duly established as a member of the household. And what a cheerful, helpful old lady the newcomer was! Before the end of the first week she was Milly's confidante, and Ally's comfort in chief, and Bobby's oracle; for the "tories" she told were extraordinary. But it was to Milly herself that Aunt Amanda's heart turned most lovingly.

"Tom," she said to her nephew one evening after supper, when they were alone together, "what a pity it is that Milly should spend her young life in this humdrum sort of a place; and the child is a beauty."

Mr. Reed looked up with a smile. "We have never thought of Milly as a beauty," he said.

His eldest daughter was a bright, sweet girl, he knew, and that contented him. He had been too much absorbed in business cares to observe further, and indeed he scarcely realized that she was almost a woman.

"It's the shabby, old-fashioned gowns," said Aunt Amanda meditatively. "She ought to be better dressed. I want you to lend her to me for a year or two, Tom. When I left New York it was not with the expectation of a standstill at Pemberton. The doctor had recommended a decided change, and Europe fills the prescription; besides, I am determined to see something of the world. I should like to look at it through Milly's young eyes. Well, what's your objection?"

"Her mother," hesitated Mr. Reed; "there are so many children, you see—"

"Nonsense!" answered Aunt Amanda. "Carrie and Agnes must be sent to school—they are both running wild in this country town—and there will, of course, be some one in to help with the little ones. Come, Tom, don't disappoint me by spoiling my plans. You are my own nephew, you know, and I love the girl," and thus it was settled.

"What a prophet you were, mamma," said Milly, gayly, when she was told of these delightful arrangements. "You said we all had what was best for us sooner or later; though I am afraid you were only trying to persuade yourself that Europe wasn't best for me."

Six months afterward she met her uncle and family in London.

"Who would have thought that that wild little Milly would ever be so handsome?" observed Mr. Risdon.

"She is rather pretty," said his wife languidly, "and I'm told that the singular old woman is devoted to her and will leave her everything she has. The house at Pemberton has been completely renovated, I hear, and all of Tom's debts have been paid."

"Humph!" ejaculated Mr. Risdon, and he probably concluded that his sister had not married so badly, after all; for Aunt Amanda's income was known to be large.

HE PINED FOR THE FOLKS.—The *Carson Appeal* says that a little over a week ago Mrs. George McLaughlin went to San Francisco on a short visit and took her three children. These children had been the constant playmates of "Old Abe," a bulldog about 12 years old. The day after Mrs. McLaughlin left, the dog began searching everywhere about the house, and not finding her or the children, set up a most dismal moaning, and absolutely refused to touch

anything in the way of food or drink. He got thinner and weaker every day until finally Mr. McLaughlin wrote his wife to come home or the dog would die. When she returned the dog was reduced to a skeleton, but as soon as she reached the house, he set up a cry of joy, and when the children offered him food he ate ravenously. He has now recovered his spirits and part of his lost weight.

Sayings of Little Folks.

Alvard, aged four years, had been told if he was a good boy Santa Claus would bring him pretty things; but if he was bad he would bring switches. In the morning he stood in open-eyed wonder over his full stockings and many gifts, and was heard to remark, as he examined each: "Goodness! but I didn't know I'd been such a good boy."

Lloyd, aged three, is just beginning to put on and button up his shoes. Having discovered that the buttons were all on the inside of his feet, he looked first at one, then at the other, and told his mamma his "feet were crooked."

Nina, aged two and a half, remarked, "the weather was propitious," and asked leave for a walk.

DOMESTIC ECONOMY.

Drying Peaches.

EDITORS PRESS:—Some one asks concerning the drying of peaches. We have dried them only for home use, but will tell all we know about it:

We dry the fruit on long tables or boards placed in the sun, and select large firm fruit, as we find we lose less by shrinkage than when it is very ripe. We cover the fruit while drying with cheese-cloth or mosquito-netting to keep the bees and yellow-jackets from bothering it. We do not turn it over, but when it is partly dry push the pieces closer together to make room on the table for more. We consider them thoroughly dried in about a week if the weather is fine. We peel them by hand, and think one person could peel from 150 to 200 pounds a day. When we take them from the tables we put them in baking-pans and place in an oven for about ten minutes to prevent them from becoming wormy during the winter, as we have found that heating them through well will make them keep better.

We have never used sulphur, but are told that it will not only give the fruit a finer appearance, but also prevent it from shrinking so much.

SUBSCRIBER.

Tres Pinos.

LIGHT CAKE.—Two cups of sugar, two cups of flour, two eggs, one cup of sweet milk, two tablespoonfuls of melted butter, two teaspoonfuls of baking powder, two teaspoonfuls of lemon extract.

STEAMED OATMEAL.—Half pint oatmeal, one teaspoonful of salt; put in two-quart basin and pour over it one quart of boiling water; put in a steamer and steam two hours. Do not remove the cover during that time.

SWEET MILK GEMS.—Beat one egg well, add a pint of new milk, a little salt and graham flour until it will drop off the spoon nicely. Have ready your gem pans, well greased and heated. Bake in a quick oven and send to table hot.

DROP CAKES.—One cup sugar, one cup sour cream, one teaspoonful of soda, one-half cup of currants, one and one-half cups of flour; flavor with nutmeg and cinnamon and drop from spoon into a buttered pan; bake in a quick oven.

POTATO PUDDING.—One dozen medium-sized potatoes boiled and mashed; mix with one pint of flour and one teaspoon of salt; roll into little balls; boil three pints of milk, drop the balls in, and stir on the stove till stiff; lift out and serve with butter and sugar.

CRACKERS.—Butter, one cup; salt, one teaspoon; flour, two quarts. Rub thoroughly together with the hand, and wet up with cold water; beat well, and beat in flour to make quite brittle and hard; then pinch off pieces, and roll out each cracker by itself and bake.

APPLE SAUCE.—Core and bake, filling the holes with sugar, seven or eight apples. When very soft, mash them through a sieve into a small pudding dish; grate in the rind of a fresh lemon, and spread over the top the white of one egg beaten with half a cup of sugar, and brown slightly. Eat cold.

FRIED RAW POTATOES.—Pare and slice thinly into cold water some medium sized potatoes, drain in a colander and put into a frying-pan in which are two tablespoons melted butter; cover closely ten minutes, removing only to stir them from the bottom to keep from burning; cook another ten minutes, stirring until lightly browned.

SALAD DRESSING.—One heaping teaspoon each of salt and mustard, two tablespoons of thick, sweet cream, one tablespoon of butter, three of sugar, one-third of a cup of vinegar, the well-beaten yolks of two eggs; add mustard to eggs, beat well; add sugar, salt, cream; stir all well together and place over the fire, and stir constantly until it thickens; add vinegar last, pouring the dressing over the salad and mixing it well.

The Week.

Although the long dry spell was broken toward the close of last week by welcome showers, which were heavy in some of the middle counties and left considerable snow upon the mountains, the wondrously fair weather soon resumed its sway and gives no promise of a speedy abidation. Yet, as may be gathered from our agricultural notes, a cheerful tone prevails among grain and grass growers; the crops are looking well and no great anxiety is manifest, though rain whenever it comes will be hailed with gladness.

The wide acreage seeded this year and the excess of the demand for nursery stock over the supply of favorite varieties continue to be common topics. In the State and National Legislatures there is still a deal of talking, without much else to chronicle; and taken for all in all, the week has seemed less eventful than usual.

Fruit and Freight.

It is a good time of the year to have something encouraging announced concerning the overland freight rates on fruit and fruit products. We have frequently alluded to the excessively large share of the gross receipts received for fruit at the East, which was handed over to the transportation companies. The annual report of the Fruit Union printed in the RURAL of January 19th makes very forcible statements of the facts, and among others the following: "The transportation companies receive the lion's share and pocket \$345,156 28, or nearly \$1.50 for every dollar which finds its way into the producer's purse."

This state of affairs will certainly not promote the extension of the fruit interest. The Fruit Union appointed a committee to confer with the railway managers on the subject, and if an early and favorable report can be had it would have an enlivening effect upon all branches of industry which are based upon the success of the fruit product.

The evil of high rates is just now bearing very heavily upon our canned-fruit interest, and the character of the coming year's operations will be shaped largely by the action of the transportation companies. The Call of Feb. 19th says:

A strenuous effort is being made by fruit-canners and produce-dealers to reduce rates on California commodities. Several of the leading shippers have waited on General Traffic Manager Stubbs of the Southern Pacific with a view of inducing him to take the matter up with Chairman Leeds of the Transcontinental Association. There has been a tremendous pack of peaches in Maryland this season, and the rate from Baltimore to Chicago is only 22 cents. The result is that the Chicago dealers are not purchasing California canned goods at all this year, for the three-pound can of Maryland peaches is selling at a considerably lower rate than the 2½-pound can of the California pack. This is owing to the rate of \$1.10 charged by the transcontinental lines. All the wholesale merchants and shippers are carrying big lines of fruits which they cannot dispose of. The worst of the matter is that the Maryland goods have obtained a monopoly of the market, and there is only a small demand for other California fruits.

Mention is made elsewhere of a meeting of fruit-growers to be held March 1st at the office of the State Board of Horticulture in this city. It should be well attended, and, no doubt, action can be had which may tend to clear up the situation. All those interested in production and trade will be welcomed at the meeting.

Discussion on Fruit Marketing.

As the next regular meeting of the State Horticultural Society would be February 22d, a national holiday, the president has decided to postpone the meeting until the following Friday, March 1st, at 1 o'clock P. M., at the office of the State Board of Horticulture, 220 Sutter street, San Francisco.

The subject for discussion will be "The Marketing of California Fresh and Dried Fruits." Invitations to attend and participate in the discussion have been extended to a number of gentlemen prominent in the fruit trade, and it is hoped that a large attendance, both of invited guests and regular members, will be had. The subject is of the greatest importance and probably mutual advantage will result from a conference among all concerned. The meetings of the society are always open to all interested in horticultural matters.

A DECISION ON MINERAL LANDS.—A decision just rendered by the U. S. Supreme Court will be encouraging to those who may be in fear of dislocation through claims of mineral locators. It seems that John Gale acquired certain lands from the California & Oregon railroad which were granted to that corporation by Act of Congress, and were subsequently transferred to the Central Pacific Company. The defendant established a mining claim on the ground, asserting that all mineral land is exempt from settlement and by Act of Congress is public domain. The Supreme Court held that land granted by Congress without any specific limitations as to its settlement does not come under the reserving Act pleaded by the defendant, and so the plaintiff's title is valid. The court, in making this ruling, states that were the defendant's plea valid, it would endanger the title of thousands of homesteads situated on mineral lands.

Barley and Corn.

EDITORS PRESS:—In nearly all the combinations of the grains for the feeding of cows and hogs I notice that cornmeal enters largely. Now corn will not mature in this section (immediately on the coast), but it is the home of barley, and I wish to know how nearly barley-meal will fill the place of cornmeal in quality and feeding value.—J. W. HALL, Miller, Mendocino Co.

We should like to hear from practical stock-feeders of their deductions from experience in the use of the two grains. Barley is of course largely used in this State as a substitute for corn in the feeding of animals—not exactly as a substitute for corn either, but our stock-growers use barley for the same purposes that farmers in the great corn regions of the country use corn. We would like to print half a dozen letters from our readers on the point advanced by Mr. Hall.

Theoretically, barley and corn may be compared by their analyses about as follows:

Complete Contents.	Barley.	Corn.
Water.....	14.3	14.4
Organic matter.....	83.1	83.5
Albuminoids.....	9.5	10.0
Carbo-hydrates.....	66.6	68.0
Crude fiber.....	7.0	5.5
Fat.....	2.5	7.0
Ash.....	2.6	2.1
Digestible Nutrients:		
Albuminoids.....	8.0	8.4
Carbo-hydrates.....	58.9	60.6
Fat.....	1.7	4.8
Nutritive Ratio.....	7.9	8.6

These figures show what the chemists say of the comparative composition of the two grains. Feeding results do not always correspond exactly with analyses, but still compare with them so closely that analyses are now generally considered of direct practical account. Perhaps the most notable point of difference between barley and corn is seen in the large percentage of fat, to which is mainly due the heating and fattening effects for which corn is famous.

Prof. E. W. Stewart, in his book "Feeding Animals," has the following paragraph in which the two grains mentioned by our correspondent are compared:

"Indian corn has only 2.1 per cent of ash, and this not rich in phosphate of lime, etc. It has less of mineral constituents required by the growing animal than barley or oats, the former having 2.6 per cent and the latter three per cent. We desire to direct attention to corn as an improper food to be given alone to young animals. Corn is quite too heating and fattening and too poor in muscle-forming and bone-building food to be given alone to young animals—in fact it is much better to discard it altogether in feeding animals under six months old."

The proper place of barley as a feeding grain cannot be learned from Eastern and European investigations because barley is so little used as cattle food. It is usually too valuable for malting to be used by the feeder. In this State, however, barley is a staple food grain, and the State is admirably adapted to its production. Any information which can be given to many who, like Mr. Hall, live outside of the "corn belt," will be welcome.

Of Interest to Farmers.

Mr. R. G. Sneath, who has large farm-dairying interests in San Mateo county, and evidently entertains a sincere desire for the progress of the honest industries of our State and country, at our request, has written an article relating to the San Francisco water-front, showing some sensible improvements which should be made for the more economical receipt of produce from the interior, and shipment of goods from San Francisco to consumers and tradesmen in the interior. The fact that all the enormous extra expenses now incurred in drayage and warehouse transportation have sooner or later to be paid (in large proportion at least) out of the pockets of farmers, should make them interested in this matter. We would especially call the attention of the Grange Legislative Committee now at Sacramento to his article in this issue.

ORANGE SHIPMENTS.—The Union and Central Pacifics seem to have the advantage of the Santa Fe on the orange crop this season. The bulk of the shipments is all going East via Sacramento, Ogden and Omaha. A train of 11 cars left Riverside on Wednesday evening last, and another of 10 cars on Saturday evening. Very rapid time is being made by these specials, and their cargoes are expected to get into Chicago in first-class condition.

QUERIES AND REPLIES.

Horses "Rattleweeded."

EDITORS PRESS:—I notice an article in the last number of the PRESS on the question "Is Rattleweed Poisonous?"

I have had some experience in the use of hay that was made from volunteer wheat and barley, well filled with what is known as "rattleweed." I bought ten tons of a neighbor who himself had lost six head of horses from the same hay.

I came here in October last with a couple of fine-blooded mares, both with foal. They were in fine order, gentle, and would work anywhere I put them. About a month after I settled here, I noticed that the younger mare began to act badly, throwing her head up while being bridled and refusing to be led out of the barn, rearing up on hind legs and balking. In a short time the older mare went the same way, and next an old horse I had—all acting in the same strange way.

I concluded they were "rattleweeded," and I could do nothing with them in the shape of work or driving. I took them off of the hay and commenced feeding barley and straw, and in a week I could do anything with them—gentle as before, though much reduced in flesh. They both lost their foals. I have had no further trouble with them since.—S. F. FREDRICK, Kirkwood, Cal., Feb. 12, 1889.

Don't Believe They are "Locoed."

EDITORS PRESS:—Regarding the loco-weed business, I have been solidly of opinion for many years that the whole thing is a humbug. It is always difficult to prove a negative. But I founded my belief on several facts: (1st.) In some places horse-insanity was laid to the charge of one weed, in another place to an entirely different plant. (2d.) There was no direct proof that the alleged effects were consequent on eating it at all. (3d.) In any given pasture only a few horses were affected. (4th.) Very seldom did any horse go crazy, except those worked almost to death. (5th.) I have known many locoed horses to be just as bad after months of strict confinement to hay and ground barley as when on pasture. (6th.) I have known hundreds of horses to feed for months over ground infested by rattleweed—the supposed chief offender—and none go insane unless excessively worked. (7th.) It seems just as reasonable to impute the blindness produced by too hard work to rattleweed as to impute insanity. (8th.) It would be just as reasonable to suppose that all the insanity in the human race arises from eating some particular food—cucumber pickles for instance—as that horse-insanity arises from eating some weed. In 99 cases out of 100 it arises from abuse and overwork, with a constitutional tendency that way, which brings me to the next most important reason. (10th.) In every case I have ever known the locoed horse was a natural fool—narrow between the ears. Such horses are usually good pullers, but fit for only a big team. This is usually the characteristic of the same horse when locoed, but intensified. Whereas before he had but one small idea, now he has only half of one. A horse of little sense may yet be quite nervous, and a daily beating for a month or so with work beyond his strength and frequently insufficient or improper food, will sometimes push him over the narrow line between sanity and insanity, and then some innocent weed (that probably the horse never tasted at all) is lugged forward as the cause—anything to divert attention from the real cause. It is the usual custom (within the last few years a few exceptions,) in the valleys of the State, the main grain-fields, to work horses in harvest from sunrise till noon without water, no matter how hot the weather. This thirst alone would often drive the owners of these horses to insanity, if they had to endure it day after day, especially as some of them suffer from the same affliction—a deficiency in good sense—shall we say horse sense? The whole loco theory is an absurdity in my opinion, and as unreasonable as knocking out a horse's teeth to cure his sore eyes—a silly brutality.—W. S. PROSSER, Shingletown, Feb. 12, 1889.

Morning-Glory.

EDITORS PRESS:—Would any of your readers who has had experience, and has been successful in killing wild morning-glory, give an account of how it is done? I saw it stated some time ago in the RURAL that A. T. Hatch had completely eradicated a patch of the weed in his orchard by continuous plowing. Would Mr. Hatch kindly inform me if that statement is correct, and how often the plowing was done?—JOHN RITCHIE, Fresno.

EDITORS PRESS:—Plowing is not the word. Cut the morning-glory with a bar weed-outter like the "Hogue" under the surface, say about four inches, so often that it can never be seen at the top of the ground, and that will smother it.—A. T. HATCH, Susan.

Forage Plant for Moist Land.

EDITORS PRESS:—I have some land too wet for alfalfa to grow well on for more than two years without renewing. Is there not something better suited to this class of land for either hay or pasture? Land contains a very little alkali, but not enough to injure the growth of barley, and being of a springy formation.—M. S. D., University, Los Angeles Co.

VALLEJO is threatened with another water famine.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

NO DROUTH YET.—Haywards Journal, Feb. 16: The present stretch of balmy summer weather is a surprise to almost every farmer. Still we cannot seriously complain. The cold snap a few weeks back was of great benefit, and since then the mild weather has not been an injury, but the young grain is up fresh and green, and feed in the hills is by no means dying. Many fields of grain planted after the last rains are in excellent condition, and the 500 acres planted on the Meek ranch before the rain came, is the picture of health. We are not at all alarmed.

Butte.

BLACKBERRIES IN FEBRUARY.—Gridley Herald, 14: Saturday last Dr. Todd picked a pint of ripe blackberries from some bushes in Mrs. Miller's door-yard. We saw the mess Monday and ate several of the berries. They tasted the same as those picked during the regular season.

Contra Costa.

WANTS TO BE AN AGRICULTURAL DISTRICT. Martinez Gazette: We think the desire is general that Contra Costa should be set off as a district by itself and hold its own District Fair under the provisions of the law by which some counties, inferior to ours in population and wealth, are enjoying that privilege. We are at present united to S. F. and Oakland, but have always held our own county fair, and are very slightly interested in the District Fair as now constituted. Let us be made a district by ourselves, by which we will be entitled to our share of State aid.

Kern.

ONE JERSEY COW.—Tulare Register: G. W. Kirker, living on his claim seven miles southeast of Delano, has a Jersey cow which has been kept all along tethered out on the plain with no other feed than the wild grasses, and yet the record kept by Mrs. Kirker shows that during January she made from the milk of this one cow 51 pounds of butter, besides selling 15 gallons of milk which had not been skimmed. Since the 20th day of May, up to the 7th day of February, they sold as the product from this cow, \$78 50 worth of butter and milk. Most of the feed during this time was dry alfalfa, and the cow would have done better had she been fed more nourishing food. The magnitude of the January product will be appreciated when it is known that the calf is now a year old.

Los Angeles.

BLUE-GUM FUEL.—Orange Tribune: The great eucalyptus trees along the front of Dr. McCoy's beautiful place are one by one falling before the chopper's axe. The last one felled at 14 years of age was cut up into three and one-third cords of body wood, worth, when dry, \$7 or \$8 per cord. What's the matter with a eucalyptus grove as a regular crop?

RACING ORANGE TRAINS.—L. A. Herald, Feb. 12: The race between the orange special trains is over, the time made to the Missouri being about the best on record for freight traffic. The S. P. and U. P. train, which left here on Wednesday night, reached Ogden in 56 hours, and made the run from that place to Omaha in 40 hours, being exactly four days from this city to the Missouri river. The Santa Fe special, which left San Bernardino at 3:30 A. M. on Friday last, pulled into Kansas City at 6:30 this morning, the time for the run being four days and three hours. As regards the trip into Chicago, each road claims that it can make the trip from the Missouri river in the fastest time, so it may be considered a "stand-off." Two more specials, one over each competing route, will leave the city on Wednesday, and two more are announced for Saturday.

Modoc.

POISONED BY WILD PARSNIP.—Alturas Independent, Feb. 14: We understand that a considerable number of cattle have died on South Fork lately from eating wild parsnip. We heard that Jones say last Monday that Charley Williams lost several head and the corporation have lost probably 20 head, and other parties are losers from the cause, and that altogether probably a hundred head have died. Last fall Charley Williams employed some Indians to dig wild parsnip. They dug up 75 sacks, and Mr. Williams was careful to destroy it, but by some means one sack was overlooked and left in a patch of willows. The cattle found this one sack, and it was what did the mischief. Arthur Jackson says if when an animal is found suffering from this poison, a sharp knife is stuck into the abdomen on the left side, just in front of the hip-bone, it will give relief every time.

Napa.

CROPS PROMISING.—Napa Register, Feb. 15: Crops of all kinds look very well and nothing is suffering for rain. The outlook is promising. Pasturage was never better and stock is in better condition than usual at this season of the year.

NEW ORCHARDS.—Mr. Duff, who last fall purchased 50 acres of land four miles north of town, on the east bank of Napa river, is having 20 acres of the tract planted to fruit trees of standard varieties. He has otherwise improved his land by tilling the lowest places. W. A. Fisher has enlarged his orchard by 15 acres this spring, and now has one of the

largest and thriftiest orchards in the valley. Capt. McFee, who bought the Gold place on the Big Ranch road last fall, has set out 20 acres in one tract on land that is exceedingly well adapted to fruit-growing. These are but a few of many similar improvements made this season.

AROUND NAPA JUNCTION.—Vallejo Chronicle, Feb. 15: From Geo. W. Watson, we gain the information that 1150 acres more have been plowed up around the junction than for several years past. Part of this is the Glassford ranch of 600 acres, which is now being farmed by the Corcoran Bros. Mrs. R. D. Watson has put in 800 acres—400 acres more than last year—and Frank Sanderson has plowed up 300 acres, 150 of which is new. Mat Scallely has plowed up 150 acres; James Freund, 150; P. Walsh, 100; G. W. Watson, 150; Mat Lynch, who has charge of the Fagan, Tormey, and Sheehy estates, has put in 400, and W. Middleton, 150. The Hessian fly has been growing less yearly, until now it is almost extinct, and it is said that a small insect found to beat in the same places where the fly existed has been fatal to the fly, but it is harmless to grain. Dairying in this vicinity is in full blast. The grass never was in a more advanced state, and was as good on the first of January as it was March 1st of last year. The frost has done no damage. The fruit trees are shooting forth into buds. The place has been improved by a beautiful station-house and made lively by the completion of the Santa Rosa road, and in the enjoyment of good health and prospects for good crops, the people are happy.

San Diego.

BLASTING OUT HOLES FOR TREES.—San Diego Sun, Feb. 14: "Few people elsewhere in the world may ever have heard of blasting holes to plant shade or fruit trees," said a cultivator this morning. "Yet the practice is common here and shows good results. In most places there is found sufficient top soil for any purpose, but as land has become valuable, people have cast about for means to utilize lands where the coarse sand-rock comes too near the surface for successful tree-planting. A blast, well put in, creates a pocket of broken rock mixed with top soil, which furnishes a basin to hold moisture, as well as a deeper and cooler hold for the roots. It is yet too early to say what will be the ultimate results of such planting; but in a climate like ours, where a superfluity of rainfall is not likely to occur, it will no doubt be entirely successful."

SHEEP IN THE OTAY.—Press, Feb. 14: At this season of the year many of our sheep-owners located near the boundary line up the Otoy, and who feed their flocks on the Mexican side, are driving their sheep on to the American border, where they remain a few months for lambing and shearing. Some of these flocks are herded 170 miles down in the interior of the peninsula, where they find abundant feed on the hills and in the fertile valleys that there abound. Not less than 30,000 of these American sheep are yearly driven to our borders, and at the present time Hugh O'Neil, the sheep man of the Otoy, has 16,000 on this side of the line, and Neito Echenique has 10,000 here, with 10,000 yet on the way, besides other bands that are expected to arrive and remain here during the lambing and shearing season, thus saving the custom duty of 20 per cent on lambs and 10 per cent on wool. The shearing season begins about the middle of March and lasts until the middle of April, when about 200 tons of wool will be clipped. This year the feed is said to have been remarkably good, and the sheep are looking fine and the lambs are doing well, 18,000 of which may now be seen innocently besporting themselves among the wild oats up the valley.

San Joaquin.

GLANDERS.—Stockton Independent, Feb. 7: Veterinary Surgeon Orvis reported to the Board of Supervisors that he visited A. Roffo's place near Linden yesterday morning and found three cases of glanders and one suspicious case. Mrs. Talbot has had a black mare destroyed, and promised to have a gray pony on her place killed. These cases were included in a previous report. The Supervisors referred the report to the District Attorney, who promised to enforce the law and compel the owners of the stock to kill the diseased animals.

AN INDIAN'S HOMESTEAD.—A patent was received at the Land Office a few days ago for a homestead entered by Chenk Ha, an Indian, who had complied with the terms of the Act of 1862 governing homestead entries. The patent is different from any heretofore received at the Land Office at this place in one respect: It contains a provision that the property shall not be liable to alienation, either by the voluntary act of the homesteader, by reason of a judgment or decree of any court, nor to satisfy any judgment for a debt; neither shall it be liable for taxation for any purpose whatever. The proviso, which is inserted in accordance with the provision of an Act of Congress approved in 1883, is to continue in force for the period of 20 years. The land is near Fresno Flats, and is good agricultural land.

San Luis Obispo.

WATER BY TUNNELING.—Ranchita Cor. S. L. O. Tribune: Mrs. Van Eaton, who has been living here for the past two years, after having two wells sunk nearly 100 feet each in depth in the valley, with no water, now has plenty of water 300 feet above these wells in a gulch upon the mountain-side. The first show

of water was discovered by one of her neighbors. While going up the gulch he discovered wet earth in the bank, and told her he thought that if she would have a tunnel run in on the wet streak she would get water. She concluded to try, and obtaining help had the tunnel run in about 40 feet, and has now plenty of water. She is one of the happiest women in the neighborhood, and intends to pipe the water to her home. So it seems that many can find water by going up on the mountain-side instead of seeking for it in the valley.

Santa Clara.

OLIVE OIL.—San Jose Mercury, Feb. 16: E. E. Goodrich of the Quito Olive Farm stated yesterday that he will exhibit this year five varieties of olive oil, labeled similar to the Italian method of designation according to seasons. There will be the oil made from the olive when it is first brought in from the trees, fresh and green; also that made from olives which have been dried. These two oils differ as to a slightly bitter flavor that is found in one and not in the other. Mr. Goodrich further stated that he had applied to the U. S. Government for authority to place samples of the Quito olive oil in the American exhibit at the Paris Exposition and have it brought in competition only with oil from olives raised under similar conditions. "There is a great difference between the olive of the plains and the olive of the hills," said he, "and if my oil from olives of the plains were compelled to compete with European oil from olive trees grown on hill-land, where perhaps trees have been bearing for 200 years, it would not be just. If they make the distinction between that from the hillsides and that from the plains, I am willing to have the comparison made, and even honorary mention from such a source would be a triumph for the American olive."

Santa Cruz.

BEET CONTRACTS.—Pajaronian, Feb. 14: Supt. Waters has been interviewing farmers this week in reference to beet contracts. A considerable increase in the contracted amount has been secured, and if this section receives a fair rainfall in the next two months there will be a large acreage in sugar beets this year. The best land in the valley is being contracted, and the acreage secured is sufficient for a heavier beet crop than the factory crushed last year. The beet factory will run this year, and it will have a big crop to handle, providing we have a fair rainfall before May. Outside of this valley 600 acres have been contracted.

Shasta.

TREES AND VINES.—Redding Democrat, Feb. 13: Monday we took a ride with C. W. Pope down to his farm and the McCoy plantation on Clear creek. We noticed thrift and improvements all along the road. Mr. Pope has just finished setting out a ten-acre orchard and is preparing to sub-irrigate the young trees. Mr. Davis, adjoining Mullen's place, has several men at work clearing land and planting trees and vines. The owner of the place adjoining McCoy's is setting out a new orchard of ten acres adjoining the old one of 20 acres. Mr. McCoy will soon finish planting an orchard and vineyard of 80 acres on land as fine as can be found in the State. The majority of his vines are the best quality of raisins, and the orchard consists of peaches, prunes, apricots, almonds, walnuts, and a few other varieties.

Solano.

STRAW-SMOTHERED SWINE.—Dixon Cor. Republican: Some weeks ago Louis Hanke missed three fine young hogs from his farmyard. Just about the same time he noticed that his straw-stack had caved in at the side where the stock had eaten under. As time rolled on and no grunters returned, he concluded that they must be entombed in the straw; so on Friday last, after a lapse of fully two weeks, he proceeded to excavate the straw-stack, and sure enough there were two of them taking their last long sleep and the other one still alive, but in a very critical condition. At this writing, however, he is convalescing quite rapidly and with proper care will survive.

LARGE ACREAGE SEEDED.—Vallejo Chronicle, Feb. 15: More land has been plowed up and seeded with grain this year than for ten years past. There is a confidence among farmers that has not been experienced for some time past, and the result is that land that has not been turned up for years is this year put to grain. As far as we can learn, the increase amounts to fully 2000 acres. One reason for the increase is the disappearance of the Hessian fly that was so destructive to crops. The outlook is splendid, and farmers do not fear for dearth of rains. The acreage in Vallejo township plowed up is very large, approximating 6500 acres.

Sonoma.

"STRAWBERRIES EVERY MONTH."—Pealuma Courier, Feb. 13: Mr. Roberts, living about six miles from town, has had strawberries every month during the past year. Last week he supplied the market here with fine ripe berries. Not little scrawny, half-ripe berries, but large, scarlet ones that would melt in your mouth.

PLANTING THE OLIVE.—Sonoma Index-Tribune, Feb. 15: The wonderful success of Col. G. F. Hooper's experiments with the olive, together with a large and growing demand for pure olive oil, has encouraged many of our farmers to plant out large numbers of olive trees. E. P. Thomson of Agua Caliente has set out this season over 600. Those set out last year,

some 500 in number, are vigorous and growing finely. Only five per cent failed to take root. These were less than three inches in height. None over that size died. Robt. F. Clark has also set out this season over 1000 of these trees, and many other farmers have planted from 100 to 500.

SONOMA VALLEY ORANGES.—The orange crop on the C. C. Carriger ranch is turning out exceptionally fine. One tree alone has netted this season \$50. There is a ready market for these oranges and in addition to those shipped to S. F., large quantities find their way to Petaluma and Santa Rosa.

SHEEP.—Santa Rosa Democrat, Feb. 16: The number of sheep in the northern part of Sonoma is much smaller than usual this year. Severe losses were sustained last season, and but little effort has been made to restore the former number, since many of the sheep raisers regard a smaller band of sheep in good condition as of greater value than a ranchful of lean, half-starved wool-wearers. The ranches need a rest, it is thought by those largely engaged in the business, as for years past the feed has been eaten to the roots and the sheep have been unable to find enough. Now the feed is abundant and the sheep, though less numerous than usual, are looking fat and clean and less like their gaunt enemy, the coyote.

Stanislaus.

SKILLFULLY TRANSPLANTED.—Modesto Herald, Feb. 14: Mr. Vogt was entirely successful in moving two orange trees, bought by Mr. Harrold, to the latter's farm near Burnett's Station. The trees are over 20 feet in height and loaded with oranges. But two oranges fell off in transporting the trees over a distance of about 17 miles. The trees were undermined, and, with their roots and dirt clinging thereto secured in a box, were hoisted into large wagons by means of blocks and tackle.

Sutter.

GRAIN PROSPECTS.—Marysville Appeal, Feb. 14: From M. Marcuse, who had just returned from a visit to the Marcuse ranch in Sutter county, a reporter learned yesterday that the outlook for large crops is excellent. Mr. Marcuse said that the early-sown grain was looking fine everywhere, and the late sown, such as is above ground, is also looking well. There has been a great deal of winter sowing, and the acreage in grain is large. The ground remains in good condition. So far, there has been no suffering on account of the absence of heavy rains during last month, and Mr. Marcuse thought that there would be no cause to complain if no rain should fall until March, in the absence of prolonged north winds. On the Marcuse place this season there are about 1600 acres in grain, and an orchard of 60 acres is being planted.

Tulare.

AMBITIOUS VINES.—Visalia Delta: From the vineyard of Daniel Wood, near Farmersville, we have received a section of grapevine of one season's growth, measuring 27½ feet; and from the vineyard of T. A. Bell, in the North Tulare country, 2200 feet above sea level, we have a runner 23 feet 7 inches in length, the growth of the past season.

LARGE FIG ORCHARD.—Visalia Times: J. D. Waugh, who resides at the mouth of Antelope valley, about 16 miles from this city, has just finished planting 60 acres in White Adriatic figs. The trees are planted 30 feet apart, and it took 2900 to cover the tract of land prepared for them. As an experiment, he intends to plant five trees of every variety of fruit that he can secure. There is no doubt that figs will thrive on his place. A tree planted there in 1876, on a hogwallow, is now 16 or 20 feet high, 19 inches in diameter, and has yielded three crops of figs a season for five years. The tree was never irrigated.

WINTER IRRIGATING.—Tulare Register: We have time and again urged the advisability of irrigating whenever water can be secured, even during the winter when the soil stands in no immediate need of water. As an example of the lasting benefits of a thorough wetting we would instance a piece of 80 acres belonging to J. B. Zumwalt. The field was thoroughly irrigated three years ago, while other land in the vicinity received no water, and the result was that last season, dry as it was, this 80 acre piece had a splendid crop while the wheat on adjacent land petered down to an absolute failure.

A SAMPLE OF WHEAT.—Visalia Times, Feb. 14: W. B. Fudge and J. W. Wooley are farming 900 acres of land owned by M. J. Wells at Bone canyon, and yesterday brought to this office a sample of the grain that was dry sown in November last. This bunch of wheat is all of 20 inches in height and has a bright, healthy appearance. These gentlemen are now seeding 100 acres to barley on the same ranch, and say that all the grain in that vicinity looks well and will not need rain for a week or two yet.

Yuba.

THE CROPS.—Marysville Appeal, Feb. 15: Although the rainfall since December has been very light, the grain crops in this neighborhood bid fair to be large. Early sown has made a good start, and much winter sowing has been done. The ground remains in fine condition, and there will be no injury to grain should no rain fall for several weeks yet.

SPRING WOOL.—The Marysville Woolen-Mills have lately purchased several choice lots of spring wool. The price paid was 20 cents, being higher than at any time since 1883. The prospect is that there will be a further advance.

THE STABLE.

Shippee's Breeding Farms.

[By J. C. H.]

The Pacific Coast has proved itself a region finely adapted by nature to the breeding and highest development of the horse. We give in this issue photo-engravings of Hawthorne and Tempest, two noted animals bred by L. U. Shippee, Mayor of Stockton. In this connection it seems appropriate to give a succinct description of the stud and surroundings of this successful breeder of horses and other fine stock.

Last week we sped over the old turnpike road behind a pair of Hawthorne colts, aged respectively four and five years, at a three-minute gait from Stockton to Mr. Shippee's Home Farm, situated five miles north of that city.

This ranch contains 1000 acres of very rich

bearing; while suckling colts, jennies and lambs are playing and gamboling in the fields close by, making a picture that should render rural life attractive.

Mr. C. D. Miller, the efficient manager for Mayor Shippee, was our guide on this occasion. We learned that Mr. Shippee commenced importing fine stock over 15 years ago. His first importation of horses was a carload of mares of the celebrated Daniel Lambert stock. His policy has been to procure strains of the best blood in all classes and breed in special lines—viz.: runners, standard trotters, roadsters, draft horses and jacks and jennies.

We append a concise description of some of the most noted animals in his stud.

Standard Trotters.

At the head is Hawthorne, whose pedigree and likeness appear on another page.

Campaign, bay stallion, three years old, 16 hands high, weight 1125 pounds, sire Electioneer, dam Lilly B by Homer, and a blood descendant of Sally Chorister. Mr. W. H.

In the colt stable there were a bay stallion 2 years old. Sire Hawthorne, dam by Echo by Rysdyk's Hambletonian.

Bay colt, 2 years old. Sire Hawthorne, dam by Daniel Lambert.

Chestnut stallion 2 years old. Sire Hawthorne; dam Mocking Bird; record 2:38 as a two-year-old; by Priam, full sister to Honesty, with a four-year-old record of 2:25½.

Dark bay stallion 2 years old. Sire Long Island, dam by Nutwood, g. dam by Trustee.

Chestnut stallion 2 years old. Sire Dexter Prince, dam by Nutwood; g. dam is the dam of Magdallah and Reliance.

Bay stallion 2 years old. Sire Elect by Electioneer, dam by Nutwood.

Thoroughbred.

John A, aged stallion, bred by John Cardinel. Sire Munday; record 1:42.

Pionic, filly, imported from Tennessee in 1887. Sired by Mr. Pickwick; sire and dam Countess, imported from England.

Two-year-old stallion, 16 hands high, by

with fine buildings, and is under a high state of cultivation.

Mr. J. H. Whiting, who last season handled the celebrated mare Tempest, record 2:19, (whose portrait and breeding appear in this issue) showed us through the stables.

We herewith give the names and breeding of some of the standard trotters and thoroughbreds under his charge:

Moses S, stallion, 15½ hands; dark bay with black points, four years old. Sire Hawthorne, dam McCracken's Blackhawk; record, 2:29½ as a two-year old.

Gloster, 16 hands, mahogany bay, no marks, black points, five years old. Sire Hawthorne, dam McCracken's Blackhawk.

Two-year-old stallion, bright bay, unnamed. Sire Hawthorne, dam by Priam, by Whipple's Hambletonian.

Birchwood, deep black, 15 hands 3 inches, three years old. Sire Hawthorne, dam Morgan Rattler; a great producer of roadsters and trotters, many of which have made records under 2:30, and g. dam of Tempest.

STANDARD TROTTER MARE TEMPEST, OWNED AND BRED BY L. U. SHIPPEE OF STOCKTON, CAL.

land, with a few great oak trees, while on each side of the road and the land leading up to the two-story dwelling house are rows of evergreen pine and cedar.

At the end of the lane stands the "Jack and Jenny barn," and close by, the tool-house, wagon-house and storehouse for implements. From this point the lane runs at right angles one-fourth of a mile, with a large sheep-house at a short distance and colt stables, corrals and paddocks intervening until the stud building is reached, all being on the left of the lane.

Opposite the stud building, on the right of the lane, is a large building 40x100 feet, with capacity for storing 200 tons of hay. It has roomy stables all around it, except in front. A short distance beyond are a succession of low structures that seem to have been erected without any eye to architectural beauty, but rather to meet a demand for more stable room.

The plan, arrangement, and construction of buildings, paddocks and environments have been made with a view to convenience, utility and comfort. Three artesian wells with windmills, and a system of pipes give an ample supply of water for this great breeding establishment.

On the adjacent orchard are apple, peach, and apricot, together with pear and fig trees over 30 feet high, and orange trees now in

Parker owns a half-interest in this magnificent stallion, a fuller description of which with out will soon appear in the RURAL.

Long Island, stallion bred in Kentucky (purchased by Mr. Ohas. Marvin for Mr. Shippee when two years old). Sire New York by Rysdyk's Hambletonian out of a Clay mare. Dam Mambrino Patchen, second dam Bonnie Scotland, and 15 straight crosses of thoroughbred.

Abbie, stallion, dark bay, six years old. Sire Abbottsford, record 2:19½; grand sire, record 2:21½; dam McCracken's Black Hawk, the dam of Ha Ha, record 2:22½; also Moses, record 2:29½ and 2:30 as a two-year-old.

California, Lambert stallion, record 2:30, bright bay, black mane and tail, 4 years old. Sire Ben Franklin by Daniel Lambert; dam by Daniel Lambert, having 34 animals in 2:30 class—the third best record in the United States and the best strain of Morgan blood.

Henry. Stallion 5 years old, bay with black points, weight 1160. Sire Hawthorne, dam by Nutwood, g. dam, dam of Reliance, 2:22½, and Magdallah, 2:23½.

Kilrain, 3 years old, bright bay. Sire Hawthorne, dam a Whipple mare. Two-year-old record, 2:35.

John C. Shelly, stallion 5 years old. Sire Hawthorne; dam Morgan Rattler, g. dam by Jim Crow, 2:29½ in a race and trial record 2:26.

King Ban, out of a Great Tom mare.

Two-year-old stallion, by Longfellow; took all first premiums at Kentucky fairs as a suckling colt.

Bay stallion 2 years old by imported Prince Charley, dam a Glenelg mare, g. dam full sister to Norfolk.

The above-mentioned 2 year-old animals were among the 22 head imported by Mr. Shippee in 1887 and 1888, and give much promise in size, style, speed and action of making noted and desirable breeding stallions.

Tilla O, who won all 2-year-old stakes in California that season.

Laura D, by Norfolk, dam Tilla O, with foal by John A, full sister to Eva Bascom by Lodi, and 15 other yearlings and 2-year-olds from following sires: Hinds, King Ban, Glenelg, Ten Broeck, Longfellow, Long Taw, Mr. Pickwick, Falested, Billet, Luke Blackburn, Norfolk, Joe Hooker, Wildidle, Woodburn, Lodi, Munday, Imported Prince Charley and mares Alameda, by Spring Bock, that won the noted stakes of 1886, and Napa Queen, by Norfolk, the dam of Nighthawk, and many other thoroughbreds.

We also visited the French Camp Farm, adjacent to Lathrop, which Mr. Shippee uses for handling colts, training and headquarters for draft horses. This farm contains 700 acres.

Sorrel stallion, two years old. Sire Hawthorne, dam by Whipple's Hambletonian.

Bay gelding, 16 hands, five years old. Sire Hawthorne, dam by John Nelson, g. dam by St. Clair.

Paladin, sorrel gelding, six years old, 15 hands 3 inches. Sire Hawthorne, dam Whipple's Hambletonian; record 2:30.

Bay mare, four years old, 15 hands 2 inches, black points. Sire Hawthorne, dam by Reuben—in training.

Two-year-old filly, by Hawthorne, dam by Old Lambert.

Two-year-old sorrel filly. Sire Hawthorne, dam by Sultan.

Sorrel gelding, 16 hands. Sire Hawthorne, dam Cole, by Gen. Dana.

Two-year-old filly, by Hawthorne, dam Motion, by Daniel Lambert. Those are a few that we saw there.

Standard Trotters—Mares.

He has in his stud eight highly bred mares by Nutwood; and others—Ida May, dark bay, 4 years old, full sister to Tempest; three by Whipple's Hambletonian; by Sultan from Almont; also Wilkes, Director and Electioneer stock. His stable includes an importation from Vermont, viz.: Seven by Daniel Lambert, one by Ben Franklin, one by Motion, one by Addison Lam-

bert, five from McCracken's Blackhawk, two by Sherman's Blackhawk, and five by Morgan Rattler, these being from the most noted families of Morgan and Blackhawk strains—among them the dam of Mt. Vernon, record 2:21.

He has also in his stud 15 Chieftains and selected brood mares from the following noted stallions: Gen. Knox, Dexter Prince, John Nelson, Elector, Geo. M. Patchen, Long Island, Joe Daniels, Old Belmont, David Hill, Priem, La Roche, McClellan, Henry Clay, Don Victor, and several other noted sires.

Including weanlings, aged horses and brood mares, his stud numbers over 300 head from the noted families above named. There are 25 weanlings by Hawthorne, and 35 by his other stallions—all standard trotters or thoroughbreds.

Draft Horses.

At the French Camp Farm is kept his celebrated Clydesdale stallion, Prince Consort, Jr.; weight, 1850 pounds. His draft horses are kept at several ranches in San Joaquin and Merced counties.

Jacks and Jennies.

He has eight jacks, with Tommy at the head of the herd; four years old, sire Castilian from imported jack and jenny from Kentucky, and 20 jennies, all bred from imported stock. During the year 1888 he sold one of his jacks to Mr. Reavis of Chico for \$3000. Of all classes, standard trotters, thoroughbred draft horses, jacks, jennies and mules, he has over 500 head.

Merino Sheep.

Mr. Shippee has been a prominent breeder of thoroughbred and high-grade merino sheep for 20 years. During that time he has made importations aggregating in value over \$40,000. He has now over 500 head which are recorded in the Vermont register and about 30,000 grades.

Berkshire Swine.

His piggery at the home ranch is well stocked with the purest and most notable strains of Berkshire hogs.

California Racers.

LEXINGTON, KY., Feb. 15.—W. R. Allen of Pittsfield, Mass., has just closed a contract with W. Corbett of San Mateo, Cal., for the purchase of the following trotting stock: Sable Hayward, bay mare by Pascora Hayward; Jet Wilkes, black filly by Guy Wilkes, all out of Sable, dam of Sable Wilkes; bay filly by Guy Wilkes, dam Ruby by Sultan; bay filly by Guy Wilkes, dam Atlanta by The Moor; Lindora Wilkes, brown filly by Guy Wilkes, dam Rosetta by The Moor and Rosetta Wilkes, bay filly by Guy Wilkes, dam Young Signal by Atherton. The price paid for the lot was \$60,000, making it the largest figure ever paid in the world for a similar number of untrained trotting-bred animals.

Are You a Music Teacher?

The best tools make the best work. The best instruction books make the best scholars. The best teachers use DITSON & CO.'S INSTRUCTORS.

The following books sell largely, and all the time:

Richardson's New Method for the Piano-forte, \$3; N. E. Conservatory Method for the Piano-forte, \$3; Mason & Hoadley's System for Beginners (on Piano), \$3, and Mason's System of Technical Exercises, \$2.50; Bellak's Analytical Method for Piano (for beginners), \$1, and Winner's Ideal Method (for beginners), 50 cents.

EVERY MUSIC TEACHER needs a full set of Ditson & Co.'s great Catalogues, describing fully the largest stock in America. An investment which pays well is a subscription to Ditson & Co.'s MONTHLY MUSICAL RECORD (\$1), which describes intelligently every new music book as it is issued, and every new piece of music; prints excellent lesson pieces and songs, discusses theories, and gives a condensed "Record" of the world's music.

SCHOOL MUSIC TEACHERS are invited to examine and use the newest of our successful School Music Books. SONG MANUAL (Book 1, 30 cents, or \$3 per dozen; Book 2, 40 cents, or \$4.20 per dozen; Book 3, 50 cents, or \$4.80 per dozen), by L. O. Emerson. Thoroughly good and interesting graded course. Also SONG HARMONY (60 cents, or \$6 per dozen), by L. O. Emerson, to be used in High Schools or for Adult Singing Classes.

From Sierra Valley.

EDITORS PRESS:—Up here among the high Sierras we are having the most remarkable winter for many years—perhaps the most remarkable ever experienced.

Last fall, there being a much smaller supply of hay in our valley than usual, owing to the shortness of last summer's crop, and many prophesying a severe winter, large numbers of horses and cattle from this section were driven to Truckee Meadows, Mason valley, Honey Lake and Indian valley. Could farmers have foreseen how mild the winter was to be, much of this stock would have been kept here, as the supply of hay in many cases would have been sufficient, for it is now selling here at a lower figure than last fall; and, notwithstanding there have been over 9000 head of beeves fed in Truckee Meadows, we are told that the price is declining in Reno.

The autumn was particularly fine, giving farmers a good opportunity to dispose of their grain crop, which was large, and though bringing unusually low prices, caused much money to be distributed in our valley.

When the time for our winter's storms had arrived, every one was busy doing the numberless last things before we should be shut in by snow-drifts; but the holidays passed with their usual festivities, and the large wood-piles which the more prudent farmers had provided, as well as many last things well finished, told that they were ready for storms.

Early in January a day's wind brought us some six inches of snow, which soon went off, and now it seems as if the spring were indeed here. The days are almost balmy, the sun shine is warm, the flowers are in bloom, and those of us who are fond of Flora's gifts have bouquets on our table every meal. The meadow larks are singing their spring songs. The honey bees are astir. A few of the ranchers on the side-hills are plowing. The horses which were not to be worked were to have been wintered on straw, but they entirely refuse to eat it, preferring the dry feed on the pasture and meadow lands, with the green grass which is starting up.

Many feel fearful of another short hay crop, but our experience is that a dry winter is usually followed by summer showers, often insuring a good yield of grain. The acreage of grain sowed in our valley increases from year to year, and notwithstanding some partial failures of crops, we feel that the prosperity of this mountain region is rapidly increasing, her resources are more numerous, and the outlook grows better continually.

MARY P. ARMS.
Beckworth, Plumas Co., Cal., Feb. 10, 1889.

Fine Offerings of Live-Stock.

Readers of the RURAL can hardly overlook the attractive announcements of live-stock for sale which are being made from week to week in our columns by Killip & Co., the well-known live-stock agents and auctioneers. This firm is doing much to advance live-stock interests by their enterprising dealings. Upon another page may be found several announcements which are worthy of attention. Five Clydesdale stallions, bred by Jas. Roberts of Alameda county, who has long been prominent in breeding circles, are fully described in the advertisement. A lot of Clydesdale mares to arrive from Australia with one of Roberts' stallions will complete the Clydesdale outfit for those who desire this popular draft-stock, or one can be suited, perhaps, with one of a lot of Australian Clydesdale stallions, also in the hands of Killip & Co. The firm keeps well informed on all kinds of live-stock and the market for them, and are, as we have said, doing much to promote the general trade.

California Horses East.

Last fall Mr. Shippee sold the two-year-old colt Motion (renamed Campbell's Electioneer) to W. E. Campbell of Kiowa, Kansas, for \$7000. Mr. Shippee showed a mile in 2:35½ the day he sold him. During the circuit last fall he won all his races, and lowered the record of the State of Kansas 21 seconds. He has been barred in all three-year-old races in that State for this year. Mr. Campbell says in a letter recently that he has been offered \$17,000 for this magnificent stallion.

A Fine Lot of Horses.

Mr. Jesse Harris of Fort Collins, Colorado, importer of Cleveland Bay, Clydesdale, Shire and English Hackney horses, has just imported a carload of selected stallions, all of which have been acclimated and in prime condition for this season's service. These stallions were selected from the best strains of blood in Europe, and are guaranteed breeders and registered in their respective stud-books. Parties interested will find this importation at the Telegraph Stables, J street, Sacramento.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requesting to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Lands For Sale and To Let.

FARMING and GRAZING LANDS.

5530 Acres; one of the finest ranches in Berryessa Valley, Napa county; a splendid stock farm, with several hundred acres choice fruit land; 300 acres now in grain; plenty of running water; commodious barns, stables, etc.; this property must be sold immediately, and is one of the best investments ever offered in this State; \$8 per acre.

Stock Ranch in Lyon county, Nevada; 5300 acres; title perfect; 400 acres in alfalfa; unlimited supply of water; will be sold with the place—985 head of stock cattle, 60 head horses, 750 tons alfalfa hay and a full line of farming utensils; this is a rare bargain.

10,000 acres on railroad in Colusa county; 3200 acres now in wheat; all level land.

640 acres, 2 miles from Germantown, in Colusa county. Two farms in Sutter county, one of 240 acres and one of 160 acres.

1440 acres in Placer county; all level. 214 acres $1\frac{1}{2}$ miles from Calistoga.

800 acres in Yuba county; \$10 per acre. 1040 acres in Placer county, 8 miles from Newcastle; well improved with fencing and buildings; 200 acres cleared; \$6.25 per acre.

5900 acres in Antelope Valley, Colusa county; 1200 acres cultivated; balance rolling; \$7 per acre; a splendid bargain.

Two bearing Orchards and Vineyards in Sutter county, near Yuba City; 80 acres each; trees 4 and 5 years old; fruit of approved varieties; these are particularly good bargains, and will be sold very low, one-half cash, balance on time, if desired, at reasonable interest.

16,500 acres in Contra Cos a county. 670 acres 2 miles from Sonoma.

S. J. STABLER, Flood Building, 809 Market St., room 1.

Agricultural and Grazing LANDS FOR SALE.

7975 Acres of fine grazing and agricultural land, including 4000 head of fine grade stock sheep; abundance of water; 9 miles from Merced City, and near Merced River; price, \$7.25 per acre; 1000 acres good wheat land. Address

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his **CLOVERDALE DAIRY FARM** of 600 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities; commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

PUBLIC AFFAIRS.

San Francisco Water-Front.

EDITORS PRESS:—Now is the time for the members of the Legislature, representing the agricultural interest, to do something of importance for their constituents.

The present law, as well as the laws of the past 20 years, have allowed the Harbor Commissioners to expend from 12 to 24 per cent of all the money received from the front, simply for salaries and office-expenses. The revenue amounted last year to \$580,152.51 and the expenses of collecting, \$138,993.05; and as the revenue is constantly increasing, it will probably be \$600,000 this year.

These expenses are largely due to the fact that the wharfage or tolls are collected from the truckmen as they deliver their merchandise or receive it upon the wharves. The quantity must be guessed at, and teams unnecessarily detained while the dimes are being counted over, after a survey has been made, and at night the collections are all handed over, if the collector is honest, and if not, then there is no help for it.

It has been recommended for several years by the Harbor Commissioners that these tolls should be collected from the ship or vessel in gross, and added to their freight bills in the same manner as the railroads collect tolls, and thus do away with a large expense, and close the door to any fraud in collecting.

The Commissioners claim they have no power to change the method of collecting without further legislation, and it should be a simple matter to do this, but there has been such a long hold on the public crib by the retainers of politicians at this point that they are as difficult to dislodge as the fruit pests of the State.

The great waste in this respect, together with the excessive cost of handling merchandise and the manufactures and agricultural product of this State, has been a wonderful drawback to the State's prosperity, and if we had the direct competition of the older States to contend with, we could not possibly succeed, under the present system of doing business.

The moving of our merchandise and general products, from ship or rail to store, mill or factory, costs at the lowest 50 cents per ton, and frequently the same article is moved several times before it is consumed or sent away. Much of the grain-milling product is first stored, then to mill and from there to the consumer, costing \$1.50 per ton for cartage, and the same may be said of a very large portion of the business of the city.

The exports and imports by rail and sea cannot be very far from 6,000,000 of tons, and if only a single cartage is charged, the bill would be \$3,000,000, but as there is much that is bulky and unwieldy that is charged extra, and a large portion that is removed several times, the cost of cartage would probably be somewhere from \$5,000,000 to \$10,000,000 annually in this city. The cost here is from five to ten times as much as it is in some Eastern cities. The tax falls upon the country consumers and producers, as cartage always goes with the bill.

In the East the railroad is taken to the mill, factory, warehouse or lumber-yard, and if possible together, to the water's edge. In Indianapolis, cars of an average, perhaps, of 15 tons, to the extent of 5000 daily have been delivered and received by the Belt Line R. R. Co. to and from all parts of the city at a charge of \$1 per car, or \$5000 daily. Here the cost would be about \$50,000 for the same labor.

The only obstacle presented against a belt-line railroad for this city is that in the southern part of the city where the bulkhead has not been built, there is a short distance where the roadway would either have to be piled or a city-front street used in part, and which is on a par with an army of 100,000 men that could not be moved, because of the failure of a few shoes for the men to arrive.

The belt railroad and an economic system of doing the business of this city is of more importance than the bulkhead or any single street. If it is probable that the cartage of this city cost \$6,000,000, which can and ought to be done for \$1,000,000 by the use of railways, it certainly should be done.

But this is only a small matter compared with the loss that is being sustained by the city in not providing facilities for doing business economically. With a belt-line road around the front 20 years ago there would be seen to-day factories, mills and warehouses, in solid blocks, miles in extent, fronting on one of the finest harbors in the world and doing a mammoth business, by reason of their superior facilities and economical productions.

The buildings, where there are any on the front to-day, look like wrecks from prehistoric times. The factories, mills and shops of the city can be found anywhere else than on the front. In early days the front was thought to be the proper place for business, but small politics has driven away much of what was there and turned a frontage more valuable than that of any other city in the Union into almost a public nuisance.

I believe that the expenses of the management of the water-front should be reduced from 24 to 5 per cent, and that a belt-line road should be built and operated by the Harbor Commissioners immediately, so that parties desiring to erect factories, mills or warehouses, or those already constructed, may have switch tracks leading to these premises if they are de-

sired, and that the State land along the front should be used, if necessary, in connection with the same in the interest of commerce, and no land leased until it can be known what may be needed for State purposes.

I am not interested personally in land or otherwise along the water-front or in any business affected otherwise than as a citizen at large, but as an old merchant and business man, as well as farmer, I view the present condition of affairs as very unfavorable to the general prosperity of the State, and it seems very plain to me that the laws in relation to the water-front should be amended at once, so that there will be no excuse hereafter for either delay in pushing the belt-line road or in closing the doors against waste and fraud.

R. G. SNEATH.

A Stanch Old Friend.

J. E. P. of Santa Ana, in a note advising us of a remittance, says: I have been a reader of the RURAL PRESS for many years and have derived much useful knowledge as well as pleasure from its valuable columns. It is a paper that should be in every family on the Pacific Slope. The reading in it is of the best from beginning to end. May it live long and prosper in its good work is my wish.

THE LABOR SUPPLY.—The committee lately appointed to investigate the condition of the labor market in this State reported on Tuesday, at a meeting of the Executive Committee of the State Board of Trade, that while there are enough laborers in the State to meet all requirements, the supply is not well distributed. In many localities where labor at good wages is wanted for short periods, men cannot be found, and at other places where labor is indispensable, on farms and in the fruit orchards, it cannot be obtained. In a few months there will be a large demand for laborers to harvest fruit and grain, and the committee recommended that registers for the free registration of all who may apply for work be distributed throughout the State.

IN KILLIP & Co.'s notice of a coming sale of standard bred trotters, last week, our types accidentally added ten seconds to the record of "Alfred S.," making it 2:31, whereas it should have read but 2:21. The stock, of which there are 14 head all told, belongs to the estate of the late H. W. Seale, and the sale is to take place at the Bay District track on Thursday, 28th instant. Further particulars as to the horses, terms of sale, etc., appear in the advertisement, which we reprint (corrected) in the present issue.

THE EXPERIMENT STATIONS.—In the California State, February 18th, Senator Caminetti's resolution, giving the assent of the State of California to the grants, purposes and conditions of the Act of Congress entitled "An Act to establish agricultural experiment stations in connection with the colleges established in the several States, under the provisions of an Act approved July 2, 1862, and of the Acts supplementary thereto," approved March 2, 1887, was adopted.

PREFERS THE ACME.—A large farmer in Minnesota writes: "I do not know of anything that will do the execution of the 'Acme' pulverizing harrow, clod crusher and leveler and stay with a man so long. The one I have has been in use for nine years constantly, and will last another nine years when I get the coulters sharpened." The secret of its success is that it cuts the entire surface of the ground, and, if properly managed, leaves no uncultivated ridges just below the surface.

A WISE DISTINCTION was made by T. V. Powderly, a few nights ago, in an address on the history of the K. of L. Referring to the introduction of machinery for doing the work of the world, he said it is not labor-saving but wealth-producing machinery, and that the great problem of the future for workingmen is how to adjust themselves to the new order of things so as to reap their full share of the benefits.

POSTOFFICES have been established at Osgood, San Diego Co., at Divide, San Diego Co., at Fleener, Modoc Co., at Lapresa, San Diego Co., at Santa Marguerita, San Luis Obispo Co., and at Swamp, Fresno Co.; and C. A. Rice, Geo. F. McMurray, Mrs. S. A. Fleener, Chas. Schaefer, Reuben M. Bean and Mrs. Clara Bentley have been appointed postmasters or postmistresses of the respective offices.

J. S.

Of Acampo, renewing his RURAL subscription in advance, adds the kind remarks: "We all like your paper. It is all you promise—good, clean, and a credit to any community."

GREAT SALE OF SHORTHORNS.—We desire to direct attention now to the auction sale of 90 Shorthorn cattle, to be held at Sacramento on the 4th of April, an advertisement of which appears in this issue. We may have more to say respecting it later.

PROTECTING YOUNG TREES.—Planters of fruit trees will be interested in the advertisement of "Hay's Tree Envelope" on another page. It offers a cheap and effective method of protecting young trees from sun-burn, borers and rabbits.

Hawthorne and His Famous Family.

(Continued from page 169)

his progeny is mentioned as now in the hands of the trainers. This horse is one of the most famous of the Nutwood stock, as he has three in the 30 list; three below 30, and is the sire of Tempest (2:19) and of at least a half dozen others that will go in this season. He has never made a public standing, having been kept private.

One of the notable Hawthorne family is the mare Tempest, whose portrait is given on page 169. She is a dark bay of fine form and lofty carriage, and gifted with a long stride. Her proportions are good; she stands 15 hands 3 1/4 inches high and is full of grace, as her portrait shows. Tempest is six years old. She is by Hawthorne, dam by Chieftain; second dam by Morgan Rattler; third dam by Jim Crow. As a three-year-old she was entered with aged horses and made a record of 2:29. In 1887 she won the four-year-old stakes at Sacramento in three straight heats and made a record of 2:23. At the Bay District race-track, the same year, she made a record of 2:21 1/2 against aged horses—the best of any four-year-old that year in the United States—beating Rosie Mc and Stanford's stable at Sacramento and winning every race she was entered for in that year for four-year-olds.

In 1888 Tempest was placed in the 2:22 class, and her first race at Oakland she won in three straight heats, making a record of 2:21 1/2. She also won a great race in Stockton last year, against a good field of horses, and five heats in the race, winning the first heat in 2:20 1/2, and the last heat in 2:19, and the race. Tempest has made the remarkably clean record of winning every race she has contended for since she was four years old.

Tempest is a wonderfully perfect animal and is a credit to her royal sire, as well as to her excellent ancestry on the side of her dam.

ENLARGING RIGHTS OF HOMESTEADERS.—Senator Mitchell of Oregon has introduced in the Senate a bill, which was referred to the Committee on Public Lands, enlarging the rights of homesteaders on public lands. The bill provides that when any person entitled under the existing laws to a homestead of 160 acres, and for such purpose locates on 80 acres of surveyed land subject to homestead entry under the existing law, he shall be at liberty and shall have the right to extend the boundaries of his claim over any unsurveyed land adjacent to his entry to the extent of 80 acres additional, and when such lands are included within Government surveys the boundaries of his claim shall be adjusted in accordance with the Government lines.

Cook Stock Farm.

The attention of horsemen is called to the advertisement of Standard trotters and Cleveland bay stallions of the stud of Cook Stock Farm. These animals are from royal strains of blood, and the prices asked for service are unprecedentedly low. The management of this great breeding establishment is in the hands of expert horsemen, and extra care will be taken of all brood mares placed in their hands. Parties wishing to breed to any one of these stallions can leave their brood mares at Oakland, Martinez or Haywards, and they will be taken to the "farm" free of charge.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers Block, Rochester, N. Y.

SEASON OF 1889. COOK STOCK FARM.

STEINWAY 1808.

Three-year-old; record, 2:25. Sire of Strathway, 3-year-old; record, 2:26. Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19; and 25 others with records better than 2:30, and the dam of 5 with records from 2:18 to 2:28.

First dam Abbess (dam of Solo, 2:28) by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; he by Halcorn, a son of Virginian. Second dam by Marshal Ney; he by Imp. Emancipation. Third dam by Bretrand, a son of Sir Archy.

Steinway full brother to Solo, 2:28, and Soprano (the dam of C. F. Clay, 5-year-old stallion, record, 2:18); also Eminence, 4-year-old, record, 2:21, and Stockbrige, 2:28.

TERMS, \$100 for the season.

CRESCO 4908.

Full Brother to SPARTAN, 2:24.

Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19, and 25 others with records better than 2:30, and of the dams of 5 with records from 2:18 to 2:28.

First dam Alla, record 2:32 (the dam of Spartan, 2:24), by Almont, sire of Fanny Witherspoon, 2:16; Piedmont, 2:17, and of the dams of J. T. Thompson, 2:17, and Catchfly, 2:18. Second dam (the dam of Henderson, 2:27) by Brignoli, a son Mambriño Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:23. Third dam by Cripple, a son of Medoc (thoroughbred). Fourth dam by American Eclipse; he by Duroc.

Strathmore by Rysdyke's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trinkett, 2:24, and Tamboul, 2:44; Almont by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambriño Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:08, and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 2:26, 6th heat, 2:26.

First dam Katie G (the dam of H. R. Covey, 3-year-old trial, 2:27), by Electioneer, the sire of Mainstet, 2:16 and of Sunol, 2-year-old record, 2:18, and of eight others with records of 2:20 and better. Second dam Fanny Malone, record, 2:36, trial, 2:23, by Niagara (sire of Cobb, 2:31, double team record, 2:28), and of Lady Hoag, trial, 2:18. Said to be by Mambriño Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY. BARON HILTON.

No. 584 E. C. B. Stud Book.
Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189),

First dam by Sportsman (291).

Second dam by Luck's All (188).

Third dam by Cardinal (47).

Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.

Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" case, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire beating 20 others.

First dam Whalebone (355), first premium Gt. Yorkshire.

Second dam by Luck's All (188).

Third dam by Lummercock (302).

Royal Studley is a very handsome, bright bay, 16 $\frac{1}{2}$ hands high, weight 1500 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLEON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 243; he by Master George 203, by King George 160; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Teesdale, and second premium at Bowes, England, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Bennet's Stables, Martinez, or to Geary & Grindie's Stables, Hayward, will be forwarded to Farm free of Charge.

Address:

COOK STOCK FARM,
DANVILLE, CAL.

FOUR SHORTHORN BULLS FOR SALE.

One and two years old; Reds; are Bates blood, of good milking families; are good animals. Recorded in Vols. 33 and 34. Having no place for them, must be sold.

Address:

P. H. MURPHY,
Perkins, Sacramento Co., Cal.

BADEN FARM HERD Of Short Horn Cattle and Dairy Cows.

Catalogues and Prices on application to

ROBERT ASHBURNER,

Baden Station San Mateo Co., Cal.

PERCHERON HORSES ONLY.

I offer for sale at my ranch, on Clear Lake, near Lakeport, pure-bred Percheron Mares and Horses of the choicest families. Pedigrees recorded in the Percheron Stud Book of France and America. They are principally the Brilliant, Caesar strains of blood. Address

WM. B. COLLIER,

Lakeport, Cal.

FOWLER'S HEALINE

—FOR—

Horses, Cattle, Sheep, Pigs and Dogs.

It is the most wonderful Ointment at present known for Cuts, Stake-Wounds, Saddle-Sores, Broken-Knees, Sore Shoulders, Cracked Heels and Grease, and all manner of Bruises, Old Sores, etc., in Horses, Cattle, Sheep, Pigs and Dogs.

Send for testimonials. Warranted satisfactory. Post-paid, \$1. Prepared only by

T. FOWLER,

125 South Twentieth St., Pittsburg, Pa.

Graduate of Ontario Veterinary College, Honorary Fellow of Ontario Veterinary Medical Society, Graduate of McMahons School of Veterinary Dentists.

Veterinary Infirmary, 226 8th St., Oakland.

Telephone No. 427.

RESIDENCE—331 Golden Gate avenue, San Francisco.

Telephone No. 3069.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address.

DEWEY & CO.,

220 Market St., S. F.

Headquarters for all Varieties of FANCY CHICKENS, DUCKS, TURKEYS, GEESSE, PEACOCKS, Etc.

EGGS FOR HATCHING

Publisher of "Niles' Pacific Coast Poultry and Stock Book," a new book on subjects connected with successful poultry and stock raising on the Pacific Coast. Price, 50 cents, post-paid. Inclose stamp for information.

ALSO BREEDER OF

Jersey & Holstein Cattle, and Hogs.

Address, WILLIAM NILES, Los Angeles, Cal.

REGISTERED SHROPSHIRE SHEEP AND BERKSHIRE PIGS.

IMPORTED FROM ENGLAND DIRECT.

GEO. E. DUDEN, Proprietor,

Importer and breeder of Thoroughbred Poultry, 5 miles southeast of Sacramento, near Lake House, on the upper Stockton road. P. O. address, Box 376, Sacramento, Cal.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 20, 1889.

The cooler weather of the past week is said to have improved the prospects of the grain crop. This has been reflected in the market by buyers bidding down for options. In trading in nearly all articles of farm products there was more life the past week, yet the volume of business is still light. The European and Eastern wheat markets have fluctuated some, with a downward tendency abroad, and an upward tendency in Chicago. The latter, it is said, is based on a corner in March, April and May options. The following is to-day's cable:

LIVERPOOL, Feb. 20.—Wheat—Quiet but steady. California spot lots, 75 to 7d to 7s 10d; off coast, 38s 3d; just shipped, 38s 3d; nearly due, 38s 6d; cargoes off coast, firmer; on passage, firm, but not active; French country markets, firm; wheat in Paris, quiet; flour, steady; weather in England, some rain.

Foreign Grain Trade.

LONDON, Feb. 18.—The *Mark Lane Express*, in its weekly review, says: British wheat, since the beginning of the month, has slightly improved, and is still very low. Millers have difficulty in procuring really sound English wheat of fair weight under 34s. American flour was held at a slight advance in values. Foreign wheat is subject to two different tendencies. The growing continental demand for California wheat removes, to a great extent, the depression induced by excess over the average on passage. If the continent takes the surplus it will strengthen the English markets, which are aided by a certainty that Australia will abstain from wheat shipments. In red wheat, depressing influences prevail. Russia, last week, increased her shipments from 63,780 qrs. to 323,684 qrs., and India was being proffered at a low price. Barley was weaker, except the finer sorts. Oats, beans and peas are reasonably firm. Corn is unsettled; new American averaged 21s; round, 23s.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Feb.	Mar.	Apr.	May.	June.	July.
Thursday	78 3/4	79 3/4	79 3/4	79 3/4	78 3/4	78 3/4
Friday	78 3/4	79 3/4	79 3/4	79 3/4	78 3/4	78 3/4
Saturday	78 3/4	79 3/4	79 3/4	79 3/4	78 3/4	78 3/4
Monday	78 3/4	79 3/4	79 3/4	79 3/4	78 3/4	78 3/4
Tuesday	78 3/4	79 3/4	79 3/4	79 3/4	78 3/4	78 3/4

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	O. C.	P. S.	N. D.	Market.
Thursday	38-9d	38-9d	38-9d	Steady.
Friday	38-9d	38-9d	38-9d	Quiet.
Saturday	38-9d	38-9d	38-9d	Firmer.
Monday	38-9d	38-9d	38-9d	Firm.
Tuesday	38-9d	38-9d	38-9d	Steady.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

Day.	Feb.	Mar.	Apr.	May.
Thursday	96	97	99 1/2	99 1/2
Friday	97	97	99 1/2	99 1/2
Saturday	99	100	101 1/2	102 1/2
Monday	97 1/2	98 1/2	99 1/2	100 1/2
Tuesday	97 1/2	98 1/2	100 1/2	101 1/2

The closing prices for wheat have been as follows, at Chicago:

Day.	Feb.	Mar.	May.	July.
Thursday	103 1/2	103 1/2	106 1/2	93 1/2
Friday	104 1/2	104 1/2	107 1/2	94 1/2
Saturday	107	107	111	95 1/2
Monday	106 1/2	107 1/2	109 1/2	94 1/2
Tuesday	108 1/2	109 1/2	112 1/2	94 1/2

NEW YORK, Feb. 20.—Wheat—\$1.01 3/4 for May, \$1.01 1/2 for June and 97 1/2 for July.

CHICAGO, Feb. 20.—Wheat—\$1.07 1/2 for cash, \$1.08 for February, \$1.08 1/2 for March, \$1.10 1/2 for May and 95 1/2 for July.

Eastern Wool Markets.

NEW YORK, Feb. 18.—Wool is quiet. A little more time, perhaps, is to be allowed some steady buyers, but all straight-grade parcels are rated as before at all the large markets. The near approach of the foreign clothing stock creates no depression. Sales: 4000 lbs. scoured California; 36,000 lbs. Mexican; 20,000 lbs. Montevideo, pulled; 5000 lbs. XX; 10,000 lbs. scoured, pulled; 5000 lbs. short extra pulled; 5000 lbs. gray East India; 12,100 lbs. Noles; 50,000 lbs. domestic and 227 bales foreign on private terms. At Boston the market is dull, but full confidence is expressed for the future. Sales: 45,000 lbs. California spring, and nearly 2,000,000 lbs., mainly domestic, at full current rates. Philadelphia seems to have the weakest spot of trade. The stocks are light and broken, but no market deviation is mentioned in prices for fair trade in territorial fleeces.

Miscellaneous.

NEW YORK, Feb. 18.—Dry hides are more animated, and 1/2 cent better on the best grades, making California 16c. Favorable future sales exceeded the receipts.

Dried and canned fruit is without incident.

Lima beans are readily placed at \$2.90.

The hop market is in good hardening form. High interior rates have turned a considerable demand to this point. The Pacific Coast obtains a good share of business. State choice, 22@23c; common to prime, 15@21c; Pacific 14@21c; all old, 5@11c. Brewers pay 18@20c.

Local Markets.

BAGS—The market for Calcuttas has a firmer tone, due to an improvement in the crop prospects, and also a report that the jute crop prospects in India are not flattering, while in Russia the advance in the rouble has a direct bearing in favor of the bull interests. In our market, spot are quoted at 7 1/2 @ 7 3/4, and June delivery at 7 1/2 @ 7 3/4.

BARLEY—Cooler weather and a report that the outlook is now favorable for a good crop, have a depressing effect on the market; yet the very low prices tend to keep holders not pressed for money from pressing the market. In futures, trading on Call has been light, with prices showing a decline. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—100 tons, 94c. Buyer season—600 tons, 85 1/2 c @ cwt. Afternoon

Session: Buyer 1889—500 tons, 94c. Buyer season—100 tons, 85 1/2 c @ cwt. 100, 85 1/2 c @ cwt.

BUTTER—The market is in a demoralized condition. Distant points that have heretofore drawn their spring supplies from us are taking sparingly, owing to the active competition of handlers of Eastern creamery butter. The immediate future of the market it is quite difficult to forecast at present. Dealers, at this writing, do not look for much of an improvement in the near future.

CHEESE—The market is still crawling, under liberal receipts and dealers buying sparingly.

EGGS—The market has a stronger tone, under lessened receipts and a good demand.

FLOUR—The market is quiet, but steady.

WHEAT—The market continues under the bear influence. Whenever there are signs of a recovery, the bears jump in and hammer prices down on Call, which necessarily has an unfavorable effect on the sample market. The market is also unfavorably influenced by better crop advices. Trading on Call, the past week, was quite active, with lively fluctuations. The following are to-day's Call Board sales:

Morning Session: Spot, season's storage paid—100 tons, \$1.42; 100, \$1.43. Buyer 1889—100 tons, \$1.49; 900, \$1.48 1/2; 300, \$1.48 1/2; 200, \$1.48 1/2; 500, \$1.48 1/2; 100, \$1.48; 500, \$1.48 1/2; 100, \$1.48 1/2. Buyer season—400 tons, \$1.45 1/2; 500, \$1.45 1/2; 600, \$1.45 1/2 @ cwt. Afternoon Session: Buyer 1889—100 tons, \$1.48 1/2; 400, \$1.48; 300, \$1.48 1/2; 400, \$1.48 1/2. Buyer season—100 tons, \$1.45 1/2; 200, \$1.45 1/2 @ cwt.

The following tables give the highest and lowest prices paid on Call during the past week:

	S. S.	B. S.	B. '89.	S. '89.	B. '89.
Thursday	146 1/2	146 1/2	149 1/2	149 1/2	149 1/2
Friday	146 1/2	146 1/2	149 1/2	149 1/2	149 1/2
Saturday	146 1/2	146 1/2	149 1/2	149 1/2	149 1/2
Monday	146 1/2	146 1/2	149 1/2	149 1/2	149 1/2
Tuesday	146 1/2	146 1/2	149 1/2	149 1/2	149 1/2

—*New. 101d.

Market Information.

Cereals.

H. Kains Jackson writes to the *London Farmer*, Feb. 2, as follows: Weather has been better and the markets worse. Farmers' samples have been wanting in condition, and on that account many lots of wheat in the past week could only be sold at 1s per qr. reduction. In foreign lots there has also been some decline in price, although not from the same cause. However, the best home and foreign samples have maintained previous value. Some large holders keep confidence and withdraw offers from an unwilling market. Reports from the country, of growing crops, are but little heeded at this season. Such observation as I have made makes the impression that wheat and winter barley are in good plant, and thriving in growth, while the meadows keep of a healthy green. Accounts from France also infer that the growing crops have had a good start. The English farmers' old liking for wheat survives the abatement of price, and the crop remains a favorite for its straw, its convenience in rotation, and its surety of not being a complete failure. Thus, with the slightest encouragement from the markets, the wheat area would quickly return to its old importance. Probably the breadth planted this season will equal that of 1888.

The *Mark Lane Express*, Feb. 2d, reports as follows: The deliveries of English barley at the country markets have been heavy, and since the new year an exceptionally large quantity has been thrashed. The result of such thrashings is said to be very disappointing—quantity, as well as quality, proving in many cases much below the mean. Last week Indian wheat shipments amounted to 58,000 qrs. against 6000 qrs. in the corresponding week of 1888. The wheat acreage shows a slight diminution, a trivial increase in the northwestern provinces being rather more than counterbalanced by a diminished cultivation in the central provinces, Berar and Bombay. The most important of Indian wheat-growing districts, the Punjab, shows no change.

In the local markets wheat, the past week, was fairly active considering that it is the turn of the year and also that spot tonnage is not in liberal supply, although to arrive there is an over-supply due within the next 60 days. The foreign markets advanced and then shaded off. The weakening was caused by heavy shipments from Russia and also by the fact that European consumers keep well to the windward, and will not anticipate their wants to any great extent unless the outlook for this year's crops shall prove more unfavorable than is now reported. The advance in the price of Russian roubles, no doubt, has a decided bearing in promoting a large export movement from that country. While the advance rate helps the Russian farmer, it cuts into the exporter's profits.

Advices from the interior are, so far as the absence of rain is concerned, very conflicting and decidedly puzzling. There can be no doubt but on the light sandy soil rains are wanted, but on the heavy land the crop is not suffering yet, although a well-distributed rain would be of benefit, while its absence for a fortnight will not create any serious apprehension. In this State, owing to its varied climate and soil, there is never a total loss of any crop, for while one section will have almost a failure another will have a large yield.

Barley has held to steady prices throughout the week, notwithstanding the bears have exerted all their influence to send values to a lower level. The mainstay of the bulls is, as yet, the dry weather and also that prices are very low. The consumption of feed, which fell off, is again increasing. Brewing grades are firmly held, but there is no essential change in quotations. The stock of bright, heavy brewing is not large and any increase in the demand would be responded to by a higher range of values.

In oats the market has exhibited a steadier tone.

Buyers still operate cautiously owing to the seemingly well-established policy of Oregon dealers to flood this market as soon as prices show an upward tendency. The consumption has been largely stimulated by the low range of values the past three months.

A setting back in the price of corn caused the receipts to shade off, which has naturally been followed by a steadier feeling in the market.

In both rye and buckwheat there is nothing new to report.

Fruit.

Choice oranges continue to come forward sparingly, yet the market does not appreciate. This, doubtless, is owing to the heavy receipts of poor to good, which are forced on the market at the best obtainable prices. This necessarily causes buyers to hesitate in bidding up for the better qualities, even when in want of them. Free shipments of good to choice in good keeping condition are being made up north. The consumptive demand is increasing, notwithstanding the cool weather.

The *New York Journal of Commerce* reports the receipt at that port of Florida oranges by the car in bulk. To keep the different qualities separate, partitions were run in the cars, and to keep them from mashing or injuring, layers of boards or coverings were laid over them at the height of from 12 to 18 inches. It is claimed that by sending them in bulk there is a saving in boxing and wrapping each orange in a paper, besides, the car carries more fruit loose than when boxed.

Apples are in lighter supply, which is offset by a poor inquiry.

For limes and lemons the market is without change. The cool weather restricts the demand.

In dried fruits, there is a better feeling, with the prices suffer, due to the market being well cleaned up. The buying was chiefly for shipment to the Central States, although Oregon, Washington, Montana and Idaho drew considerable. Sales of peaches were made at from 1/2 to 3/4 c per lb over the prices paid the previous week.

Feedstuff.

In ground feed the market has ruled steady and fairly firm throughout the week under a slow but steadily increasing consumption.

In hay the receipts have been in excess of the demand. Much of that received came by rail and having to be removed at once was forced on the market, necessarily causing a weakening in prices. The buying interest was also aided by unsettled weather, but with more clouds than rain.

Live-Stock.

Bullocks continue in heavy offerings, with Nevada selling. At the present low prices, fed bullocks are netting a loss. In the southern part of this State and some of the coast and central counties feed is excellent and cattle are taking on flesh. These will soon be on the market. Choice mutton sheep are still scarce, but it is claimed that heavy offerings will soon be in order, when a lower range of values is looked for. For milch cows there is a fair demand at previous quotations. For small calves there is a good demand. Spring lambs are weaker, under stronger selling. In horses, there is nothing new to report outside of a good inquiry for single-footers and matched teams.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 6 1/2 @ 6 3/4 c @ lb; dressed, 9 1/2 @ 10 c @ lb; soft, 5 1/2 @ 6 1/2 c @ lb; dressed, 8 1/2 @ 9 1/2 c @ lb. Stock hogs, 4 @ 5 c @ lb.

BEEF—Stall fed, 7 @ 8 c @ lb; grass fed, extra 6 1/2 @ 6 3/4 c @ lb; first quality, 6 @ 6 1/2 c @ lb; second quality 4 1/2 @ 5 1/2 c @ lb; third quality, 3 1/2 @ 4 1/2 c @ lb.

VEAL—Small, 8 @ 9 c @ lb; large, 7 @ 8 c @ lb.

MUTTON—Wethers, 6 1/2 @ 7 c @ lb; ewes, 6 1/2 c @ lb; lamb, spring, 12 1/2 @ 15 c @ lb.

Vegetables.

Asparagus comes in sparingly, causing fancy prices to obtain. Green peas are easy. String beans are in light receipt. The receipt of tomatoes is irregular, causing prices to fluctuate.

Cold, frosty nights the past week have been against outdoor gardening in the bay counties, setting back all kinds of vegetable plants.

Choice, well-selected onions have moved off more freely. The demand was chiefly to fill distant orders, although the local trade took fair quantities.

New potatoes are, as yet, in light receipt. The quality shows a slight improvement, but prices do not. Choice old, in good condition, move off fairly well. Poor are hard to place, even at concessions.

Miscellaneous.

From the *Commercial News* of Feb. 20th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	216,911	208,120
On the way to neighboring ports	38,647	79,690
In port, disengaged	31,574	44,495
In port, engaged for wheat	25,385	46,728

Totals.....312,457 379,033

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to Feb. 6th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	928,340	5,926,949
Flour, bbls.	458,442	475,084
Barley, cts.	1,182,222	428,638

In poultry there is a stronger feeling for ducks, young roosters, broilers, and turkeys. Choice game outside of hares is doing slightly better.

East-bound overland shipments of produce from California in January were as follows: 20,739 cents barley, 13,237 cents beans, 911,210 pounds canned goods, 13,666 gallons brandy, 280,495 gallons wine, 350,110 pounds dried fruit, 802,100 pounds citrus fruit, 166,490 pounds hides, 100,760 pounds honey, 115,530 pounds hops, 169,400 pounds raisins, 949,890 pounds wool, and 342,190 pounds Australian wool.

The new clip of wool will, it is said, begin to come in toward the forepart of March; in the meantime the local market is inactive. It is generally claimed that this year's clip will be of good quality, that is, will average cleaner and lighter than did that of 1888.

Choice hops are more inquired for, but the light

available supply on this coast causes holders to entertain stronger views, particularly with the Eastern and European markets showing signs of advancing.

Beans continue heavy. It looks as if the more choice are being concentrated. While this is the case those buying do not appear disposed to pay above certain figures.

Nuts continue heavy and in buyer's favor.

Choice extracted honey is in light supply. Comb is reported to be in large stock. The outlook for this year's crop is said to be better than at the same time in 1888.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations. WEDNESDAY, Feb. 21, 1889.

ADRIANCE "BUCKEYE" MOWERS.

ADRIANCE ENCASED GEAR MOWER.

Size B cuts 4 feet 3 inches.
Size A cuts 4 feet 6 inches.

The size A and size B Mowers have a tubular iron frame of great strength and simplicity, which is made in one piece, and dispenses almost entirely with bolts. All openings for the shaft bearings are bored simultaneously by special machinery, and an absolute accuracy in position and line is obtained, impossible to be found in any other Mower made.

SIZES "F" AND "G."

These are our latest improved Mowers, and their complete success is attested by the fact that to meet the demand for them we were obliged to produce a supply for the season of 1888 that was a large increase over their sales of the preceding year.

Size F, 32-inch Drive Wheels, 5-foot cut.
Size G, 36-inch Drive Wheels, 6-foot cut.

STOCKTON COMBINED HARVESTER & AGRICULTURAL WORKS

THE MILLER LIGHTNING HAY PRESS.

AWARDED
First Premium at
State Fairs, 1884,
1885, '86, '87 & '88

AWARDED
Gold and Silver
Medals at Nevada
and California
State Fairs, and
won contest money
of \$50.

Requires but Four Men
and Two Animals to
do Rapid Work.

CAPACITY 30 TONS PER DAY,
PATENTED May 25, '85.
For Standard Size Baling Press,

Or seven and a half tons per day for each man employed, which is more than has been or can be accomplished by any other Press yet manufactured. Twenty tons a day with Tight Baling Press. Can put ten tons in a car. Satisfaction guaranteed.

Does not require Hay Stacks
built to suit our Press.

WOOL PRESSES
TO ORDER.

The "STAR" Double Shoe CLEANER

COMBINED HARVESTERS,
Awarded First Premium at State
Fair, Sacramento, Sept. 24, '87.
(PATENT APPLIED FOR.)

The "STAR" Double Shoe CLEANER
STATIONARY THRESHERS.

We also build to order the "Star" Cleaner with sufficient capacity for any threshing machine. It is mounted on trucks and can be set by the side of any "thresher," the power being transmitted to it by means of a counter shaft on the thresher, or belt from the engine. The grain is conducted to the hopper by an elevator extending from the grain auger of the thresher to that of the Cleaner.

HOUSER COMBINED HARVESTER.

Received First Premium, State Fair, Sacramento.

No Experiment! No Failures!
NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and large grain fields with heavy grain. Always victorious in competitive trials. They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an acre over and above Heading and Threshing. Have our Premium Extra "Star" Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 14-foot Houser I bought of you this season fills the bill right up to the handle. I have cut 1200 acres; have threshed 628 bags of wheat in one day, averaging 140 bags for six days. The Star Cleaner and Improved Shoe are perfect, and last, but not least, I turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I have one of your Star Cleaner and Improved Shoes on my Houser Combined Harvester, and can say that the cleaner is far superior to any I have ever seen in barley, being able to return unboarded barley and pieces of heads direct to the cylinder, something that everybody can appreciate that has run a Harvester. The Cleaner is of sufficient capacity, I having threshed 650 sacks a day. It is well made and very durable. The new shoe is perfection. I consider the Houser very strong and durable, and as light draft as machines of lighter build of same capacity.

A. GRAFFIS.

BIGGS, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I bought one of your 16-foot Houser Harvesters this season and cut my crop of 1200 acres with same without any expense for extras. The Star Cleaner and Improved Shoe are perfection. Heretofore, when using another make of Harvester, I had to have all my grain recleaned at an expense of \$800 or more, but with my machine it was not necessary, as the grain was clean enough for seed as it was taken from the spout, and I only regret that I did not buy one two years ago, and I would have saved over \$5000. I prefer the Improved Houser to any other make of Combined Machines, and would recommend it to my friends in need of a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 16-foot Houser Harvester that I bought of you this season, with the Star Cleaner, gave entire satisfaction, and, I think, is the best Harvester in the market. Will recommend it to anybody or friend that wants to buy a Harvester.

J. W. HUMPHREYS.

Also Manufacturers of "Star" and Angle Sieve Grain Cleaners, Curved Standard Gang Plows and Plow Extras, Passenger and Freight, Motor, Cable and Horse Cars.

Office and Works, cor. East & Main Sts., 4 blocks East of S. P. R. R. Depot, STOCKTON.

A Great Cattle-Growers' Union.

Our readers have already been informed of the disposition among the range stock-growers of the great Central States and Territories to combine to overcome evils inflicted upon their interests by combinations of slaughterers and dealers in the great receiving cities of the West. The movement has progressed to formal organization, and it has been decided to incorporate the company as the American Live-Stock Commission Company, with a capital stock of \$150,000 and headquarters at Kansas City and Chicago. The incorporators will be Samuel Lazarus of Texas, A. Gregory of Illinois and Nicholas T. Eaton and Thomas B. Bugy of Kansas City. Articles of incorporation will be filed in Springfield, Ill. The idea of the promoters of this movement is to enable them to sell their stock at the highest price and with the least expense possible, and with that end in view headquarters will be established at Kansas City and Chicago, with branches at Wichita, Kas., Fort Worth, Tex., and possibly Omaha, where stock will be received and sold on the commission plan. The new company will not confine its business to its members, but will receive stock from others and will do a general stock commission business on a large scale.

Some idea of the magnitude of the movement may be had from the fact that the members of the organization now have 163,000 head of stock ready to bring to market. It is thought that as the movement becomes generally understood nearly every cattle-raiser in the West will join the company and make it a gigantic combination, which will enable the stock-raisers to practically do their own selling. The association believes itself to be strong enough to prevent combination of dealers and packers to reduce prices below a rate remunerative to growers.

A DECISION ON WATER APPROPRIATION.

The California Supreme Court has reversed the judgment of the Superior Court of San Diego in the case of Maria de Necochea vs. Minerva Curtis. The action was originally brought to restrain the defendant from diverting water flowing to and upon the plaintiff's land. The court below gave judgment for the defendant. The plaintiff is owner of 160 acres of land in

QUARANTINE GUARDIANS.—The State Board of Horticulture has just made a long list of appointments of quarantine guardians for the different districts of San Bernardino county. These appointments are under the new law, and will be followed by others in other counties of the State. It will be the duty of the quarantine guardians not merely to see that the laws are complied with, but to do their utmost to

Another Seedling Apple.

We give another of our series of California seedling fruits, the engraving being a photo-facsimile, made direct from the fruit itself by the Dewey Engraving Co. The apple is the Walsh Seedling, sent us last November by Jas. Waters of Watsonville, the well-known fruit-grower and nurseryman. Mr. Walsh of Aptos,

Santa Cruz county, found two seedling apple trees growing in his flower garden in such a situation as to lead one to guess that some one eating an apple had thrown the seed from the window upon the flower-bed below. Out of curiosity the little trees were transplanted, and after being two years in its new situation, one of them bore 13 apples, the third year hardly any and the fourth year quite a crop again. The fruit grows in clusters, at least four in a cluster, at the very ends of the limbs. The fruit is all of very large size.

Seeing the apple shown by Mr. Walsh, Mr. Waters of Watsonville secured buds and propagated the variety. At the start, he says, the tree does not seem to be a strong grower, but makes a fair sized tree

Photo-facsimile.

THE WALSH SEEDLING—AN APPLE ORIGINATING IN SANTA CRUZ COUNTY.

Dewey Eng. Co., S. F.

San Diego county, through which extends a canyon in which a natural stream of water flowed. The source of the stream is in a spring which in 1880 was on public land. The defendant settled on the land in 1880, and has since acquired a title to it. In the same year the defendant constructed a ditch and diverted the waters of the spring upon her tract of land. The Supreme Court holds that the defendant, when she obtained title to her land, did not acquire a right to the exclusive water of the spring. In this State it has always been the custom for persons to go upon the public lands and appropriate waters for all useful purposes, and the right so appropriated has always been good against any subsequent appropriator not having derived rights from the Government.

supply the State Board of Horticulturists with correct information concerning their various districts.

FORESTRY COMMISSION.—The Governor has appointed Senator F. J. Moffitt, John D. Spreckels and Walter S. Moore as members of the Forestry Commission. Senator Moffitt takes the place of Abbot Kinney, whose time has expired. The retirement of Mr. Kinney will be regretted by those who know how much of the work of the board has devolved upon him, and how zealously and intelligently he has performed it.

PHILADELPHIA is filling up with Chinamen. They are principally engaging in the iron business.

at two years old. Mr. Waters considers the tree a seedling of the Yellow Bellflower, judging by the fruit. The bark of the young shoots also resembles the Yellow Bellflower, though the growth is unlike that tree. The fruit, Mr. Waters claims, keeps in good condition a month longer than the Yellow Bellflower. It is uniformly large and where exposed to the sun is of a bright scarlet color. The fruit was shown at the Chico Convention and referred to a committee, composed of John Rock, C. W. Reed and B. G. Stabler, who reported the apple of the Bellflower type, and recommended that it be examined further with the help of a larger number of specimens, to discover its comparative standing with that standard variety. We shall probably soon learn more of its value.

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Notes on Current Topics.

EDITORS PRESS:—To the good people of Contra Costa county who may believe, with the writer, that a neighbor, equally interested in the extermination of the squirrels, should not set a price upon his receipt for squirrel poison, I offer free the following:

One ounce of potassium, 2 drams.
Powdered strychnine, 1 dram.
Oil anise, 4 drops.
Oil peppermint, 2 drops.
Wheat, 1 quart.
Mix, let stand 24 hours, then spread on cloth to dry and dredge flour over the wheat.

The above is a "dead shot." One grain of wheat from this mixture will kill a squirrel, and in consequence but a few grains need be placed at a hole. The poison is effectually disguised and the wheat made appetizing by the anise and peppermint, but what is better, every one has the right "to use it without any charge other than the cost of the proportions."

Too much care cannot be exercised in the handling of the poison and in keeping the wheat in a safe place, as it is four times as deadly in its operation as the poisoned wheat sold by manufacturers.

Coyotes.

While on the subject of "varmints" I would say to Mr. Hoag of Booneville that the coyotes can be disposed of in several ways. Place an animal—that has died of some non-contagious disease—in the center of a large field, or at least a quarter of a mile from the brush or woods; let the coyotes work at it for several days, until they all learn its location and grow fearless, then chain up the dogs, sprinkle strychnine on the carcass and the following morning gather your coyotes. If the carcass is not too close to the woods or brush, Mr. Coyote will be found "toes up" within 100 yards of the bait.

If you have no bait, take lard. Place a tablespoonful on a flat stone that lies in the path they travel; with the spoon make a hollow in the lard, sprinkle in some strychnine, and then with the spoon cover the lard over the strychnine; don't touch the stone or lard with the fingers, or the coyote will be suspicious. If the bait is far enough away from the brush, you will find a dead coyote on the trail, as the lard dissolves immediately and the poison gets in its work at once.

Trapping Coyotes.

The coyote is as difficult to trap as a weasel, but he can be "taken in and done for" as follows: Drive two parallel rows of two-foot stakes about 18 inches apart, have the rows of stakes eight feet long; the tops of the stakes should be 18 inches from the ground; lay a piece of wood across the entrance at each end, have it, say three inches thick; now set a trap just inside of the entrance at each end and behind this crosspiece of wood, so that the coyote on entering will step over the wood and squarely on the trap. Tie a young kid in the center of the run, giving him no chance to work backward or forward. Cover the top of the trap over securely with brush. To make this trap doubly effective, place the trap and a pair of buck gloves in a sack of horse manure; when you are ready to set the traps, take out the gloves, put them on, and then set the traps, and cover with leaves, being careful not to touch the stick lying across the mouth of the run, the trap nor the leaves covering it, with the naked hands or your shoes.

On visiting your trap the following morning you will be surprised to find a coyote or wildcat fast in each trap, and the kid unmolested, though its safety can be made secure by driving stakes across the "run" to prevent the coyotes reaching it.

Calaveras Notes.

May Blossom Davis' letter in *RURAL* of Feb. 9, while good in description is faulty in facts. At some future time I will try and give a short sketch of Calaveras county, when the reader will see that there are several systems of irrigating ditches in the county and a visit to those sections will prove that there is a large area of land capable of being irrigated. If there are any "doubting Thomases" I would be pleased to show them lands suitable for fruit that can be irrigated and are for sale at less than one-fourth the price of the same character of land in adjoining counties. Please remember I have no land to sell.

Poultry.

I am more than pleased when the "chicken men" give their experiences in the *RURAL*. N. W. Geffroy of Lodi asks "Why is it the hens refuse to lay and the few chickens hatched out have not been strong enough to live?" I think the average "biddy" has given up the contest and the young chicks the "ghost" because they have found it worse than useless to compete with the Eastern chicks, raised in sections where feed is almost free and no more remunerative business than poultry-growing to be had. The Pennsylvania Grangers are working to have a bill passed to prevent dressed beef being shipped into the State. Our poultrymen will have to shut off this Eastern surplus before the hens will go to scratching and shell-ing out the eggs.

But to answer Mr. Geffroy seriously: chicks hatched late in the season are always weak. The past winter—if it can be safely called "past"—has been very mild, and in consequence, the "fowls laid all winter long" and are now "laid out," and the offspring of the hatches weak. Give your hens a hot breakfast of the following home-made poultry feed:

Cook potatoes, pumpkins, apples, onions, or any other vegetable, and when mashed fine add, while hot, to each five gallons:

Ground flaxseed, one quart.
Ground bone, one quart.
Cayenne pepper, one ounce.
Middlings, three quarts.

Mix and give a liberal feed. Place a little copperas in the drinking-water. Feed whole grain for supper. Clean out your poultry-house and give it a thorough whitewashing. My poultry have the run of the orchard during the winter, but are religiously excluded in summer. Chickens and gardens, like the hydraulic rammers and ranchers, won't work together for their mutual good.

To succeed with poultry requires, first, cheap feed; second, a good market; third, cleanliness and close attention to details. I prefer the Brown Leghorn and have the finest in the State. I also keep the Langshan (a good table fowl), Buff Cochins (no good), Minorcas (fine fowls that lay eggs the size of a duck's), Wyandottes (too tender), and a number of crosses, the best being that between the Langshan or Minorcas with the Leghorn.

Rattleweed.

This subject has been given considerable notice in the *RURAL* of late, and I wish to add my mite, though I should not do so if it were not for the disposition shown by some of your correspondents to dispute the effect of the weed when eaten by stock. In the winter of '79 I visited an English friend who owned a large ranch in Web Mountain valley, Colorado. He was the unfortunate owner of a large number of "locoed" horses, mules and cattle, and many were the exciting rides and drives we had with them, starting out with a strong sled and returning astride a single runner or riding "Crazy Jane" to Ulay and return on a "whoopla!" gait that was anything but desirable, especially as "Jane" refused to stop until she had completed the circuit. And the mules! how they would start in the woods, and making a bee-line for home drag the wagon over every obstacle until an unsurmountable one was struck, when the traces would have to give way. Their stupid, staring look, shriveled flesh (like that of a horse after crossing a desert), and then their wild and desperate charges over and through any and everything.

Having taken up the study of veterinary surgery, when engaged in the drug business, I was naturally interested in this, to me, new disease. I found upon investigation that the disease found the most victims when feed was short; that "once locoed always locoed;" that stock first eat it from necessity and not from choice; that the habit once formed, the animal—like the opium-eater—seeks the poison. The disease affects the brain, in many instances causing it to almost dry up.

There is no known remedy. Prevention consists in good feeding. Fields where the grass is mowed off short, and a large amount of stock then turned on to "root hog or die," produce the most cases, as the loco weed, growing along the fences, proves too tempting to the half-starved stock. I would like some of the skeptics to feed loco to some worthless horse and observe the effect, but be sure the horse eats the loco, as he will not do so unless compelled by starvation. E. H. SCHAEFFLE.

Murphy, Cal.

About Hollister.

EDITORS PRESS:—Hollister and vicinity has been visited by quite a nice little rain, which, although a little colder than was pleasant, has done a deal of good. Growing grain has taken a new impetus, and with the usual spring showers, bids fair for good crops.

The near foothills, as well as the mountain ranges, are covered with a dazzling coat of snow, which, although it presents a lovely sight, must be hard upon the stock pasturing there, as it probably will not melt for several days, and owing to the feed having been short for some time, the cattle are in poor condition to stand cold weather and live upon brush and expectation until the snow melts off the grass.

Farmers who have been borrowing trouble on account of the lack of rain for a few weeks would have had more peace of mind had they heeded the old saying, "Don't trouble trouble till trouble troubles you," as they now seem to have forgotten their scare, and greet one another with a cheerful smile and "How do you like the rain?"

Hollister has been working the tramps who loiter around town, nearly all the work done upon the courthouse grounds lately having been done by them. Several bands of tramps which were on the way to this town, upon hearing the fate of their fellow-footpads have given it a wide berth.

Quite a number of umbrella trees have been planted on the courthouse grounds, and promise to afford grateful shade in coming summers. Farmers fear lest the cold weather has blighted the almond crop, as the trees have been blooming for several weeks. A. F. Hollister, Feb. 17, 1889.

The Thirsty Cypress.

EDITORS PRESS:—We have always thought the cypress well adapted as an ornamental tree for the adorning of garden and lawns, as it does not make the litter which trees that shed their leaves during autumn and winter do, but always presents a pleasing appearance with its dark-green foliage at the time most trees look naked and scraggy.

Observation has taught us that, though the tree itself is attractive, the flowers and small shrubs which have been planted near it, after the first year of being placed there, do not thrive, but seem to dwindle away until finally they die out altogether.

Curiosity induced us to dig up the dead and dying roots of the flowers to see if we could solve the problem of their unthriftiness. Upon digging down in the earth a little ways to loosen the roots which penetrated deep, we found them to be completely surrounded and interlaced by innumerable tiny white roots of the cypress tree, which entirely encompassed them, thus preventing them from spreading and absorbing the moisture, completely choking them out.

When the roots yet living were transplanted to other soil, and away from the trees, they commenced to thrive, and are now doing well. Hollister, Cal. A. F. S.

THE FIELD.

Wheat-Growing in Sutter and Yuba Counties.

The history of wheat-growing in Yuba and Sutter counties is an interesting study. It covers an era of time when the greatest progress in wheat culture took place that the world has ever seen, until it seems scarcely possible that further advances can be made in this age of possibilities. It was introduced here before the discovery of gold, but so little was it understood as applied to our soil and climate that even the fabulous prices of breadstuffs in the first years of California gold mining failed to advance it to a paying industry.

The first cultivation of the soil began with a forked stick—that is, a small tree was cut below a suitable fork; one of the prongs was left sufficiently long to answer the purposes of the "beam," the other prong being short, for the "plow," and on the latter were nailed plates of iron or steel to make it wear longer. The butt end was dressed down and "handled," and this constituted the plow—if not of our forefathers it did of the argonauts.

The harrow was another forked stick, the prongs being of equal length, with wooden pins for teeth, the prongs spreading so as to form what is known as an A harrow. The team was a mustang, and the "harness" frequently consisted of a lariat fastened to the horn of a saddle, the pony being ridden—doubtless to "hold him down to his work." It is needless to say that such cultivation was confined to mellow, alluvial soil and to very small patches.

American occupation soon changed all this, and brought with it the cast iron plow of the East, and, later, the steel plow of the West. The genuine A harrow was also introduced, with timbers six inches square and iron teeth from 1 to 1½ inches thick. These improved tools, though crude, were sufficient to reveal a wealth of soil that was as surprising as the discovery of gold at Sutter's mill. The sickle was the first harvester used, then the scythe, then afterward the cradle, then the reaper followed with an army of binders. These again were succeeded by the header, a machine that astonished the world with its speed and adaptability. The first thrashing was done by drawing the grain into a circular pen, or yard, and driving a band of mustangs over it. The rainless harvest months gave ample time to do these things out of doors. The grain was winnowed by throwing it up in the air when the wind was blowing, which carried off the chaff, leaving the heavier grain clean upon the ground. Nothing more primitive than California husbandry was ever seen in the world's history, and yet no spot on earth offered such perfect opportunities for advanced agriculture as the soil and climate of California.

To follow the various steps of progress is not the purpose of this article, neither would space permit. What has been said is intended more to aid in pointing out the distinction between the present and the past. The gang-plow is a California invention and one among the first was invented and made in Marysville by A. Ellison. The best harrows ever used are the product of California shops, and from the laborious hand-sowing we have a machine that sows more perfectly 100 acres per day. All these improvements are now commonplace affairs, and when we thought the chariot of progress blocked, there comes a machine in harvesting that discounts the most progressive methods, so far as to break the power of comparison. A machine that cuts, thrashes, cleans, and sacks 40 acres a day of wheat or barley which yield 40 bushels per acre, and does it with only four men and 20 animals in a more perfect manner, in all departments, than was ever done by any former implement, is something so marvelous as to stagger comprehension. We can only exclaim: "What a grand privilege to have lived in this progressive era!"

This history of these two counties is also the history of the State; and they—through their aggressive and enterprising citizens—have ever kept in the front rank.

The earliest and best wheat was grown in these counties many years before the plains of Butte, Colusa, Yolo, or the San Joaquin valley were brought under cultivation. It brought the highest price in the milling market, and maintained a distinctive and superior reputation to the ends of the consuming world. It has since lost none of its early excellence, but its distinctive character has been somewhat merged with the general progress. Some of the earliest varieties of wheat grown here were the Australian, Chili, Sonora, and Red and White Club. Then followed the celebrated "Proper," than which no finer milling wheat was ever made into flour. This wheat originated in Sutter county under the careful nursing of the late Edward Proper. Then came the Pride of Butte, the handsomest and whitest wheat in existence, and a good yielder and very popular, but hardly equal to the Proper in intrinsic merit. The Pride of Butte originated in Butte county, our neighbor on the north, but there are those who believe the identical wheat made its appearance in Sutter county simultaneously with that in Butte—the work of A. H. Holland, one of our most successful farmers. In both instances the "plant" was found as a sport in other varieties of wheat—at least such is the case in Sutter. Other varieties have appeared, such as the Toozell and the Hardy, both excellent kinds and raised into prominence by Joseph Hardy, one of Sutter's most careful and painstaking agriculturists, from seeds received from the Agricultural Department at Washington.

The original Chili and Australia wheat disappeared almost entirely through degeneration and admixture, but during the past three or four years they have again appeared through importation in their original purity and quality, though possibly slightly changed from their early appearance.

One variety of wheat deserves more than a passing notice. It is the White Club (known by that name), also called Chili Club. The Salt Lake Club is very similar and many think they are all of one kind, blended together by cultivation in one district, whatever their condition may have been in other States or climates. This wheat is very popular with shippers; is good milling, but hardly equal to Proper, Australia, or Chili. It bears more hardships while growing, and after ripening will stand longer before harvesting than any other variety. It is good wheat to stand erect; has never been shelled seriously by the heaviest winds, and is therefore very popular with our farmers. The Red Club grows exactly like the White Club; in quality resembles the Sonora; both chaff and berry are a reddish hue; was not popular and rarely seen after the '50's.

As already stated, the mode of culture has vastly improved in these two counties, and with it the early fertility has not only been maintained but greatly improved. Fields that have been under cultivation for 25 or 30 years, or since the advent of the American farmer, are to-day as fresh and productive as in the beginning. No exhausted fields are heard of on the farms of Gen. Bidwell, Judge Pratt and others in Butte, or on Hook Farm, once the home of Gen. Sutter, and other old farms in Sutter county, or any of the older farms in Yuba, and on none of these has any manure or fertilizer ever been used, for the simple reason that the farms were too large to admit of it.

These great wheat plains being level, do not wash and send their fertility to the ocean. On the contrary, being level, they catch and retain washings from the mountains which surround them. The soil being warm and dry, and barnyard manure very heating, is said to be injurious to grain—at least such is the writer's experience, having found the best fertilized spots of wheat burned to death by an April hot wave.

Laying the land over in fallow is the best method of improving the soil and gaining the best results. The enormous crops of wheat last year (from 25 to 50 bushels to the acre) were grown on summer-fallowed land. This treatment is not a California discovery, but, like many other methods in agriculture, has been brought to a much higher state of perfection in our climate and by the hands of our progressive farmers. The first knowledge we have of its adoption in this State was by the late Samuel D. Denville of Yuba county, in 1858, on one of his farms on the Honcut, on what was considered worthless upland—red, gravelly and very dry. The result was marvelous, giving a yield of from 30 to 40 bushels to the acre. From this venture the practice spread to Sutter and other counties until it has become quite general throughout the State. But even this method has been largely improved upon here, and with great success. The great secret is to plow the soil when in good "plowable condition"—neither too wet nor too dry. The finer the surface the better the fallow, and the better the succeeding crop. If a single plowing will do this, all well; if stirring or reploting is required, it will pay. A growth of grass or weeds on the fallow is an injury and should be suppressed. The kind of tool with which to exterminate it is immaterial. First, deep plowing, then stirring shallow, is good; or first shallow and then deep, is also good; both methods are extensively practiced by our best farmers. Rough ground endures excessive wet weather best, and well-pulverized soil stands excessive dry weather best, or at least the crops do.—Sutter County Farmer.

The Contra Costa Squirrel Committee's Report.

The *Martinez Gazette* publishes the following report, which will be presented at the next meeting of the farmers to consult upon the best means of destroying squirrels:

The committee appointed at the squirrel meeting of Feb. 4th, for the purpose of suggesting means for destroying squirrels, submit the following report:

During the months of October and November we recommend the use of phosphorus as the cheapest and most effective method of killing squirrels, as at this time they will eat it best. Care should be taken not to put it out where there is any dry vegetation, or where stock can get at it, as it does not lose its strength by exposure. Scatter the poison well when putting out. There is usually a time in the fall of the year when the north wind blows. This is the best time in the year for killing squirrels, and we believe phosphorus the best poison to use at this time. Use about a pound of phosphorus to 75 pounds of wheat. We think the following the safest and, on the whole, the best method of preparing the poisoned wheat:

Have made a sheet-iron cylinder 2½ feet long by 18 inches in diameter, with a light iron shaft through the middle and a crank attached to one end. On the surface of the cylinder 18 inches from either end have a raised opening five inches in diameter. In this opening insert an air-tight plug. Fill this cylinder about half full of clean wheat. Pour in about a bucket full of boiling hot water. Insert the plug, turn the cylinder from five to ten minutes. Draw the plug, place a sack over the opening to keep the wheat from coming out, and drain the water out. Put in from six to eight sticks of phosphorus, distributed along the wheat, put on the lid and turn slowly for about 20 or 30 minutes. It is better to allow the poisoned wheat to remain a day or so in the cylinder before putting out. An ordinary syrup keg with a shaft and crank attached may answer the purpose of the sheet-iron cylinder.

During the months of December, January and February we recommend the use of phosphorus, strychnine and carbon bisulphide. All of the following receipts for mixing strychnine we have found to be good:

1. Seven quarts wheat washed clean. Let remain in water ten minutes, then drain dry as possible. Put one ounce strychnine in a teacup and grind it fine as flour. Put in enough water to dissolve. Stir this five minutes. Fill cup half full of water. Stir in brown sugar until it forms a syrup as thick as molasses, which will make a common teacup full. Add ten drops oil of anise and ten drops oil of rhodium previously mixed; stir well. Pour this over the wheat. Rinse the cup with a little water and throw it on the wheat. Stir vigorously until every kernel of wheat is coated with the syrup.

2. Stir one ounce powdered strychnine on one gallon clean dry wheat. Add the white of four eggs, stir thoroughly, add about one teacupful of powdered sugar.

3. Put one-half ounce pulverized strychnine in a teacup. Add one tablespoon full of sugar, pour in warm water until cup is about two-thirds full, stir until the mixture is thoroughly dissolved. Pour this on four pints of clean dry wheat and stir until the water is all taken up by the wheat.

4. Take five quarts clean wheat, scald with water, drain. Take two-thirds cup of white sugar, dissolve with sufficient water to make a syrup, add one ounce strychnine, stir thoroughly until a thin paste is formed. Pour this on the damp wheat. Stir thoroughly for at least 15 minutes. Add one pint powdered sugar, stir, add 5 to 10 drops oil of rhodium and 5 to 10 drops oil of anise.

The proper time for putting out strychnined wheat is late in the evening and early in the morning. It is of little use to put it out in the middle of the day. Rainy weather is not a good time. Crystallized strychnine may be pulverized in a common coffee-cup with a round-headed bolt. In mixing poison, the more one stirs it the better. In putting it out, put 20 kernels in a dry, smooth place near the hole. Scatter a little. Where barley has been sown, poison barley instead of wheat. If squirrels will not eat one kind of poison, they may another. In poisoning where the wheat growing in the field is soft, soften the poisoned wheat and squirrels will eat it much better. In any of the above receipts for strychnined wheat it may be well to add oil of rhodium, oil of anise or oil of cummin. If the oil of cummin is used, do not put it on the wheat until you are ready to put it out.

In March and April, when squirrels will not eat poisoned grain, we recommend the use of smokers and carbon bisulphide. Neither can be used to advantage when the ground is dry and porous. When the ground is wet we believe the use of carbon bisulphide to be the most effectual method of getting rid of squirrels. It may be put in the holes in any of the following ways: Take an ordinary quart fruit jar, fill it with small dry oak balls or cotton balls made the size of a walnut, fill this with bisulphide and allow it to stand for a short time. Put one ball in each hole (the further in the better) and cover the hole well with dirt. It is recommended by some to saturate lumps of dry horse manure with the bisulphide and put them in the holes. The liquid may also be poured in

the hole by means of a funnel-shaped tube. Care should be taken to tramp the ground over the hole. To succeed with this or any poison, one must be persistent and follow it up.

H. M. GREGORY, Sec'y.

HORTICULTURE.

The Future in Fruit—No. 2.

EDITORS PRESS:—I find the following statistics in the San Francisco papers:

EASTERN SHIPMENT OF FRUITS IN POUNDS.

	Fresh Fruit.	Dried Fruit.	Raisins.
1886.....	49,542,029	5,076,630	12,697,830
1887.....	50,749,950	15,865,680	15,484,550
1888.....	51,593,920	19,929,600	13,954,990

The facts herewith presented are sufficient to show the remarkable extent of the fruit industry in this State. Whether much further progress will be made as regards the green-fruit trade will naturally depend on the demand made upon it by the Eastern markets. The same also applies to the dried fruits, and in a measure to canned goods.

From the above statistics we learn there has been no very marked increase during the last three years in the shipments of green fruits. From the report of the secretary of the California Fruit Union, we learn the net returns of Eastern shipments to the fruit-growers of the State averaged \$1.95 per 100 pounds. That seems very good, provided the fruit-grower got enough out of the inferior fruit, kept at home to pay the expense of manipulating and marketing the same.

But another question on the shipment of green fruit East is: How much of our green fruits can be profitably disposed of in the Eastern markets? Of course there must be a limit to the quantity which can be so disposed of. That limit is yet to be found, and that, too, within the next year or so.

The above-quoted statistics show a very marked increase of the shipments of dried fruit last year over that of the previous year. Such was the speculative demand for dried fruits in the autumn of 1887, that all save what was retained at home for domestic use was shipped to Eastern markets. Such was the quantity shipped that the Eastern fruit market became stagnant, and much of this dried fruit had to be carried over to last year. Last year's shipments exceed that of 1887 by upward of four millions of pounds. This large amount was dumped on a market already fully supplied by Eastern domestic dried fruits, and that portion of the California dried fruit of 1887 carried forward to the succeeding year. But this is not all. The dried-fruit men got rid of all their dried-fruit crop at a profit in 1887. But now they are carrying a fifth or a sixth of the dried-fruit crop of 1888 here at home, and for which there is absolutely no market, and this, too, when is still ringing in our ears the cry: "We have the world for a market; we cannot grow too much fruit." For ten years this "Shibboleth" has been sounded in every hill and valley and in every city and hamlet in California, till at last the popular mind accepted it as an incontrovertible fact. Both propositions are false in theory and in fact.

At best the fruit-grower of California can only share the markets of the world with the fruit-growers who engage in the business near those markets. Send the product of his orchard to what market he may, he will be met by domestic orchardists in the same market. If to New York, Chicago or St. Louis, he finds the domestic orchardist there before him. If to London, Paris, or other European markets, he is met by the domestic producer at all those points. If to Australia or the Pacific islands, there he finds the domestic producer to contend with for supremacy in the markets. To take and hold the markets he must sell cheaper or offer a superior article at about the same price of the domestic article. He may perchance have something new to the market in which he offers his goods—something not produced by the domestic fruit-grower. If so, he must offer his goods at such a price as will induce the consumers to purchase them instead of purchasing the accustomed article. In every market of the world he is met and comes in competition with the products of cheap labor, and in most of the markets with the products of cheap lands. How, then, can it truthfully be said that the California fruit-grower has the markets of the world at his command?

Then again it has been proclaimed from every hilltop, we cannot grow too much fruit, if we grow only good fruit. This is sheer bosh and nonsense. There is scarcely a limit to the power of fruit production in the soil and climate of California. The extent of her fruit lands is so immense that she could of herself supply and meet all the demands of commerce for fruit.

Yet so firmly fixed in the popular mind is this "Shibboleth" of a world's market and limitless demand for California-grown fruit, that this year there will be not less than 2,500,000 fruit trees set in orchards from California nurseries and 1,500,000 from nurseries in Oregon and Washington Territory. This, too, is in addition to the regular annual planting which has for years been going on. When all these young orchards come into bearing, take some enthusiast on the fruit question, point out

the market where these products may be profitably placed, supposing the requisite help may be at command to manipulate the same.

Some who may read these articles in the "future" may put me down as a pessimist, a croaker, and an old foggy, and all that, but they may as well dismiss me from their minds and address themselves to the facts I have pointed out and the deducible consequences therefrom, and prepare in time to bear up against the reaction in the fruit industry, which is sure to come in the near future.

This thing of planting orchards is not local. Increased acreage is yearly being put to orchards all over the United States, Australia, New Zealand and Tasmania, and even the farmers of Old England have within the last five years gone largely into fruit-growing. So that those enthusiasts in California who have invested largely in the planting of orchards may well take heed as to what may be the final output of their ventures.

Haywards.

W. C. BLACKWOOD.

[As we remarked at the close of the previous article by Judge Blackwood, it is well enough to look upon all sides of questions, and, therefore, his position is worthy of contemplation, but we have no idea that there will be a serious overproduction of fruit, though there may be, of course, depressions. We have heard so much of overproduction, which was anticipated but never realized, that we do not fear it. The saving clause is that demand increases with increased supplies of desirable articles, and it often increases beyond the expectations even of the most sanguine. We anticipate that this will be the case with the fruit product.—EDS. PRESS.]

Drying Peaches Again.

EDITORS PRESS:—In relation to the inquiry of "Tenderfoot" about the best method of making good dried peaches, I will give my plan.

One of the most important things in the process is to have good fruit, neither too ripe nor too green, and hard.

In the second place, good trays, such as they dry raisins on, are almost indispensable. You handle them easily; they are more convenient than cloth or plank because you can carry them from the room where the fruit is prepared and placed on the trays to the sulphur bath.

Care must be taken to place the sulphur pan far enough below the trays to prevent burning.

To make a scaffold to place your trays on, set stakes in the ground about two feet high, nail fencing boards at the top in rows two feet apart. The trays should face to the southwest so as to get the full benefit of the afternoon sun.

Sawed redwood shakes make very good trays. They should be nailed with wrought nails to a rim of one-inch square lumber.

Have a room to handle and store your fruit as it is dried. Make it moth-proof, with tight walls and screens over the doors and windows.

The doors and windows should be closed at night and open every day to facilitate drying.

To make bright, clean, merchantable fruit, have all your trays of an even size. Pile them up every night to keep out the dampness and the moths; uncover them in the morning after sunrise.

Do not let your fruit get too dry on the trays, but examine it critically, for when some are perfectly dry other pieces will be partly dry. Carry the fruit into the storeroom and bulk it, turning it over every two days to equalize the dampness, and whenever it is dry enough to keep, sack it at once and keep it bright and clean.

MONTGOMERY PIKE.

Santa Maria

The Early Harvest Blackberry.

EDITORS PRESS:—By this day's mail I send you specimens of the new "Early Harvest Blackberry," cut at random from my patch of imported vines, in all stages of growth—bursting bloom buds, perfect blossoms, bunches of green berries and clusters of the almost ripe fruit—which, for the 30th of January, I claim to be a showing that will not only make our Eastern visitors open their eyes, but also "astonish the natives," hard as that is to do among us old Californians.

This is the third year that I have fruited the truly "Early Harvest Blackberry," and I find, extravagant as were the claims of its originator for it, that it maintains them all in California.

It truly "is so early, bears so well, eats so well, ships so well and sells so well, that it is of very notable value for a large portion of the United States." Yet in California it finds just the climate to perfect all its peculiar points to the highest degree, since there are no winters cold enough to really stop its growth, and it leaps into the arena with the new year, it almost seems, with fruit all set and ready, to begin its work.

Its beautiful pink-tinted blossoms mark it as a distinct order of blackberries, and the beauty of the rows in full bloom is a thing to be seen, not described.

L. U. McCANN.

Santa Cruz.

THE APIARY.

Inspection for Foul Brood.

"The bee and honey industry of San Diego county is badly in need of a backbone," said Bee Inspector Segars of San Bernardino county, just before starting on his return north to-day. "So far as I have learned you have no bee inspector, prices are not maintained, and the contagious disease of 'foul brood' is affecting the hives. I suppose that it is the fault of the apiculturists themselves that they are without an inspector. We had none in San Bernardino county until last year, when the bee men found it to their interest to petition the Supervisors for one, and they put me in. I should not be surprised if a good many now engaged in the industry were ignorant of the fact that a law was approved in March, 1883, which reads: 'An Act to authorize the Boards of Supervisors of the several counties of this State to appoint inspectors of apiaries and provide for their compensation and defining their duties, and for the further protection of bee culture.'

"This Act further authorizes the Supervisors to appoint one or more inspectors of apiaries, who shall fix the compensation, which is to be paid from county funds not otherwise appropriated. Section 3 directs that upon complaint being made to the Inspector that 'foul brood' exists anywhere in the county, it shall be that official's duty to inspect the apiary and have the hives which are affected, with the comb and bees, either burned or buried that following night. Any person who may discover the disease is also authorized to destroy the apiary as directed, otherwise he will be deemed guilty of a misdemeanor and is liable to a fine of from \$5 to \$25 for the first offense, and not over \$50 for the second.

"Now, while I have been admiring your city and arousing myself to a full realization of the great future to which it is inevitably destined, I have also been looking into the matter of the honey product and shipping. I find that the contagion of 'foul brood,' which is a disease of the larvæ, prevails in the northern and eastern portions of the county. I heard complaints of this before I came down, and if the disease is not arrested it will eventually paralyze the industry throughout the county. I do not mean to say that your honey does not grade as well as that of Los Angeles or San Bernardino, but I do know that you are not receiving as good prices for the product. One instance I recall, in proof of this, is the statement of Mr. Root of Medina, Ohio, in his *Bee Gleanings*. He traveled through the county last December, while on a visit to relatives in San Diego, and he reports that bees in good condition were offered him for \$1.25 a hive. I recollect that in 1881 honey could be bought here for three-fourths the price that ruled in the other two counties. We receive \$4 a hive in San Bernardino.

"I would like to advise the San Diego county bee men, through the *Sun*, to look after their own interests better. They ought to petition the Supervisors for a bee inspector, as they would then be more secure in their property. I am paid \$3 a day and mileage, but think the rate will be raised to \$5, as the duties are onerous.

"The apiculturists of our county received a surprise when I set to work. Of the 7000 hives there I have inspected 4000, and I found 719 different diseases afflicting the bees, 'foul brood' being the most prevalent. One lady who owns 100 hives welcomed me cordially. Her bees, she declared, were in perfect condition and she was prepared to receive a certificate of health. I discovered that just 99 of her hives were diseased.

"Professor Cooke of Lansing, the expert, says of 'foul brood' that there may be 1,000,000 disease germs in a single cell, any one of which if carried on the foot of the bee to an adjoining apiary may infect the whole stock. Queen bees brought from the coast often carry the contagion with them. The worst county in Southern California for the contagion is Los Angeles, where if there is an inspector I have never heard of him. I find it hard to work alone. If your county and Los Angeles would appoint inspectors and the bee men would organize in some way to maintain a standard rate, there would be more money and less loss in the business, and the contagion that is now getting such headway would be stamped out."

Mr. Segars has been an apiarist for 13 or 14 years, and his ranch in the Fairview district, seven miles north of San Bernardino, in the foothill belt, is one of the best conducted in the State.—*San Diego Sun*.

The Best Hive.

EDITORS PRESS:—Will some beeman kindly inform a number of inquirers here in Southern Humboldt which is the best hive for our use? We desire to keep a few stands for home use. Is the best hive patented? If so, can we obtain right and working plans to make our own hives? Our distance from any source of supplies and lack of transportation facilities would make freight on hives more than first cost. Also other apiary supplies and such directions for beginners as any of the PRESS correspondents may be pleased to give, all of which will be gratefully appreciated.

O. L. PRELPS.

Blocksburg, Cal., Feb. 20, 1889.

PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

Greater Inducements for Subscriptions.

NEW RATES for PACIFIC RURAL PRESS.

Annual Subscription	\$3.00
If paid in advance, 12 months for	3.00
If paid in advance, 6 months for	2.00
If paid in advance, 3 months for	1.00
Trials subscriptions for three months, paid in advance, 60 cents.	

Official Endorsement.

In consideration of a certain contract entered into this day between Dewey & Company, publishers, and the California Patron Publishing Company of San Francisco for the publication of a weekly Grange edition of the PACIFIC RURAL PRESS, and the California Patron as a monthly,
Resolved, That the Executive Committee of the State Grange of California hereby designate and endorse the PACIFIC RURAL PRESS as the weekly organ and the California Patron as the monthly organ of the State Grange of California.

Officers' Mid-Year Meeting.

Pursuant to a resolution of Brother Webster at the first State Deputies' Grange meeting ever held (so far as we are informed), there will be held early in April a second meeting of District Deputy Lecturers, State Officers and visiting Patrons of State and subordinate Granges, at the office of the Secretary in this city. The success of the first meeting called by Worthy Master Overhiser last April was such as to warrant the expectation of a larger and still better gathering this year. It comes midway between the annual meetings of the State Grange and in good time to lay out and adopt plans for the spring and summer field work of the Order.

Some time since the Masters of Subordinate Granges were requested to confer with each other and recommend Patrons for appointment as Deputies for the ensuing year by the Worthy Master. We judge there is little desire for changes in the present Deputies, as no recommendations, we believe, have so far been received. Where Deputies have served well during the past year it is no doubt a good Grange principle to let well enough alone. Six months having elapsed since the State Grange met, we should be pleased to receive reports of the progress on the part of Deputies, in hopes that it may liven up interest in the Order in some places that have not been lately heard from.

At the request of the Worthy Master, we thus again call attention to the request that Masters should take action and recommend the appointment or reappointment of Deputies in their various districts. He desires that names for appointment should be received by the tenth of March, if possible, otherwise at the next earliest moment in order that they may be duly notified of the April meeting.

New Ritual Offerings.

Tulare Grange seems to be No. 1 in procuring the Worthy Master's new ritual premium. Merced Grange as far as heard from is No. 2. Now the Worthy Secretary, on behalf of himself and other Patrons, feels authorized to support the Worthy Master's proposition by promising a set of the new rituals and an officer or a visiting member of the State Grange to assist when needed in conferring the Third and Fourth Degrees under the new ritual to all Granges that will get up a class of 10 for instruction before the Deputies' Meeting, which will occur in the early part of April.

Now, who will be Nos. 3, 4, 5, etc.? Let us hear soon from all sections. Let every Grange try for the 10 members. Aim to make the class double that number. If any try and fail, just let us know and due credit shall be given for their efforts, whatever they may be. Strike at once. Commence work and work with a will and for success.

Interstate Commerce Report.

For a copy of the second annual report of the Interstate Commerce Commission to the Secretary of the Interior, the State Grange is indebted to the courtesy of Commissioner Aug. Schoonmaker of New York.

Besides the report proper, the volume includes a copy of the Act "to regulate commerce," whereby the Commission was created and its functions defined, a resume of Canadian and English legislation concerning traffic on railways and canals, decisions by the Commission, rules of practice, statistics, tables, etc., which with the extensive indexes swell the work to 354 pages.

Suggestions by S. T. Coulter.

Bro. Past Master Coulter, who was personally acquainted with Bro. Darden, has kindly written on this subject, at our request, as follows:

By reference to the Proceedings of the Eighteenth Annual Session of the State Grange of Mississippi, it will be observed that the subject of the erection of a monument to the memory of the late Hon. Pat Darden was considered and determined upon and an opportunity offered to the several State and subordinate Granges to participate in the work. Bro. Darden was for several years Worthy Master of the State Grange of Mississippi and a member and officer of the National Grange.

In the National Grange, by the courtesy and kindness and the zeal and industry by which he was everywhere and at all times distinguished, he won the esteem, confidence and affection of all he met.

At the annual session of the National Grange held in Lansing, Michigan, in 1886, he was chosen as the executive head of the Order. By a decree higher than any mortal power, and to which all must humbly bow, he has been removed from the labors and duties of life, and we that are left to mourn his loss are to have the melancholy pleasure of an opportunity of participating in the erection of a memorial of his virtues.

I suggest that the W. M. of Cal. State Grange send a circular letter to the Granges calling their attention to the subject and giving direction how such contributions as they may make shall be brought together and be forwarded.

It may be esteemed an assumption on my part to make any intimation as to the amount to be contributed, but I will venture to say that, as most of the Granges under the jurisdiction of the National Grange, and many individual members of the Order, will most likely desire to participate in the work, and as any considerable pomp and grandeur would be inappropriate in a monument to the memory of one so distinguished for his personal humility, perhaps from three to five dollars from a subordinate Grange would raise an amount sufficient for the work in hand.

We understand from Worthy Master Overhiser that this will be one of the matters considered at the coming meeting of the Deputies. In the meantime we would suggest that both Granges and individuals who feel like contributing can do so through the Treasurer of the State Grange, care of the Grangers' Bank, San Francisco.

Good Effects Evident.

Following the course of Worthy Master Carr's visitation the fore part of February, we have to report a class on the way to the Master's office at Tulare of 20. At Merced there is a strong prospect of a class of 10 more. At Stockton we expect a much larger class, quite a number of petitioners having already signed. Surely Sacramento will not be behind her sister Granges that received the benefit of Bro. Carr's visitation. San Jose is announced to be good for a class of 10 or 20. Elliott Grange, we believe, has 10 or more; and we hear from Woodbridge Grange about the same. Temescal Grange has also lately elected two applicants.

Surely Bro. Carr and his friends should feel gratified at the success of his generous work in a sister State. The more fraternal visitations we have between subordinate Granges and different States the better for us all. We shall not die regretting having visited and assisted our fraternal neighbors too much or too often.

New Granges.

We have word from Brothers Webster and Logan that a new Grange with 20 or more members is to be organized at San Miguel, San Luis Obispo county, Friday, March 1st, and that Paso Robles Grange in the same county will be reorganized, good and strong, on the following day. There are confident hopes that several other Granges will be reorganized in good shape very soon in San Luis Obispo county.

San Miguel and San Lucas, newly organized, and Salinas, Gilroy, Hollister and Paso Robles, reorganized, will give us six Granges put in operation anew in about 30 days, and so the tide pours southward. Who will start the ball rolling in the North? There ought to be flourishing Granges at Chico, Oroville and Colusa, as well as quite a number of other places in Butte, Colusa and Shasta counties.

More About Picnics.

The time will soon be at hand for Patrons to arrange plans for holding their annual picnics. We hope the young (as well as the old) members of no subordinate Grange will be denied the pleasure of one or more day's enjoyment of such fraternal meetings in the open air of our glorious Pacific climate. We hope the wise men and women of our Order will also plan for district (and, if possible, State and interstate) picnic gatherings.

The Wright Law Again.

EDITORS PRESS:—I notice in your issue of February 16th a communication from T. N. on the Wright Irrigation law which represents the views of the majority of the farmers in the Modesto Irrigation district, and as your valuable paper seems willing to give the farmer a hearing, I venture to add something on the subject. All that T. N. writes is true and to the point. The law is not only "lame," but it is an expensive scheme, railroaded through the Legislature by lawyers and speculators, in order to boom the towns at the expense of the farming community. The law is framed according to their own ideas, and for their own benefit, without regard to the wants and needs of the farmers.

The majority of the farmers want irrigation, but not under the Wright law.

Our papers have purposely suppressed the true facts, and have sent out to the State the impression that the farmers are unanimous in their desire to put this law into operation.

The instigators of this movement know better; they know there is a strong current of feeling and open opposition to it in the Modesto district. The farmers have already had a foretaste of the benefits to be derived (by some one else) from this system, and their eyes are being opened more and more to the evil effects that this man's forces upon them.

The Daily Evening News makes the statement that the cost to the Modesto Irrigation District amounted to \$676,300 for the year 1888; but the editor modestly refrained from adding that nearly double that amount was levied for the same year, and the farmers have been forced to pay the greater portion of it.

It would be well for farmers to think well where the money is to come from to meet the enormous expense of irrigation under the Wright Law.

Modesto, Feb. 22, 1889.

[We give the above communication for the reason that if there are two sides as to the farmers' interests in the Wright Irrigation Bill, it is time the public knew it. We are not surprised that there should be some opposition to it. It is hardly possible to form a law which suits everybody. For months we have been urging Granges and farmers to meet and discuss irrigation matters. We hope that every Grange located in sections requiring irrigation will put this question foremost and discuss it and report their proceedings, that we can plainly see how a majority of actual land-owners are really interested in this law, both for the present and future.—EDS. PRESS]

EDITORS PRESS:—I notice that the Wright law is criticised in the RURAL of February 16th by an irrigator of the southern part of the State. I am no writer and not competent to discuss the irrigation question, but I do think that a law so crude, defective and unjust ought to be criticised more than it is through the press of the State. A petition was sent from the Modesto Irrigation District to the Legislature to have the Wright law repealed, which petition was signed by over 100 land-owners, among them one director and one ex-director, and had over 50,000 acres represented notwithstanding there was only two days' time to get their signatures in. There is no doubt that out of the district, comprising about 108,000 acres, from 70,000 to 80,000 acres do not want water under the Wright law. It is said that the banks will not loan money on mortgages, as they do not consider it a safe investment, for the reason that if the bonds are sold the land is given as security, and is hidden over all other mortgages.

SUBSCRIBER.

Meeting at Tulare.

Dear Sir and Brother:—Yours of the 22d at hand. In answer I will say the 2d day of March is the time we have decided upon to confer the Third and Fourth Degrees, and would be pleased to have you and Bro. Flint here with us. We conferred the First and Second Degrees so you and Bro. F. would not be overtaxed on that day. Sister Smith from Oakland was with us Saturday. Perhaps she may see you before you come down here. Oh, it is giving us some rain that we need. Fraternal yours,

D. O. HARELSON, Sec.

In response to the above call, the Worthy Lecturer and Secretary of the State Grange will endeavor to be on hand in good season. We are not afraid to go anywhere with Brother Flint as "spokesman in general" and "first-class traveling companion."

We hope to be able to spend nearly a week in Tulare and Kern counties, greeting old and new friends and enjoying the beautiful climate and charming views to be taken in at this season of the year. Also in some way to be useful to the cause during our visit, but shall depend on the Worthy Lecturer to draw the crowd and entertain them.

We trust a large number of Patrons will come forward from Lucerne Grange, as well as many sojourning Patrons, to see and listen to our able and good-looking Lecturer.

Proposed Legislative Reforms.

Of Immediate Importance.

The following communication has been received and is hereby referred to the immediate action of each subordinate Grange in the State for discussion and action thereon. Each Secretary receiving a copy is requested to present the same at the first meeting of their Grange, without further communication. In fact every Patron reading these views is requested to consider them in his own mind, talk about them with others, and be present at the Grange and discuss them. And further, see that they are presented in time for a fair consideration at the State Grange.

W. L. OVERHISER, Master of State Grange of Cal.

A. T. DEWEY, Sec'y State Grange.

SAN JOSE, CAL., Feb. 19, 1889.

A. T. Dewey, Secretary Cal. State Grange:—DEAR SIR: At the meeting of San Jose Grange on Saturday, February 16th, there was an unanimous opinion expressed that some movement should be made to convey in some effective manner to our legislators the ideas of Grangers throughout the State.

We have been appointed a committee to transmit our views to you, and to suggest that a communication be prepared and sent to the various Granges embodying the same or similar principles that you may think appropriate, for consideration and approval or other action.

Our ideas are these:
New Laws Proposed in the California Legislature.

1. That the movement to abolish the tax on mortgages should be opposed, firmly and decidedly, as it is by this means that a portion of the property of wealthy men can be discovered and made to do its share in supporting the expenses of government.
2. We believe that in all cases where aid is given to agricultural societies to encourage agriculture, that no payments should be made to them when they allow gambling operations.
3. That the bill providing for the formation of county or township fire insurance companies, on the mutual plan should be encouraged and pressed forward to enactment. The insurance combination bears very heavily on the agricultural class.
4. The proposed law against trusts and combinations would be largely in the interests of agricultural sections and ought to become a fact.
5. The bill providing for the manufacture of grain-sacks in our penal institutions, and their sale to farmers at a slight advance upon actual cost, would relieve grain-growers from the effect of one of the greatest combinations ever formed, and every Granger should favor it.
- No. 6. The bill presented for an improved election law, similar to the so-called "Australian system," amended by striking out the provision for numbering each ballot and for indorsing the name of the voter upon the back of his ballot, we think should be passed, believing that such a law would prove one of the most beneficial and important.

Yours fraternally,
D. G. FEELY,
S. P. SANDERS,
HENRY A. BRAINARD,
Committee.

Patrons, do not fail to report the result of your discussions on the above or any other important subject without reporting promptly, if admissible, to your local and the RURAL PRESS. In this instance, also, see that your members of the Legislature are as expeditiously and as impressively as possible advised of the views and wishes of their constituents.

Nearly all the subjects named here have recently been discussed in the RURAL PRESS and Patron. Articles on the "Australian System of Voting," etc., can be found in the RURAL for Dec. 15, 1888, Jan. 26th, Feb. 9th, Feb. 16th, and March 2, 1889.

A GOOD time was no doubt had at San Joaquin County Pomona Grange meeting at Lodi on the 28th, with Brother D. Woodman of Michigan present. He can always say solid and entertaining things without making much fuss about it, and is always welcome wherever known among Grange circles. He is hereby specially invited to revisit Temescal Grange, and we venture to say the Eden and San Jose brothers and sisters.

THE coming session of the Oregon State Grange is expected to be one of much interest to the Order. Let all who can, be in attendance. It opens Tuesday, May 28th.

IMMEDIATE ATTENTION of Grangers is called for discussion and action on the bill now before the Legislature, reviewed by Bro. J. V. Webster in this issue, in connection with the San Jose Grange circular.

PATRONS, ATTENTION.—The circular relating to legislative action, prepared by San Jose Grange, has been sent to all subordinate Granges in the State.

Legislation.

Some Facts Plainly and Ably Stated on Important Bills.

Messrs. Editors:—In the multiplicity of subjects before the Legislature for consideration, two appear most vital: The re-assessment of property for delinquent taxes since and including the year 1880, and that proposing to divide the State and District Fair Associations into two departments. They stand in the order of their naming. The bill presented in the Assembly by Bro. Ostrom and that presented in the Senate by Bro. Langford are identical with and copies from one presented in the Assembly two years since by Judge Venable of San Luis Obispo county. His bill was referred to an unfriendly committee, and consequently was never heard of afterward. It was at the time pronounced by several able attorneys to be constitutionally sound and eminently just. Since then a vast array of legal opinions and decisions have been found fully confirming this view of reassessing property that has escaped taxation through defective law and assessments.

The Reassessment Bill.

As is well understood, the chief purpose of the proposed enactment is to compel the Central and Southern Pacific Railroad Company to pay its delinquent taxes, amounting to over twenty seven hundred thousand dollars. In a recent interview with the *Post*, Colonel Fred Crocker is represented as saying: "Of course we understand that it is a popular thing to attack the railroad company in this way." If it "is popular to attack the railroad company in this way," why is it so? A more generous and liberal people than the average Californian never lived. The meed of praise is always given where it is due. To the energy and enterprise of the Central and Southern Pacific Railroad Company the people of the State are almost unanimous in their high appreciation. Seldom if ever in the history of modern progress can be found an example of more determined power and perseverance than that displayed in California railroad building. For comfort, dispatch, and courtesy of officials there is no superior to the Central and Southern Pacific railroad system. Thus far will every fair-minded man go in praise of our great railroad magnates. Then why is "it a popular thing to attack the railroad company in this way," as Mr. Crocker declares? That there is an "unpleasantness" existing between the company and the people there is no kind of question. It is deplorable, but who is to blame?

Seeing the defects in the old system of railroad assessments, the Constitutional Convention of 1878-9 provided for such assessments through a State Board of Equalization, in cases where more than one county was concerned. There the present trouble commenced. Not being subservient to the railroads, the Board has annually made an independent, and as it considered, an equitable assessment of such property. The rate was raised considerably above the old standard. This angered the railroad people and they have been fighting the tax ever since, and have, in consequence, avoided paying any State or county taxes only what they were "minded to pay."

In his interview with the *Post*, as published, Mr. Crocker says: "We regarded the assessments in those years as invalid, and tried the cases in the State and United States Courts, and won them on every issue brought up."

"We would not have so much cause of complaint were it not for the fact that those who make these attacks will not, or do not, state facts, when dealing with questions affecting the railroad company." Do Mr. Crocker and his people always state facts when dealing with the people? In the above language, attributed to Mr. Crocker, he has certainly prevaricated, and substantially declares that their defense was based, not on the injustice of the State's claim for the payments of his company's delinquent taxes, but, as he says, because "we regarded the assessments in those years invalid."

That many people have exaggerated the "facts when dealing with questions affecting the railroad company" is certainly true. Likewise Mr. Crocker overstates the facts when he declares that "we tried the cases in the State and United States Courts and won them in every issue brought up." Let us see.

Now the facts are about as follows: The main question at issue in the controversy has never been decided and Mr. Crocker certainly knows it. The Federal constitutionality of the assessments levied by the State Board of Equalization as provided in Art. 13, Sec. 10, of our State Constitution, has ever been and is the chief point in the controversy, and has never been affirmed or denied by the Supreme Court of the United

States. That august body has been switched off on a side-track by the railroad's attorneys every time the question has been brought up for adjudication.

First, in the San Mateo case, the main point was squarely presented on its merits, argued and submitted, when the railroad people, finding that the decision would be against them, telegraphed to Col. Creed Haymond to go down to San Mateo and pay all the taxes due the county with costs, which was hastily done, and upon this showing before the court the case was dismissed. In the San Bernardino case the court was switched off from the main track to the fences running parallel with it, and consequently decided that the assessment was illegal, because said fences were assessed as a part of the road-bed. Subsequently the same court was run off on the franchise tangent, and decided that said franchise being a Federal gift, could not be assessed for State and county purposes. Thus we have been going helter-skelter for the last nine years without any practical results. So in order to finally settle this apparently interminable controversy, the bill referred to has been introduced for approval by the Legislature.

It is certainly just in its provisions. Its chief purpose is to reassess all property of the Central and Southern Pacific Railroad Co. for the several years since and including the year 1880 (save that of 1888-9 and for which this tax has been fully settled) giving full credit for the amounts already paid and to enforce the collection of the residue, less the taxes levied against the franchise, which, as before stated, has been declared illegal.

This is all and nothing more. It gives the railroad people a chance to gracefully get out of its unpleasant predicament, and at the same time settles the controversy in a way that should be acceptable to all concerned. Justice and equity to struggling taxpayers all over the State demand that the bill shall pass and be enforced, consequently our legislators, severally and collectively, should be urged to secure this end.

Agricultural Appropriation Division and Anti-Gambling Bill.

The second bill mentioned is also of great importance. The purpose of which is to divide the State and District Agricultural Fair Associations into two departments—to be termed a stock department and an agricultural and horticultural department, between which the State's biennial appropriation for their support shall be equally divided. As the law now stands this is never done. The reason is that every agricultural fair board in the State is chiefly composed of stock or sporting men, consequently are disposed to favor the interests of that calling rather than that of the small farmer and horticulturist. This tendency is but natural and can only be restrained by a legal and equitable division of the appropriation. Another provision of the bill is that no gambling in any form shall be allowed on the fair grounds, nor in any other place under the jurisdiction or control of the Board of Directors of any such fair associations.

In order to enforce the spirit of this section it is further provided that the president and secretary of each and every such fair association under State control shall make oath or affirmation that no gambling in any form has been allowed on the fair grounds or in any place under their control, during the progress of the fair, and forwarded to the Controller of the State before any of the appropriation can be drawn out of the State Treasury. It may be said that the law, as now formed, prohibits gambling in such places. Very true, but it is not enforced and never will be, because of the unpleasant duty devolving upon somebody to make formal complaint and give testimony when the case is on trial. But the condition in the law proposed that if gambling is allowed the appropriation shall be forfeited, and requiring the president and secretary of such associations to make affidavit that gambling in no form was allowed, before the appropriation can be paid, coupled with the fear of a term in the penitentiary for swearing falsely, would effectually bar the appearance of cards, dice, "wheels of fortune" and other devices to rob boys and suckers out of their money, to the disgust and harrow of wives, sisters and mothers, who have heretofore observed such practices on nearly all such occasions.

Both the propositions herein contained were unanimously indorsed by the State Grange held at Tulare last October. A Legislative Committee, consisting of Bros. S. T. Coulter and Thos. McConnell, are attending to the work in Sacramento, and it is certainly the duty of every Patron and farmer in the State to strengthen their hands in every available way.

J. V. WEBSTER.

Creton, Feb. 20, 1889.

An Interesting Address.

At the meeting of Watsonville Grange, February 16th, installation of officers was the order of the day. On taking the chair, Worthy Master Edith Z. Roache said:

Brothers and Sisters:—Since my election to the highest office in your gift, I have had abundant time for reflection. During this time two conflicting thoughts have continually warred for the mastery.

The first was: Am I doing my whole duty to the Grange in allowing myself to be placed in this more than responsible position? The answer to this question was a prompt no. For when I considered how tempestuous was the sea on which our Grange ship is launched, how dangerous the shoals, how terrible the vortex selfishness into which it is plunged, I saw what the requirements of an officer to guide it should be, and shrunk from it, knowing that it needed a stronger hand, a wiser brain, a more subtle mind, than I possessed. On the other hand, I remembered that reforms are exceedingly slow; that radical changes, however just, carry responsibilities peculiar to themselves. Knowing also the prejudice that men, and especially women, are not slow in exhibiting toward any woman, dragged, as they are pleased to term it, from her "legitimate sphere" into the garish blaze of public notice, I again hesitated, for, thought I, how can a woman contend against this array of dangers? Amid my confusion this idea occurred to me: A fact gleaned from an atom is as much a fact as one gained from a mountain. A lesson taught by a flower is as truthful as if from a giant oak. Right is a great, undying, universal truth that cannot be confined or hampered long by the narrow channels of sex, public opinion, creed, race or station, but, like some brilliant star, casts its radiance on all alike, and while few may see the glory, the most humble may guide the feet of yet humbler travelers on the great highway called life. But not yet satisfied, I went still farther in wandering mazes lost—thought of my own insignificance, of the great and far-reaching principles that underlie all human action. The good and bad, the vices, follies and frailties of mankind, passing as in review before me, and again my courage faltered, when suddenly a voice said: "Coward, would you shirk your duty because it is disagreeable—because of the wounds you may receive in battling for right? Success means effort. To gain the mountain-top, its rugged sides must first be scaled." At this stage of my reverie, the words "On, Stanley, on!" flashed like lightning before me. I had scarcely recovered from my surprise when I unconsciously uttered these words of our obligation: "I solemnly promise to labor for the good of our Order, our country and mankind." This decided me. I had crossed the Rubicon, and now I stand before you in all my weakness, but determined to do my best.

Law may prescribe conduct, fashion may disfigure the body, the shaft of the unkind or false word pierce the heart, while prejudice and ignorance may distort the soul. But the mind—ah! the mind, untrammelled by naught save the glebe in which 'tis nourished, may gleam, glisten and scintillate, unshackled by even the infinitude of space. Here, then, is common ground; here, then, is to be found the true worth of humanity, when divested of all that wealth and position can give. Here no Brutus to our ambition is found, save self. This, brothers and sisters, is something we all possess only in different degrees. Let us use it in its highest sense in furthering the interests of our Order we all love so well, but for which most of us sacrifice so little. Onward and upward should be our motto. For when knowing that the cause for which we labor is the noblest in which mortals can engage—"the elevation of mankind" from the lowest depth of selfishness, greed, and inhumanity to that exalted position wherein he becomes the noblest work of God, the spirit of the glorious task should so suffuse our being, that with justice for our standard, progress for our watchword, freedom for our talisman, happiness for our reward, we should draw the sword of action and with shields of love strike a responsive chord in the hearts of every true man and woman in the land. This is for what we are organized. To fail short of it is to fail in what every Patron should consider a special charge. Until this is done, let no man or woman assert that the mission of the Grange is accomplished, or that they individually have done their whole duty to their God, their country and their firesides. And now, Patrons, in conclusion, I do earnestly request that you accord to me that generous support which has characterized your intercourse with my predecessors. For it must not be forgotten that without your zealous and intelligent co-operation, a Master alone is helpless. Let us unitedly strive to make the Grange one family indeed, for around it center the hopes of our nation's future glory. With dissensions from within and jealousy from without, with boldness and badness ever increasing and annually yielding an immoral weed crop, that is swiftly and surely stifling truth and honesty, and fast making us a nation of intellectual sharpers and rascals, we turn imploringly to the conservative tillers of the soil. In the name of justice and patriotism, beseech them to come to the rescue of our poor suffering country.

Let us then, brothers and sisters, render ourselves worthy of the great confidence reposed in us. By every effort of our being strive to ennoble labor, and "by our united efforts return to the wisdom, justice, fraternity and political purity of our forefathers."

How Shall We Spend Our Time in the Grange?

Bro. Dewey: I have asked a question. And as it is not in good taste to treat a question in silent contempt, I want an answer either oral, mental, or written. Life is short and time is precious and we have not a moment to throw away. I often think if I had started in 20 or 30 years ago and devoted one hour a day to some useful purpose, how much I might have accomplished in that time. I spent ten years on an invention and finally received the great seal of the patent office in Washington. If each one will make up his mind how the time outside the routine business in the Grange should be spent and go there and express his views, we will have a diversity of opinions, a diversity of subjects, many a happy hit, many a useful suggestion and open our minds to a world of new ideas. If we cannot learn "everything of something, let us learn something of everything."

It has been suggested to me that I should propose questions for discussion in the Grange throughout the State on certain dates. I am willing to propose the questions, but it strikes me that all the questions that I might suggest might not be applicable to all locations.

Some few questions would be applicable to all locations, such as: What depth and size of plow, that land may retain moisture the longest? How soon after plowing should land be harrowed? On what kinds of soil is it best to use the clod-crusher, and on what the roller? Does it damage sandy soil to plow or cultivate any time except when excessively wet? Should any land be plowed when it is so wet that it leaves the mold board in a polished or glistening condition?

These questions and sundry others are applicable and proper to be discussed in all locations, and will apply to all branches of land culture.

There are other questions, such as: When to sow alfalfa? Does the frost damage the young plant? At what stage of growth should the first crop be cut? What crop should be cut for seed? Such questions as these should be discussed in the locality where such crops are grown. Topics on butter-making and fruit-growing should be discussed in their respective districts. If a Grange is so fortunate as to be in a locality where there is a diversity of culture going on, then they can hardly take up a question amiss. It seems to me to be better for each Grange to select their own questions and time for discussion. But do not fail to select something, and select something that is familiar to all, so that the most humble and timid can participate in the discussions.

The Grange was not instituted altogether to assist the bright ones, but it is a duty, and I feel it a privilege, to lend a helping hand to the most humble. A great many members will come into the Grange and say they have nothing to offer, nothing to suggest, nothing to exchange.

Has such a person's mind been a blank for the last two or four weeks? Has his vision been obscured? Have his ears been stopped? Has mental paralysis taken possession of his whole being?

If any individual or Grange will notify me that they are short of material for discussion, I will furnish them with enough to last their natural lifetime. If you are about to make improvements on your place, or invest in improved stock, or embark in a new enterprise, why not state that in the Grange and ask suggestions? It may assist you greatly in your enterprise, or save you from failure and losses.

I do not believe we advise or discuss our plans with each other enough. In ten minutes' discussion the other day with my foreman, of a proposed change, I saved at least \$10 and made it much better.

We tillers of the soil have got to furnish the bread and butter to keep the rest of the world alive and in good humor.

There is no good reason why we should be downcast or despondent. Let us go to our task as though it was self-imposed, and with no less satisfied expressions on the face of the producer than there are on the face of the consumer.

By our own individual and collective exertions raise the standard of the tiller of the soil to that proud position where it shall be the envy of the world.

Burn the bridges in the rear so there shall be no retreat. Then every member will feel the responsibility and redouble his exertions to gain the goal.

D. F.

LAMBS "EARNING" THEIR WAGES.—One of the San Francisco dailies tells how some "laborers" on the new wings of the City Hall earn their *per diem*. In mixing the concrete for the foundations, large beds of broken rock and cement are made, and these are stirred up by the use of an ordinary garden cultivator and a one-horse plow. Each of these implements requires no less than three men to run it. One man leads the horse, another holds the handles and steers, and still another walks alongside and bears his weight on the beam of the plow or cultivator. The queer spectacle has been watched by many during the past week, and once in awhile a passer-by who had had a little experience in engineering a one-horse plow without the assistance of two supernumeraries, would stop and gaze in wonder at the "city" method of plowing.

"Flash," the Firemen's Horse.

Flash was a white-foot sorrel, and run on No. 3; Not much stable manners—an average horse to see; Dull an' moody an' sleepy on "off" and quiet days; Full of turbulent sour looks, an' small sarcastic ways.

But when, be't day or night time, he heard the alarm-bell ring, He'd rush for his place in the harness with a regular tiger spring, And watch with nervous shivers the clasp of buckle and band. Until it was plainly evident he'd like to lend a hand.

An' when the word was given, away he would rush an' tear, As if a thousand witches was rumplin' up his hair, An' wake his mate up crazy with his magnetic charm; For every foot-beat sounded a regular fire alarm.

Never a horse a jockey would worship an' admire Like Flash in front of his engine, a racin' with a fire; Never a horse so lazy, so dawdlin' an' so slack As Flash upon his return trip, a-drawin' the engine back.

Now, Flash got tender-footed, and F'a h was finally sold To quite a respectable milkman, who found it not so fine A-bossin' of God's creatures outside o' their reg'lar line.

An' once, in spite of his master, he stroll'd in 'mongst us chaps, To talk with the other horses, of former fires, perhaps: Whereat the milkman kicked him; wherefore, us boys to please, He begged that horse's pardon upon his bended knees!

But one day for a big fire as we were makin' a dash— Both of the horses we had on somewhat resemblin' Flash— Yellin' an' ringin', with excellent voice and heart, We passed the poor old fellow, a-tuggin' away at his cart.

If ever I see an old horse grow upward into a new, If ever I see a driver whose traps behind him flew, 'Twas that old horse, a rompin' an' rushin' down the track, And that respectable milkman, a tryin' to hold him back!

Away he dashed like a cyclone for the head of No. 3, Gained the lead, and kept it, an' steered his journey free; Crowds a yellin' an' runnin', an' vainly hollerin' "whoa!" Milkman bracin' an' sawin', with never a bit of a show.

He watched till he see the engine properly workin' there, After which he relinquished all interest in the affair, Laid down in his harness, and, sorry I am to say— The milkman he had drawn there drew his dead body away!

That's the whole o' my story; I've seen more'n once or twice That poor dumb animals' actions are full of human advice; An' if you ask what Flash taught, I simply answer you then, That poor old horse was a symbol of some intelligent men. —Will Carleton.

Mrs. Pringle's Quiet Day at Sunnyside Ranch.

[Written for the Rural Press by SAMUELLETTA DICKSON.]

The clock struck nine just as Mrs. Pringle gave the porch the last vigorous stroke with her broom and then went into the house. "I shall have a nice quiet day all by myself," she soliloquized, "with the older children all at school and little Johnnie gone with his father to town. It is only Thursday." This last remark was addressed to a pile of mending that lay on the sewing machine. She stopped just a moment to glance at the contents of the last magazine, as she dusted the table, and gave a nod of satisfaction. It was the first chance she had had to peep at it, although she had listened the evening before to the children's comments on the pictures, while she finished a new jacket for Tom, who had come from school with his old one in a deplorable plight. She now put away her broom and duster, gave a look about the kitchen to see if all the necessary work was done, and assuring herself that it was, started to take a bit of rest with the magazine. Truly she had earned her rest, for since sunrise she had been working as fast as she could.

Besides breakfast for her family, chickens, pigs and calves had been fed; the milk-pail, churn and long row of milk-pans shining in the sun told their story of labor; there was the odor of newly baked bread and pies in the kitchen; four wide-awake children had been prepared for school; and John Pringle had been helped off to town with a wagon of produce, eggs,

butter and fruit. He had taken four-year-old Johnnie with him "to give mother a day of rest," something that came but seldom in her busy life.

With the feeling of enjoying a great luxury, she now took up the magazine, dropped into her rocking-chair, and, drawing a long breath of contentment, was just settling herself for solid comfort when a sharp bark from Collie, the faithful dog, warned her that something was wrong. Looking out, Mrs. Pringle saw in the wheat-field the whole band of Neighbor Smith's cattle. The magazine was dropped without even a thought of regret, for those cattle must be got out quickly, and there was no one to do it but Mrs. Pringle herself, for John and the children would not be home till night and Farmer Smith was off haying five miles away.

Hastily throwing on her gingham sunbonnet, she went to the corral, mounted the black mare, and, calling Collie, began her undertaking.

First she tried to head old Lineback, the leader and the worst fence-breaker in the county, through the broken place in the fence; but that wise old cow had urgent business in another part of the field, and thither she hastily departed followed by all the rest, except one half-grown calf.

He looked so gentle, and there was that proverbial meekness, which poets describe, in his liquid eyes, that Mrs. Pringle thought he could be induced to retrace his steps, and she gently suggested to him to do so. He apparently acquiesced in her wishes, and walked along before her toward the opening in the broken fence, only pausing to take an occasional bite of wheat.

He was right there; his head was in the right direction. Mrs. Pringle gave him a slight touch with her switch, and uttered a quick cry, when lo! instead of jumping through the aperture, he suddenly wheeled, lowered his head, elevated his tail like a flag of defiance, and with an explosive "ba-a-k" dashed after the rest of the herd.

Around and around the field the aggravating beasts led the tired woman, till finally they were expelled through a gate at the opposite corner whence they came in. Having proved conqueror in defense of her home, or rather grain-field, Mrs. Pringle might now take her rest, so, with magazine in hand, she sought the cool shade of the trees that fringed the creek near the house, where, seated on a low, swinging willow limb, she enjoyed her reading, while every sense was filled with delightful gratification.

A delicate odor from trees and flowers floated about, and the singing of birds mingled with the soft droning of insects.

If her eyes, tired with reading, lifted themselves from the printed page, they looked only on objects that pleased—whether trees, birds, flowers, or even the palpitating heat as it quivered above the earth.

Lulled by the sensuous harmony, Mrs. Pringle had nearly fallen asleep when she was aroused by a rustling among the dry leaves in a clump of willows, and turning to see what it was, she espied the head of the old gray turkey for whose nest the children had hunted the ranch over.

Discovery is a source of gratification, whether it is of the revolution of the earth, a continent, or a hen's nest in an unexpected place; and the human mind delights in agreeable surprises.

Mrs. Pringle's unlooked-for discovery drove away all her sleepy reveries; she put the eggs in her apron and proceeded at once to the barn, where she set them under a faithful old hen safe from the coyotes. Having disposed of the eggs to her satisfaction, she took a dish of cracked wheat and a can of water and made the round of the coops in which were her small chickens. This done, she went into the house and took a lunch of bread and milk, at the same time finishing the magazine article she was reading when interrupted by the turkey. Intent with her reading, she was holding her spoon with the last mouthful resting on the rim of the bowl, when Collie's alarm was again heard, and her quick ear detected mingled with it a pig's note.

"There! John went off without fixing that sow's pen, and the pigs are all out!" she exclaimed.

Down went magazine and the untasted mouthful, and clapping John's old straw hat on her head, she rushed out and saw seven plump, energetic black pigs happy as possible in the vegetable garden. Disturbed in their bliss, seven small black snouts were held up in a manner half of inquiry, half of saucy defiance; but a sudden attack of Collie brought a quick change over their spirit of bravado, and with many notes of squeals and grunts, away they scampered in their undulatory, happy gait, for all the world like a school of porpoises, three in one direction and four in another. The latter band Collie chased toward the pen, and Mrs. Pringle succeeded in getting them back with little trouble, and putting a plank over the place where they dug out, thought she had them secure.

Meanwhile Collie had started after the other three, who had found the June apple tree in the orchard, and was now in full chase after one which ran for a barley-field near by.

Another one ran into the chicken-yard, where Mrs. Pringle found him eating wheat in one of the coops, and he was easily taken captive and returned to the pen.

She then began a search for the third pig, which was little Wee-Wee, but he had vanished.

She looked all about but could find no trace of him till a happy, contented little grunt revealed him in the front yard vigorously cultivating Annie's flower-bed.

"Oh, you little wretch!" cried Mrs. Pringle, hastening to save her daughter's loved plants that she had tended and watered with so much care. Seeing that he was discovered, the pig only hurried the faster to accomplish his self-imposed task, and plunging his energetic little snout under the roots of Annie's favorite geranium, tossed it completely out of the ground. Mrs. Pringle aimed a clod at him, but it missed him and struck off the one bud on a small Bon Silene rosebush, while he turned toward her a pair of small wicked eyes twinkling with self-compacency and continued his digging. But another clod better aimed, and a threatening stick, drove him off, and after a chase several times around the yard he was caught and put into the pen in a hurry, for a terrible outcry among the barley told that Collie had seized his pig. As he was apt not to be very gentle in handling refractory pigs, Mrs. Pringle rushed as fast as possible to his rescue, for vexed as she might be with their mischievous pranks, she did not want her fat little porkers injured. She picked up the struggling pig, which squealed louder now he was off his feet than when Collie had him by the ear, and started for the pen.

The old mother hog, in her frantic efforts to get to her distressed young one, had knocked down the plank, so the pigs were crawling out again as fast as possible, and Mrs. Pringle was just in time to prevent the last one from getting entirely out. A man would have sworn, but Mrs. Pringle, not being a man, simply said "Oh dear!" as she dropped the squealing pig into the pen and leaned panting and out of breath against a post while she wiped her hot, perspiring face with her apron.

Putting the plank again over the hole and tying it with a bale-rope, she said, "There now!" triumphantly to the inmates of the pen, and then started to hunt the runaways before they should get into mischief. In her haste to get the pig away from Collie, she had left the gate into the yard open, and Wee-Wee had returned bringing the rest with him. They had found a five-gallon oil-can partly full of sour milk which they had overturned, and were enjoying to their hearts' content. At this stage of affairs, the dog detected them, and with a loud bark, made a sudden dash through the gate after them. One pig had his head in the overturned can, and frightened by the dog's unexpected arrival, wedged himself in further, so he could not turn to get out, and Collie's nips and pokes in the rear prevented him backing out. His desperate squeals muffled in the tight can were comical to hear, and Mrs. Pringle laughed at the sight till the tears ran down her cheeks. But with the three other pigs loose in the front yard, she had no time to lose, so she picked up the can, pig and all, while the poor prisoner, terrified still more at finding himself standing on his nose, an involuntary acrobat, uttered prolonged and piercing cries till he found himself safe in the pen.

The three remaining pigs, driven from the milk by Collie, had run under the house where they found a sack of potatoes, and when the dog made an attack on them there and chased one out into the yard, the other two returned to the potatoes. So in and out under the house went pigs and dog, but never near the open gate, although Mrs. Pringle made vehement efforts to head them that way.

Tired and out of breath, she at last stopped and took a view of the situation as follows: "I may chase you all the afternoon, and never be able to get you out alone. I'll pen you in till the children come home."

Fortunately only one side of the house was open underneath, and she found boards and boxes enough to barricade that all except a few feet. After she had dragged out the potatoes, she said to the dog: "Now, Collie, you lie down there, and don't you let one of those pigs get out!"

The intelligent creature wagged his tail as if he understood, and lay down by the opening. Mrs. Pringle went into the house, bathed her heated face, and then sat down in her low rocker and for several moments enjoyed the luxury of absolute rest, till her eyes chanced to see the basket of mending.

"This will never do," she said, her native energy reproaching her for the indulgence of *dolce far niente*; so, drawing the sewing machine near the open window, she began her work, and while the busy fingers made the needle fly, she hummed a soft, low song. She was one of those happy souls who lighten the burden of toil and care with singing, and any one who knew her could read her thoughts by the tenor of her song. Now she trilled a love ditty as memory went back to the old home among the New Hampshire hills, and to the little red schoolhouse where she and John used to go to school, and where one night going home from singing school, he had asked her to be his wife. Then a sad strain sounded through her singing as she reviewed leaving the old home, and the trials of the new Western home; and while her needle neatly wove threads into the ragged toe of little Johnnie's stocking, there were tears in her eyes as well as in her mournful chant, as she remembered the tiny grave where her first baby lay, whose little feet rested ere they learned to walk. But as she laid aside the mended stockings and took up Tom's jacket, that always had a tear about it somewhere, her tune became gladsome, for she was thinking proudly of the boys and girls who had

come to her since, and her song now was like the owner of the jacket—impulsive, rollicking, but kind-hearted Tom, the pride of his mother's heart, in spite of his endless pranks which were ever getting him into unforeseen disasters.

Just then the squealing of her captive pigs under the house reached her ears, and with an exultant chuckle she began to sing:

"Three black pigs, oh, how they run!
They all run after the farmer's wife,
She caught them all under the house,
Did ever you hear such a trick in your life,
Of three little pigs?"

Thus with active hands and happy thoughts, Mrs. Pringle's afternoon glided by, and not long after the clock struck four she heard the sound of wagon wheels and laughing voices, and the next moment Farmer Pringle drove up with a wagon full of children whom he had picked up at the schoolhouse.

Before the horses had stopped they began to tumble out in noisy glee, and all began to talk at once to mother who had come to the gate to greet her flock. How she managed to know what each one said all at once would have puzzled any one but a mother used to such a crowd; but she did, and at the same time told them her tale of adventures, and added: "Now get off your school clothes quick and catch the pigs and feed the chickens, while I make a fire, skim the milk and get your supper." As they scattered helter-skelter, making as much noise as possible, Mrs. Pringle, as she took the basket of groceries from her husband, said: "It does seem good to have the children back after a quiet day!"

Hollister, Cal.

A Real Country.

[Written for the Rural Press by MAUDE S. PRASLER.]

How rarely children realize, when studying of the ancient life in foreign countries, that such things really ever existed.

Time, as well as distance, throws a misty veil over it, changing it from an affair of everyday life to a half-probable tale of the past. The most unreal to me of all the lands of which I studied in my younger school-days was Greece. Yes, Greece, the country which the C. L. S. C. is presenting so attractively to its students this year. I could bound it without mistake; could tell of Leonidas and his dauntless three hundred, of the battles of Marathon, Salamis, and other "victories no less renowned;" had read of the glorious Age of Pericles; but when the day of its history, as laid down in my text-book, was over, it was as dead to me as if the sea had swallowed it where it lay.

Much of this was due to the crowding and cramming we had to undergo at school, but there were other reasons in after life, and my attention gradually drifted away from it, save as recalled by an occasional mention of political matters in modern Greece occurring in the newspapers.

I became familiar with other countries from descriptions I read of them in the stories and novels of the day, but cannot remember more than a single novel I have read, the scene of which was laid in Greece.

I am glad I am to have a chance this year to become better acquainted with Greece as a real country, as well as to review the ground I passed over in the classics years ago.

Let us keep closely to our work, fellow-students in the C. L. S. C., and be sure we will not feel so far away from Greece as many of us do to-day when we have finished the ten months of work laid out for us in this year's course.

Grass Valley.

Must the Piano Go?

It does seem as if the piano had reached about the end of its tether. Its compass, says a German journal, has been extended to the utmost acoustical limits, and it has been improved until there appears to be no more room for improvement. The virtuosi of the present day have attained, practically, perfection in execution, and the compositions of Chopin, Schumann, Liszt, Tausig and Rubinstein are as difficult as any music can be which is capable of being performed on the piano by a single pair of hands. Then what next? Nature abhors a vacuum and art abhors a halt. There is no use in doing over again what has been done already well enough. We must be original. We must advance. We must invent new lines or new ideas in composition, or else not compose at all. We must play better, or at least try to play better, than Rubinstein or Von Bulow or Joseffy, or else confess ourselves mere acolytes and imitators. This is the spirit of the true artist—of true art. But it is hard to see how there can be any further progress in piano music or piano playing. In this crisis, however, it is allowable to hope to see before long some new instrument no larger, no costlier, no harder to master, than the piano, which shall combine the string principle and the wind principle, and unite the best qualities of the piano and the organ—in other words, a miniature or microcosmic orchestra. Such an instrument would be unhampered by the great deficiency of the piano, which is an inability to sustain tones, or, rather, to sustain some tones while not sustaining others; and when such an instrument is invented there certainly will arise a new group of performers, altogether distinct from the present piano virtuosi, and musical composition will take a fresh start on a line of absolute novelty and originality.

The Farmer's Wife Goes from Home.

(Written for the RURAL PRESS by MARY P. ARMS.)

It would not be strange if the busy round of work which so fills the days of the farmer's wife were to make her feel that going from home lies quite out of the range of her possibilities. If there is no one with whom to leave the children, they must needs be arrayed in something better than the clothes required for every-day wear, and taken from home with the mother, the task becomes too hard to be of frequent occurrence. If it seems among the necessities of things that the farmer's wife go from home some days and take her little ones with her, what a piece of work it is to make ready, to be sure! It is well that woman's life be given over to the smaller details of living, or else some of the many necessary things would surely be overlooked. So many different wants are to be thought of, so many different articles provided, and so much thought given to the comfort of those who are to be left at home; so much providing of substantial food for the farm hands, who, if they look well to things outside, have little time left to devote to the culinary art, even if they were versed in its mysteries. Many last things are to be done before taking children for a winter ride in a north land. What a putting of overshoes on to small feet, and a tying of hoods under small chins; what a distributing of mittens and muffs; what a putting on of veils, to at least tangle the wind, as it makes fierce onslaught on small noses and cheeks. And while the mother-hands are attending to all these things inside, the farmer may not be less busy without. Of course there are wealthy farmers who do not find it necessary to give attention to small matters, but by far the greater portion of those who till the soil are at a loss both for funds and time to meet their needs. It is well, then, for him who has learned, to combine business with pleasure, and whenever the latter shall take him to the city, to have something to dispose of for which a larger price will be offered than in the villages lying nearer home.

The true secret of successful farming is to produce much. We do not feel the experience of our lives to agree with the poet's assertion:

"Man wants but little here below;"

And while our wants are many, the variety of our farm products should be numerous, a part of which we should dispose of. Just how many boxes of this same farm produce—butter, eggs, cheese, or honey—can be packed away in a light spring wagon, wherein a family are to ride, experience alone can prove.

Those of us who live in regions remote from towns find one of our sources of disquiet in the fact that our children are denied the advantages others in more favored localities possess. But the law of reciprocity works here as well as elsewhere. When children have been denied any glimpse of life in even our smaller cities until they are six or eight years of age or even more, how wide open their eyes are, how all their faculties are on the alert, and how wise are the questions they put for the solution of older heads.

When a child has lived the first half-dozen or more years of his or her life without seeing a steam engine or a train of cars, how intelligent and reasonable are the questions which arise in his or her small mind; while to the children who cannot remember the time when they did not see them, they frequently bring neither interest nor inquiry. When they for the first time rush past the child who is old enough to marvel over their mechanism, the parent has need to recall that knowledge which was first presented in the form of natural philosophy, away back in the beginning of things, and in those early days seemed like hard, dry facts. How many pleasant things these small questions will bring to our minds—bits of biography from the lives of Stephenson, Watt, and others, to be laid by in store when our little ones shall have gone home, still wondering over the strange things they have seen.

No matter how much of weariness and exhaustion a trip from home may hold for the farmer's wife, there is always so much to enter into it, so many new thoughts, such a variety of changing landscapes, such botanic treasures by the roadside. Even if our going be at a season when Flora's bounties are not spread for our enjoyment, the pretty shaping of a twig may be enough to make a picture in our minds which we shall carry home with us. The glimpses which we may have into the life of other homes may be helpful to us. We may gather new thoughts to take into our daily living, to prevent the all-work of our lives from making our horizon narrow.

To those of us who have not kept our sympathies bounded by the four walls of our homes, there is much of interest in the woman's work which is going on in all our thriving cities. The Society of Christian Endeavor, the Young Women's Christian Association, the Woman's Christian Temperance Union and other organizations are helping to lift the world to a higher plane. Seeing this good work, women with fewer home cares, and better opportunities than ours are doing, should not make us feel that we have neither part nor lot in these things, but in our own far-removed homes we may feel ourselves to be silent partners in all the enterprises which reach out to enrich the world.

Beckwith, Plumas Co.

YOUNG FOLKS' COLUMN.

A Doll's Complaint.

I want to tell you about my troubles. May-be you don't believe that dolls have any; but they do. Real, truly ones, as bad as grown folks, and worse.

Years and years ago, when my mistress, Miss Lettie, was a little girl, I used to have a lovely time, Christmas. She always hung one of my stockings up, and I found such pretty things in it. I had a maid, then, old black Dinah, and silk dresses, bracelets, earrings and a perfectly lovely fan.

Miss Lettie got to be a young lady too soon, and gave me—me, a Paris doll with real hair and eyes that open and shut, to her little brother Ben. He slung me around like a cat—a real, detestable cat—broke my chamber-set, tore my best dresses.

After all, we had a pretty good time, for he took me out coasting with my bonnet on hind side to and my muff on my feet. I looked like a guy. (I learned that word from an English soldier Ben had one Christmas.) That soldier was only a wooden head; but he was stately and tall and did very well for an escort when Benny carried us to ride in his little red wagon. Alas! my soldier was chewed up by Ben's abominable Gordon setter. I detest curs!

When I got my ankle broken, and little master made me a long calico frock, himself, I thought the cup of my misery was full.

But now dear Benny has poked me away in the garret, with rags and old furniture; and here I sit in soiled clothing and turn my beautiful eyes up to the cobwebbed ceiling, days and days. Ah! how the rats run round me nights. One touched me with his cold nose. I shudder to recall it.

No Christmas for me! no fete days at all! I look out upon the children in the streets. Poor, pinched little ones I see down in the back street, and sigh, yes, positively sigh to be hugged to some little girl's warm heart and touched by her sweet lips.

Won't you, please—you who do so much good in the great wide world—tell all the girls and boys who have grown up to give their dolls away to some little child who has none.

It is not too late to make some poverty-pinched one happy with an old, old doll, like me or even Dinah.

A long time ago my Miss Lettie came up in the garret and picked me up, saying: "Poor old dolly! I must dress you all up some day. I didn't know you were such a fright."

How my heart ached! For weeks I lived on that promise; but she never came and I think my heart is broken.

Indeed, I know the sawdust is coming out of my side. I am not so very old and my color is good, only Benny washed my face so much in snow my pink cheeks are gone.

May owners of dolls read this and begin the new year, or even later, by giving their dolls, who suffer, positively suffer for some one to love them, to dear, little, chubby girls. Ah! how I love them. Yours respectfully,

—Portland Transcript.

FANTINE.

Tender to Animals.

The love of St. Francis of Assisi for the brute creation was so remarkable that he stands at the head of the long list of saints who have protected and cared for the dumb creatures that are at the mercy of men.

The holy ones of earth have always shown this tenderness. St. Anthony preached to the fishes; St. Jerome healed a sick lion; St. John the Divine cared for a pet partridge; St. Anselm protected a little hunted hare from the sportman's fury; St. Aventin out of pity put back into the water some fish which had been brought to him. Many other good hermits made friends of the birds. St. Waltheof would do penance for killing an insect; St. Philip Neri reproved a man for treading upon a lizard; St. Bernard loved to free birds from the traps set for them; St. Francis de Sales wept with joy to see some doves share a meal with sparrows.

And so St. Francis of Assisi was not alone in caring for the humbler creatures of God. His gentleness toward them was something wonderful, and those who love him and would be like him, even by walking in the tortuous and troubled ways in which all saints must tread, may do his work on earth. And a good way to set about it is to refrain from ill-treating a dumb beast.

This is the simple and touching way in which he talked to the birds: "My little sisters, the birds, you owe much to God, your Creator, and ought to sing His praise at all times. * * * Beware, my little sisters, of the sin of ingratitude, and study always to praise the Lord."—Rev. Daniel E. Hudson.

A CAT AT MEETING.—In the course of a prayer-meeting in the vestry of a New Bedford church, a pleasant-looking pussy-cat, with tail erect, came in and walked leisurely to a prominent place on the platform. A member of the church took her in his arms and put her outdoors at one side of the building, but in less than two minutes she came in at another door and walked again to the platform with all due gravity and a home-like manner. Then the janitor took Miss Pussy, who was a very tame pet, and allowed any one to handle her as he pleased, and went out with her through a dark

room in which spare settees are piled. He had scarcely closed the door that shut him from the light, when he tumbled over some of the loose furniture, making a racket that caused considerable laughter. Even the pastor could not help wrenching his mouth in marks of parenthesis. The janitor is a persistent man, and he put the cat out and returned in triumph. But his triumph was of short duration, for Pussy soon came in again. Before she got to the platform, a wise lady picked her up and held her to the close of the meeting.—Boston Herald.

GOOD HEALTH.

Health of the State.

The report of the State Board of Health for the month of January has been issued, embracing returns from 68 cities and towns containing a population of 700,850.

The total number of deaths for the month was 992, or a percentage of 1.41 per thousand for the month, or a rate of 16.92 per thousand for the year. The percentage is slightly above the average, the increase being almost entirely due to the diseases affecting respiratory organs.

Consumption claimed 165 victims, an increase of 28 over the previous month. Pneumonia was unusually prevalent and fatal, 103 dying from it. Bronchitis numbered 34 cases. Diphtheria and croup were fatal in 43 cases, while scarlet fever claimed but 1 victim throughout the State for the month.

There were only 3 fatal cases of smallpox in this city and 1 in San Leandro.

Diphtheria seems to have a wide prevalence, but few localities being free from its ravages. The report recommends the most radical precautions against its spread. The following remarks which we condense from the report should be read and observed with care: The impression seems to be very general that the frequency of this disease is in the main dependent upon bad sewerage, defective drains, foul air, and insanitary conditions generally. Although these conditions may render the persons exposed to them more liable to take the disease from the deteriorating influence upon the general health, yet they do not generate diphtheria, nor is the disease capable of spontaneous generation any more than is smallpox or cholera. In order to produce diphtheria you must have the germ of the disease present, and then to be developed it must come in contact with a suitable soil for its growth. From this fact the inference is plain that although prudence requires that the sanitary condition of the patient's surroundings be kept in the best possible condition, and all predisposing causes which might deteriorate the patient's health be removed, it is infinitely more important to insist upon the complete isolation of those attacked, and the rapid destruction by fire of all substances likely to be the conveyances of contagious germs. Diphtheria germs, as far as can be ascertained, are carried in the air, exhaled by the breath, deposited on the clothes, on the walls, everywhere in the room; hence the necessity for the most thorough disinfection of the person and the dwelling before intercourse with well persons is allowed. If more care was exercised in this regard we would hear less of the disease, and many very valuable lives saved that are now sacrificed by criminal carelessness, and the utter disregard for the public welfare.

Starving a Cold.

How it Can be Done Without Inconvenience to the Sufferers.

The man who originated the oft-quoted and unscientific maxim, "Feed a cold and starve a fever," either did not understand what he was writing about, or he has been widely misunderstood, to the great injury of multitudes who have acted on the absurd maxim. Presuming that the author of it was a physician, who knew something of the nature of a cold and the action of remedies, he must have spoken subjunctively, and not imperatively. And then it would read thus: If you stuff a cold the consequence will be that you will be thrown into a fever as the result of the stuffing treatment of the cold, and then you will have to starve the fever. This is a true and sensible interpretation of this commonly received maxim, which has done as much harm as any of the thousand and one of the popular errors which prevail on medical subjects.

It cannot be explained in the manner mentioned, it must be remanded to the dark ages of ignorance and superstition, and classed with lunar and stellar influences over the human body, with or without and other absurdities long since exploded in the progress of true science. Without dwelling on the nature and causes of colds, or on what physicians call the pathology of these disorders, I will say that a low or even starvation diet for a few days, with the free drinking of warm, mildly stimulating teas, is better for a cold than any drug or combination of drugs. If with this a warm bath or a hot foot-bath is taken, little more will be needed. Nine cases in ten of colds can be broken up in this early stage by a hot-foot or rather leg-bath, keeping the bath as hot as it can be borne until perspiration arises. After the bath, drink a half-pint of hot lemonade and go to bed.—Woman's Work.

A NEW ADULTERATION OF COFFEE.—Science seems to be aiding largely in the adulteration of food products when manipulated by unscrupulous hands. Of late, artificial coffee beans have been found in the European (German) markets. They are made from roasted grain-flour with an addition of dextrine or some such body. There are two establishments at Koln which furnish the necessary outfit, with formula, etc., for the manufacture of the beans. According to an original letter from one of these establishments in the possession of Dr. A. Stutzer in Bonn, from 1000 to 1200 pounds of beans may be made in one day with the outfit, which the firm offers at a high price. The letter further predicts a golden future for the article, but advises that it be used for the adulteration of genuine coffee only in such countries where the laws are not very stringent, etc. These prospects must be very enticing to sophisticators, especially as the imitation is so perfect that only a very critical examination will serve to detect the adulteration. The artificial bean distinguishes itself from the genuine in being perfectly symmetrical and of the same size, and that the epidermal membrane is entirely wanting.

DOMESTIC ECONOMY

Cooking Dried Fruits.

The popular prejudice which exists against dried apples is not without foundation in reason. The leathery, flavorless compound which appeared formerly on our tables in apple sauce or apple pie, its worst elements concealed by flavoring of lemon, had no excuse for existence. The method which secured such a dish as this must have been invented by some old-country maid who was anxious to take a short cut around the right method. Like most rapid ways of cooking, this method has too frequently superseded the proper way of cooking dried fruit. Prunes are barely eatable cooked rapidly, but delicious by the old method. The modern evaporated apple bears rapid treatment a little better than the old-time dried apple; but it is better cooked by the slow old way. Apricots, which are now brought from California, dried by evaporation, are especially delicious, and are quite inexpensive, retailing considerably cheaper than peaches. Peaches are delicious for pies or puddings, or for preserves, cooked slowly. Wash the dried or evaporated fruit carefully and put it in soak over night in a covered porcelain dish. In the morning set the fruit in a broad, shallow, earthen pudding-dish or preserving kettle at the back of the stove; let it rise slowly to the boiling point; there should be just water enough to almost cover them. Let them cook in this way for six or eight hours, then add sugar—about half a cupful to half a pound is enough for apricots or for peaches. Tart apples need more. Let the dried fruit cook about half an hour after adding the sugar. Then remove it from the fire, pour in an earthen dish to cool, and if prunes, peaches, or apricots, serve with cream.—New York Tribune.

AN ORANGE BAVARIAN CREAM.—Grate the outside rind of three oranges and half a lemon in a bowl, being careful not to grate deep enough to take away any of the white inside rind. Squeeze into the same bowl the juice of six oranges and half a lemon. Take one-third of a box of gelatine which has been soaked for two hours in $\frac{1}{2}$ cup of cold water, and pour over it half a cup of boiling water; stir till the gelatine is all dissolved, then pour it into the bowl with the orange and lemon juice. Add a large cup of sugar and stir over the fire till melted; then remove the saucepan from the fire, and strain its contents into a bright tin pail or basin, and set it in a pan of ice and salt. Stir continually till the mixture begins to thicken at the bottom. When it is thickened, but not hard enough to break into pieces of jelly when stirred, add gradually two quarts of whipped cream (measured after whipping). Stir the cream constantly while pouring in the gelatine, and when it is all added, whip it up thoroughly and pour into a mold to form. This cream is very pretty formed in a circular mold with a high peak of bright yellow orange jelly in the center. Surround it with whipped cream decorated with sliced lobes of oranges.

CORN CAKES.—Two cups of buttermilk, a half-teaspoon of salt, half-teaspoon of soda (unless the buttermilk should be quite sour, in which case add a little more); stir in two handfuls of cornmeal, making a very thin batter; grease your pan well, pour in the batter, and bake it until it ceases to boil and gets nicely browned.

LEMON CREAM.—Boil the thin peel of two lemons in one pint of cream, strain and thicken with the well-beaten yolks of three and the whites of four eggs, into which half a teaspoon of white sugar has been beaten. Add half a teaspoon of salt, stir rapidly with the egg beater until nearly cold, and pour it into glasses or cups. This quantity will fill six good-sized cups.

BLACK CAKE.—Two cups of brown sugar, $1\frac{1}{2}$ cups of butter, six eggs, beaten separately, three cups of flour (brown the flour), two table-spoonfuls of molasses, one of cinnamon, one teaspoonful of mace, one of cloves, two cups of sweet milk, two pounds of raisins, two of currants, half pound of citron, one teaspoonful of soda, two of cream of tartar. Bake three hours,

The Week.

The southern counties are now pushing their splendid orange crop upon the market vigorously. There will be a larger amount of produce than ever before, and it is noted in San Francisco that the quality of the oranges sent here averages much higher than heretofore. Such improvement may be expected to continue, for each year, new trees of improved varieties are coming into bearing; old neglected orchards near the larger towns are being swept away by the house-builders and the scale-bugs. One southern authority estimates that there will be a trainload of oranges sent eastward daily for the next three months. The California orange is winning wider favor each year and is certainly one of our most promising fruits.

The coming event of March 4th casts its shadow before. The incoming President, Gen. Harrison, has reached Washington; the telegraph has brought descriptions of the dresses which Mrs. Harrison and her attendant ladies will wear. President and Mrs. Cleveland have invited their successors to dinner and promise to have their trunks packed to move out in time. The country has everything all set for the inauguration and need but await the coming of next Monday to enjoy the event.

The Season.

The engrossing topic for the last month has been the character of the season. After two years of very moderate rainfall the opening of the present crop-year, with unusually full fall rains, led people to think that a change was to be experienced, and that an old-fashioned year with copious rains, early and free growth of feed and grain, was to be given to California. After such a beginning a long dry spell, although it actually accomplished no great harm, was quite a disappointment, and the mind, always prone to rush from one extreme to the other, quickly passed from exultation to apprehension.

From all our advices from the country and such observations as we were able to secure by hurried trips into parts of the interior, it did not appear that crops were actually suffering, although growth was considerably less than expectation had painted it. The grain, however, seemed to be rooting well, and generally showed a color indicative of strength and vigor. Most soils were plowing well and there was plenty of confidence in the country—more perhaps than in the city, where considerable noise was made about drouth by those who are prone to croak, and by others who desired to elevate the price of something they held in store.

This was about the state of the case when the rain began falling on Saturday afternoon, Feb. 23d. The rain was welcome and was hailed as the dissolution of the doubts which had prevailed. The storm was not as great as was expected, though in some parts of the State, especially at the South, it yielded quite a respectable amount of water. The following table gives the rainfall for the storm and season at various points, the data being selected from reports furnished by the weather bureau of the Southern Pacific railway:

A study of this table shows that this year's rainfall is not on the average greater than last year; that though slightly greater in some parts, it is slightly less in others. Last year the rainfall was notably short and the output of some counties was reduced below a normal amount. Thus far there does not seem to be a much better outlook for the present year, and the rains of last week, grateful as they were, do not put the situation out of the region of uncertainties. The future will decide the question. Nothing is now suffering; on the other hand, everything so far as we know is in a promising condition and will endure for some time without injury, but the making of a crop depends upon the rains of March and April. If they are adequate, we have the chance of a year of unusually large production. If we should have but scant showers, the result would be another year of partial returns. It becomes the wise to adopt a conservative course until the clouds declare definitely their intentions.

Jottings in Sutter County.

A recent visit to the farms along the west bank of Feather river, in Sutter county, gave us much pleasure because of the indications of prosperity and promise which were discernible on every hand. In our riding about in the district we had the advantage of the company of such well-informed and progressive citizens as R. C. Kells, H. P. Stabler, George Ohleyer, B. F. Walton and Joseph Phillips, and were thus enabled to use both eyes and ears to advantage in informing ourselves on the past, present and future of the country.

For beauty of situation and environment it would be hard to find a spot in California more calculated to attract the visitor or satisfy the resident than the rich plain which constitutes a great part of the area of Sutter county. The land lies splendidly for cultivation by the aid of the speediest and most effective machinery, and the chance for monotony by the prevalence of grades which depart but slightly from the level is wholly removed by the presence of river, hill and mountain which are adjacent. The snow-capped Sierra, the ruddy foothills, the blue Coast Range, are all within easy seeing, and these features of the landscape which are common to most valley situations are here but the setting for that most magnificent piece of nature's landscape gardening, the Marysville Buttes. Prof. Hilgard describes the Buttes as a ragged volcanic mass appearing in mid-valley and forming a prominent landmark on the plain. The Buttes with their foothills occupy an area of about four miles by eight, and the bare disrupted rocks and precipices of the central masses contrast oddly with the fertile plains around. The highest point of the Marysville Buttes, as determined by Prof. Davidson, is 2112 feet above sea-level. This data, however, though of interest, conveys no idea of the distinctive beauty of the Buttes as a feature of the landscape. Their sharp uprising the variety of outline in the pinnacles which they uplift, the play of colors on their rocky sides from sunrise to sunset, the dashing of storm-clouds against their sides, the royal supremacy of their crests over drifting fogs, and their occasional capture by the snow king, all would endear the Buttes to us as they no doubt do to the nature-lovers among the residents. If we were building in the neighborhood we should give the architect a puzzle in requiring him to open every window upon the Buttes, and we should add several dollars to the acre for lands from which the best views of the masses were attainable.

One cannot go abroad in the district which we have named without getting evidence that the spirit of enterprise and progress is at work. Those who have known the country need not be told that this spirit has sprung up with new vigor since the lands have been brought out from under the immediate shadow of the debris evil. The river-bottom is of course a scene of desolation and the vestiges of early settlement nearly buried beneath the rubbish sent down by the miners, but the rich plains are rescued by magnificent levees, and the law and the courts now stand as protectors of the beautiful valley from further encroachment. The dark days are past, and the residents are proceeding to improve and develop their properties which they have practically re-purchased by the cost of leveeing and the expense of prolonged contention for justice between conflicting industrial interests.

The very short time we could give to our visit prevented us from seeing more of Yuba county than could be gained from an early morning stroll through Marysville. We could see, however, the new life of the surrounding country reflected in the prosperity and progress of the market town. Most satisfactory improvements are now being made in Marysville. The streets by their firm road-beds and stone sidewalks, as well as by the size and style of the newer buildings, are assuming a metropolitan aspect. One of the structures now in construction we had the pleasure of examining. It is to be occupied by White, Cooley & Cutts with a large stock of implements and hardware, and by the Sutter County Fruit Co. to accommodate their rapidly growing trade in fruit products and supplies for fruit-growers. Other important structures we should have doubtless discovered had our time permitted. We had a pleasant chat with W. A. Lawson, editor of the Marysville Appeal. His zeal and

intelligence in industrial matters are proving of great value to the region.

Crossing the Feather river to Yuba City, we found signs of activity and progress everywhere. Many public and private buildings are being constructed. A new railway is now being rapidly extended southward. It is an extension of the Marysville & Oroville road, and is apparently being constructed in a most substantial manner, and of the best materials, and will be of immense value in bringing the products and travel of the upper valley and foothills directly to tide-water. Being adjacent to the great area of young and old orchards south of Yuba City, the new road is regarded with deep interest by the fruit-growers. Among the other institutions of Yuba City which we had the pleasure of visiting was the cannery, which, under the superintendence of J. J. Pratt, is winning such an excellent reputation for fine products. We found the buildings well planned and fitted up. A spur from the new road will enter the cannery grounds and a new warehouse will be built before another season's pack is ready for storage.

Of the orchards visited, space will not permit us to speak at length at this time. We have hope of visiting the region again during the fruit season. We can, however, assure any one who wishes to see a fine area of young orchard, thrifty and well cared for, that he should seek the country around Yuba City. Very low heading is practiced, and how trees can branch almost at the ground and still be shapely and easy of access by the plow and cultivator can be shown by acres of object lessons. Among the places visited were the large tract being planted for Mrs. Parks, to which allusion is made in our agricultural notes this week; the orchards of S. J. and H. P. Stabler, and the place of B. G. Stabler adjoining; the well-kept home of J. P. Onstott, who is making a profitable specialty of the Thompson seedless grape; the large and well-equipped farm of B. F. Walton, who farms for fruit and grain and dairy products, and has one of the largest and best establishments in the neighborhood; and the home place of the late esteemed Dr. S. R. Chandler, now in the hands of R. C. Kells, and being operated for fruit and fine stock, including horses and thoroughbred Holsteins. Thence we went southward, pausing for a few moments' chat with Squire Hull, and stopped for dinner under the hospitable roof at the famous Abbott & Phillips orchard, where we found the pioneer fruit-grower, Mr. Joseph Phillips, full of information and enthusiasm in the fruit interest, and with 416 acres of fruit to keep him out of mischief. Turning northward, we stopped a few moments at the Hock farm, the old country seat of Gen. Sutter, where we were very sorry to see that an inroad of hogs had girdled the grand old fig orchard, leaving scarcely a single tree to remind the future visitor of the beauty of the old grove beneath which thousands have been wont to gather on festive occasions. From the Hock farm we continued our ride toward Yuba City, passing many farms, among them the young orchard and new residence of Mr. Haus, which had a very neat and thrifty air. Near by was the new orchard of J. T. Bogue, well known to our fruit-growers. At the old Briggs place we saw a vast amount of improvement going on by the present owners, A. Lusk & Co. Crossing the levee, we traversed the famous old orchard, a sorry sight with its shroud of debris drawn closely about it. Efforts at reclamation by planting young trees where the debris layer is thinnest, are now in progress.

An organization which is doing much good work in the district is the Sutter County Horticultural Society. We had the pleasure of attending a meeting at which the subject of entomology in the public schools was under discussion. We are glad to note the general interest of the farmers in the introduction of this study as provided by law, and that the teachers of the county, many of whom were present, though protesting their lack of knowledge of the study, were well disposed to do the best they could in teaching it. In fact the introduction of entomology seemed to give a few conservative farmers more perplexity than it did the teachers themselves. The Sutter county superintendent, Dr. Lyman, and the teachers of the county, have, so far as we know, taken a more earnest hold upon the new topic than have the instructors of other counties. Their example is worthy of emulation.

The Government Irrigation Work.

Much interest naturally pertains to the proposed Government work for the irrigation of the arid regions. It is reported that the senators and representatives are besieged with letters of inquiry on the subject, which it is a great burden for them to answer. In order to anticipate such correspondence, Senator Stewart the other day furnished the following statement, which was telegraphed for publication on this coast:

For the purpose of investigating the extent to which the arid region of the United States can be redeemed by irrigation and the segregation of the irrigable lands in such arid region, and for the selection of sites for reservoirs and other hydraulic works necessary for the storage and utilization of water for irrigation, and the prevention of floods and overflows, and to make the necessary maps, including the pay of employees in the field and in the office, the cost of all instruments, apparatus and materials and all other necessary expenses connected therewith, the work to be performed by the Geological Survey, under the direction of the Secretary of the Interior, the sum of \$100,000, or so much thereof as may be necessary, and all lands which may hereafter be designated or selected by such surveys for sites, for reservoirs, ditches or canals for irrigation purposes, and all lands made susceptible of irrigation by such reservoirs, ditches or canals are from this time henceforth hereby reserved from sale as the property of the United States, and shall not be subject, after the passage of this Act, to entry, settlement or occupation until further provided by law; provided that the President may at any time in his discretion, by proclamation, open any portion or all of the lands reserved by this provision to settlement under the homestead laws.

As the bill passed the Senate, the reservation only extended to reservoir sites and rights of way for ditches and canals, but the bill was amended in the House so as to extend the reservation to all lands to be irrigated by the proposed hydraulic works. It will be observed that no title can now be acquired to either reservoir sites, rights of way for ditches or canals, or the lands susceptible of irrigation thereby unless the President shall open such lands to homestead settlement. It was not intended by the Senate to reserve anything but the reservoir sites and rights of way for ditches and canals, and this reservation ought to have been made years ago. The reservation of other lands by the amendment in the House is held by some to be wrong, but it seems to us that it is right to hold the lands to be benefited by public money for future disposition; otherwise the Government work is merely to benefit individual property.

For the purpose of proper legislation for a system of irrigation and disposition of irrigated lands, a select committee, consisting of Senators Stewart, Allison, Plumb, Hancock, Gorman, Reagan and Jones of Arkansas, has been appointed to visit the arid regions and report in December next the necessary legislation. An appropriation of \$250,000 has been made at this session of Congress to continue the explorations and surveys provided for in the law above quoted.

EXPERIENCE WITH THE OLIVE.—Col. Geo. F. Hooper of Sonoma, whose success in olive-growing and oil-making has proved so notable, was a welcome caller at the RURAL office a few days since. In his experiments at "Sobre Vista," the Colonel informs us that he has disposed of the black scale pretty effectually by keeping his olive trees properly pruned, and spraying them with a whale-oil soap and sulphur wash, at 120° to 128° Fahr., once in February or March and again in July or August. He follows this up in October or November with a soda solution, applied warm; and this, in connection with the subsequent rains, cleanses the trees. He tries to manage this treatment so as not to interfere with the buds. While he has high hopes for the future of the olive in Central California, he is not too sanguine nor impatient to bide his time, but has that faith in the industry which can await a normal and healthy development.

COCOANUT OIL.—Mr. John I. Tay of 729 Eleventh street, Oakland, brings us a very fine sample of cocoanut oil which he manufactured by a process he worked out himself during a recent visit in the South sea islands. The oil is a beautiful product, and Mr. Tay says it is excellent for culinary purposes, being a pure vegetable oil and possessed of a flavor which is very acceptable. It would seem that so pure and clear a product should commend itself commercially.

A Barn Plan for Hillside.

Mr. G. C. Pearson, an old Californian, who is now in exile in Illinois, finds some comfort in reading the RURAL PRESS as a reminder of his sojourn in this delightful clime, and noticed not long ago that another reader called for suggestions on the planning and construction of barns. As Mr. Pearson has recently built a barn in Danville, Illinois, he sent us sketches, from which the engravings on this page were prepared.

As appears in the pictures, the stable department of the structure is partly underground, the main entrance shown in the perspective opening to what is marked "main passage-way" in the ground plan. The basement is surrounded by a stone wall inside of a concrete wall. The thickness of both at the bottom is four feet, because of the existence of quicksand at the foundation. The wall narrows to 18 inches at the surface of the ground. The stone wall averages 13 feet in height, leaving the basement story 11 feet in the clear. In the basement are the

of which was set upon the stone basement. This studding gives strength and stiffens the building for carrying the shop-room above and the roof.

The perspective view shows the building at its highest point where the roof is 36 feet from the basement entrance. The opposite side is toward the house and lawn, and on that side there is but 22 feet elevation to be seen from the driveway. By this lay of the land, the barn having practically a great height, has its low side in view and is not as conspicuous as it would be if built on level ground. Mr. Pearson writes that he finds the barn to unite capacity and convenience with comfort of animals. The structure as shown is of course very plain and inexpensive; ornamentation may be added to suit the taste of the builder.

Viticultural Commission Approved.

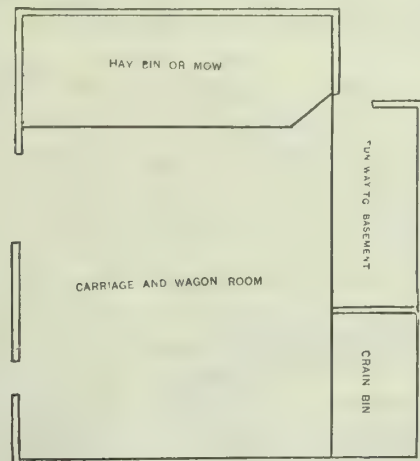

A meeting of grape-growers was held in this city Feb. 23d, which was largely attended.

DESIGN FOR BARN WITH ONE STORY AND BASEMENT.

BASEMENT PLAN.

FIRST FLOOR OF BARN.

stalls, which are deep and fitted so that putting up a bar behind makes the tying of the animals unnecessary—in fact they are really box stalls. The stalls face the hay-mow, and between the two is a passage-way three feet wide, which gives entrance and air. The stalls have chutes from the upper floor which carry down the hay and keep the eyes and coats of the animals free from seed and dust. There are also grain sprouts from the granary above, arranged to cut off as desired. The front parts of the stalls are dirt floored, the back parts planked. The mangers are placed as shown in the sketch.

A prominent feature in the design is the capacious hay storage which rises from the basement to the roof as marked in the plans. This mow is located in the east end of the barn where the surface ground is level and highest. The mow will hold eight tons of loose hay and is mostly filled by throwing the hay into the doors above. It falls and packs well until the level of the doors is reached, and the top is then filled by forking and mowing away above the inlet doors.

The first floor of the barn outside of the hay-mow is devoted to carriage room and granary. It is inclosed with rustic put on vertically, and held in place by studding, a light framework

After a full discussion of matters involved, the following resolutions were adopted:

Resolved, That, in the judgment of this association, no more fitting work could be undertaken in our behalf and in that of the vineyardists of this State which would conform strictly to the law than the establishment of the Wine Exchange and the employment of the lecturer, Miss Field, and other lecturers if necessary; and be it further

Resolved, That this association heartily recommends that the Legislature of the State not only continue the appropriation for the support of the Viticultural Commission, but also to add to the same sufficient to enable the commission to properly carry on the work just inaugurated.

The Pure-Milk Law.

The measure to fix a standard of pure milk for sale in California passed the Senate on Monday of this week. Whether it will go further at this late day in the session remains to be seen. The following is the full text of the bill as it passed the Senate:

An Act to prevent deception in the sale of dairy products and to preserve the public health. The bill as passed is as follows:

SECTION 1. The following standard is hereby established for pure and wholesome milk sold for domestic purposes, and for the use of infants and the sick and infirm, within the limits of the State of California: Specific gravity, 1.080 per cent; ash, .70 per cent; solids, not fats, 9 per cent; fat, 2.50 per cent; total solids, 11.50 per cent; water, 88.50 per

cent. And any milk sold or offered for sale as provided, which falls below this standard, is declared to be adulterated, impure, and unwholesome; and any person selling or offering for sale such adulterated, impure and unwholesome milk shall be guilty of a misdemeanor, and shall be punished for each offense by a fine of not less than twenty-five dollars nor more than two hundred dollars; or by imprisonment in the county jail for a term not less than one month nor more than three months or by both such fine and imprisonment.

SEC. 2. The Boards of Supervisors of counties and cities and counties, and the city or town Councils or other legislative bodies of all municipal corporations within the limits of this State, are hereby authorized, by ordinance, to provide for the analysis of milk sold within the limits of any county, or city and county, or of any municipal corporation in this State; and to provide also for the prosecution and punishment of all persons selling or offering to sell milk which, upon analysis as above provided, shall be found to be adulterated, impure and unwholesome.

SEC. 3. This Act shall take effect and be in force from and after its passage.

QUERIES AND REPLIES.

Bean-Growing.

EDITORS PRESS:—Mr. J. Pattison of Samson valley, San Diego county, wishes to get some information about growing beans.

As he is over 2000 feet above sea level, and 25 miles inland from the ocean, our mode of bean-growing may not exactly suit him.

We raise mostly the Lima bean, but nearly all kinds of beans grow well here near the coast.

We never use poles here for any kind of beans. Let them grow just as big and long vines as they wish and run where they please. We seldom find land too rich for beans, although they will grow on almost any of our soil, on hillside or in valley.

The soil must be well plowed and thoroughly tilled. The planting season is from March to June, but most of the planting is done in April and May. No irrigation is used.

Lima beans are planted mostly in rows, about four feet apart, two to four beans being dropped in places, 18 inches to three feet apart. Planting is mostly done with a planter, one or more rows at a time. They are cultivated well, until the beans begin to cover the ground enough to be in the way. Then, if weeds appear, they are pulled out or cut with the hoe.

Small white beans and the Mexican varieties are planted closer together and cultivated in same manner as Lima beans.

When the beans are mostly ripe they are cut or pulled, put in small piles, until dry enough to thrash.

Some thrash with a machine, others tramp them out with horses and wagons or disk harrows. The steam thrasher does the work more quickly, but has the fault of cracking and breaking the beans more or less.

Many carloads of Lima beans are grown here and beans have been the largest crop grown here for several years past.—O. N. CADWELL, Carpinteria, Santa Barbara Co.

The Cactus Hedge.

EDITORS PRESS:—I would like to obtain some information on growing cactus-hedge fence. It is being highly recommended by agents, who claim that after it is once introduced it will prove to be superior to any other fence known. Will it be likely to spread? How high will it grow? Will frost injure it and will it grow from the seed? A great many hereabouts are quite interested as to whether it is what is said for it or probably only a fraud or nuisance. Any information on the matter will be gladly accepted. Please answer through the columns of your valuable paper, of which I am an old subscriber.—WM. HAWES, Anderson, Shasta Co., Cal.

[We are aware that there has been something known as the "cactus-hedge" proposition in the air, and worked by agents for some time in different parts of the State. We have, however, no definite information upon which either to approve or condemn it. Probably some of our readers who have been approached on the subject, and possibly have planted such a hedge, can write us their experience and judgment of it. It will be a very safe proposition to go slow on it until more can be learned than is told by soliciting agents.—EDS. PRESS.]

Acknowledgments from an Inquirer.

EDITORS PRESS:—Will you have the kindness to allow me, through the medium of your valuable paper, to express my most sincere thanks to "G." of Vacaville for his courtesy and trouble in explaining to me, in such a very concise manner, the mode of handling peaches. I am sure many others must also feel deeply indebted to "G." for the valuable information he has so graciously imparted. GROWER.

San Jacinto, Feb 17, 1889.

PREVAILING ignorance on entomological subjects is startling. Even the *Wasp*, which we suppose claims to be a journal of intelligence, is permitting its artists to go abroad perpetrating wasps with two wings on its advertising signboards. And yet we have no State Entomologist.

Ask your friends who are not taking this paper to send for a sample copy.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

CARP AND TROUT.—Haywards Journal, Feb. 23: Otis Hill of San Lorenzo has a little paradise. We dropped in to see him Tuesday. Here are raised the earliest cherries, this spot being protected against wind by a chain of hills that extend along the foothills for several miles. We found oranges growing to perfection. Two varieties, the Mediterranean Sweet and St. Michael, were very tempting. But the great attraction was hidden under a monster willow tree—a large pond in which were thousands of carp. Throwing some bread on the water, Mr. Hill coaxed them to the surface, and the pond was fairly alive with them. Several were over two feet long, but the average size was about a foot and a half. He next invited us to see his speckled beauties, kept in a good-sized box at the head of a magnificent flow of water that issues out of the hillside. The water is clear as crystal, and the trout wild and healthful. They have been here four or five years. In answer to the question whether any fish are stolen, the owner replied that that is one of the greatest obstacles to the success of his carp-raising. He has lost a good number. Mr. Hill will excavate a more extensive breeding-place for the trout, adjoining the carp-pond, that will be 200 feet long and six feet deep. The stream has flowed out of the hillside since 1859, and is too valuable to be allowed to go to waste. He has just the spot for an extensive hatchery, the water being unequalled for the raising of carp and trout.

THE FIRST GREEN PEAS.—Manuel Marshall, who rents a portion of H. V. Momen's farm, once more takes the medal for shipping the first green peas to market, Wednesday, amounting to 300 pounds.

SUGAR AND WATER.—Among the few holders of property along the Alameda creek who are contesting the condemnation suits of the Spring Valley Water Co., which seeks to divert the water of the creek for the use of the S. F. public, is the Pacific Coast Sugar Co. The latter claims that for the past 19 years it has been engaged in manufacturing sugar from beets, having its plant at Alvarado, on the banks of the creek. The factory, with machinery, etc., is valued at \$250,000. The company has taken from the creek for the use of the factory a volume of water equal to about 200 miner's inches. The use of the same is absolutely necessary for manufacturing, and without it the factory would necessarily be abandoned, unless other water should be obtained at a great expense. No other can be obtained for the use of the factory so as to be profitable unless by the sinking of artesian wells, which would be experimental and problematical, with the chances largely against success. The present is the time for making contracts for the purchase of the present crop of beets, the crushing of which, if not prevented by the water company, will commence about Aug. 15, 1889, and about Feb. 15, 1890. If the beets are not purchased now, the run and operations of the factory will, for the present year, be lost, damaging the company to the extent of \$75,000. If the company does not purchase and contract for the stock, and is prevented by the pending action from crushing the same, the damage to the company will be enormous. If the water from the creek shall be diverted by the S. F. corporation, the company will sustain damages in the sum of \$325,000, which sum it asks as damages.

Butte.

AN ARTESIAN STRIKE.—Oroville Register: D. K. Perkins has been sinking an artesian well at Palermo that at a depth of 400 feet struck a stream which forced the water in the well up to within four feet of the top. The lower part of the well had no casing in, and Mr. Perkins believes that when this is in the water will flow over the top of the well. He did not stop at that depth, however, but kept on sinking.

LAWLESS TRAMPS.—Chico, Feb. 15: Last evening about 20 tramps arrived in Chico from the North and barricaded themselves in a barn, saying that they proposed running the town. The officers swore in a number of citizens as deputies and started in to arrest the gang, who resisted with clubs and stones. The officers pulled their revolvers and began firing on the tramps, who started to run. One, who gave his name as Dick Thompson, from Greeley, Col., was shot in the leg, and a number of others were severely handled by the officers before surrendering. The officers were hit by rocks, but not hurt much. The entire gang was jailed.

Colusa.

A CANNERY.—Sun: The Colusa Canning Co. has been organized, with a capital stock of \$30,000, and a sufficient amount of stock subscribed to insure its success. We have around here some of the finest orchard land in the world. Within a radius of 9 miles we have now some 1200 acres planted to fruit trees. With a cannery established, we will have planted, in the next two years, more than 5000 acres in the same radius, which will in a few years give employment to a great many men, women and children.

Fresno.

FANCY BUTCHERING.—Fresno Expositor: There are on exhibition in front of Furnish & Mickle's meat market the carcasses of four

dressed sheep, very artistically cut and scored on the back. On one is a portrait of George Washington on horseback. The features of the "Father of his Country" are excellent, while the horse's tail is done up in a Grecian knot. Beneath this is the square and compass of Masonry and the three links of Old Fellowship. Two of the carcasses are ornamented alike. They present the eagle, shield, ordnance, flag and star—in fact, the complete badge of the G. A. R. Beneath the insignia of the society is a handsomely cut wreath in the center of which are the letters "G. A. R." The proportions of the wreath are perfect, while the lettering is equally praiseworthy. On the fourth carcass is a representative of the defunct Fresno baseball club in the act of catching a ball. He has been in the position since yesterday, yet the ball hasn't reached his outstretched hands. The fingers are true to nature, and seldom in photograph or painting are they more realistically portrayed. The cutting and scoring was done by A. C. Blanchard. The fineness of the work is astonishing and attracts a great deal of attention. The carcasses will be photographed before being cut up. [By the courtesy of Bro. Ferguson of the Expositor, we have seen a photograph of the above-noticed mutton. The man who can achieve so delicate effects in a line so little given to esthetics, should cultivate his rare artistic talents.—EDS. PRESS.]

Lassen.

BLACKLEG ON MADEIRA PLAINS.—Alturas New Era, Feb. 22: J. T. Booth is feeding several hundred head of beef cattle, belonging to Mat Healey, on the Bergetrom ranch, South Fork. Healey has recently turned a large number of beaver back upon the range. Mr. Booth reports the death of several calves and yearlings from "blackleg." He says the disease kills the young, but does not seriously affect old stock. It usually attacks the calves in one of the legs, which becomes black and jelly-like; when the calf attempts to walk the foot of the diseased leg turns under and backward. The calf walks around but little. Death ends its sufferings within a few days. A number of cattlemen in Modoc are losing stock from the effects of the same disease.

Monterey.

HORSES SOLD.—Salinas Democrat, Feb. 23: Last Saturday James Storm sold seven head of fine horses, all of his own breeding, to the Overland Transfer Co. of S. F. for \$1975, or an average of \$282 each. Three of the number were Norman draft horses, four and seven years old; they brought \$825. Two were sorrel driving horses (the span that Mr. Storm generally drove himself); they were four and eight years old and brought \$700. The remaining two were draft horses, four years old, and brought \$450. Mr. Storm considers the breeding of horses profitable, if properly managed. There is a ready market for all the good horses raised.

Napa.

ANTICIPATING THE FAIR.—Napa Register: A. H. Conkling, Sec'y of Napa Agricultural Society, has received a letter from F. H. Burke of La Siesta ranch, Menlo Park, which shows that leading stockmen of the State are preparing to participate in our next fair. Says Mr. Burke: "I desire to make application now for stalls for my herd of Holstein cattle (winners of nearly all bull prizes and sweepstakes in California and Nevada); also for stalls for Polled Angus cattle and for Herefords. I shall require 24 stalls in all, with privilege of cooking for my own men in front of stalls, same as allowed at all county fairs and State Fair."

Sacramento.

RECLAMATION ON GRAND ISLAND.—Record-Union, Feb. 15: Since 1880 nothing has been done on Grand Island in the way of reclamation, owing to difficulties in collecting back taxes. The resident farmers have for years expressed themselves as willing to keep their levees up to any required standard at their own expense, if Williams & Bixler of S. F. would do likewise on their own lands. This body of land, comprising nearly 16,000 acres within the levees, lies between Steamboat slough and Old river, commencing just below Courtland and running nearly to Rio Vista. It already has a good levee on more than half its frontage, and only requires strengthening along the lower part of Steamboat slough, the cross levee and up Old river a short distance. With a substantial levee, for which there is plenty of the best material on hand, it would be one of the most valuable bodies of land in the State for fruit, dairy, grain or vegetables, and add materially to the wealth of Sacramento county. A meeting of all the land-owners was held at Mr. Hall's residence, and the result was that every land-owner having frontage on the river has signed an agreement to build his levee to the required height, giving it a slope of three feet to one on the inside, and where the most dangerous points are (on Williams & Bixler's lands), the levee is to be two feet higher than the flood of 1881, from Beaver slough down and up Old river. The work is to be finished by October 1, 1889, and will be done with dredgers and scrapers. J. W. Ferris, of Stockton, is to do the work on Williams & Bixler's land, and it is rumored that for compensation he is to get one-half the firm's interest on the island—some 5000 acres. Surveys have already been made, and the work may be said to have commenced. In addition to the levee being constructed, arrangements have also been made for drainage, so that the coming year of

1890 may find the greater portion of this fertile tract in cultivation.

San Diego.

BARLEY AND OLIVES AT FALL BROOK.—Union, Feb. 14: A. M. Peters, owner of the John Mitchell Farm, two miles from Fall Brook, from less than 100 trees bearing this season has about \$300 worth of olives, part of which have gone to Frank Kimball's olive-mill at National City. In addition to the olives, he has sold \$200 worth of cuttings from the same trees. These trees have just begun bearing well, the orchard not having had good care heretofore, and having suffered from rabbit depredations during its infancy. Fall Brook will have hundreds of these trees in bearing in a few years. Mr. Saxey reports a general yield of 20 sacks of barley per acre on his 80-acre farm, three miles south of town. As good land as his, adjoining his place, can be had at from \$25 to \$45 an acre.

SPRING FLOWERS.—San Diego Sun, Feb. 12: The orange-yellow poppies are blooming in the canyons about the city and will soon appear on the mesas and hillsides. Wild violets and forget-me-nots, spring beauties and buttercups, the pink blossom of the mazzanita and the white flower of the coffee bean have all made their appearance in riotous luxuriance on the highlands. By another month the hills and valleys will be gorgeous with color.

San Joaquin.

BUHACH, ETC.—Stockton Independent, Feb. 22: Articles of incorporation were filed yesterday of the Buhach Producing and Mfg Co., with headquarters at Stockton. The objects of the corporation are stated to be the buying, selling, leasing and re-leasing of land, to cultivate land for the production of cereals, the plant *Pyrethrum Cinerariaefolium*, trees and vines, and generally to test the capabilities of land for the growing of crops, to manufacture and purchase buhach and insect powder, to can and dry fruit, to manufacture wines and brandies and to sell the products. The capital stock is to be \$150,000, divided into 1500 shares, all of which have been subscribed. The directors named for the first year are J. M. Welsh, D. S. Rosenbaum, J. N. Furry, N. M. Orr and J. D. Peters. The first four named are set down as the owners of one share each of the value of \$100, and the remaining 1496 shares are credited to Mr. Peters.

Santa Barbara.

EDITORS PRESS:—November and December gave us over ten inches of rain. Since the 1st of January we have had no rain of any consequence, but clear, bright weather most of the time, with some light frosts on the lowlands. Volunteer grain, grass and weeds have a good, strong growth, but begin to look somewhat yellow in places. However, the crops have not suffered yet, and if the rain comes within a few weeks, the dry weather has been a good thing. Vegetation is only checked in growth—not yet injured. Plowing is almost all done for beans, corn and other spring crops. Alfalfa has made a fair growth, and several have out and cured their first crop. Fruit trees mostly dormant, except orange, which are blooming. As yet we have no reason to complain, and we look for plenty of rain to make us the best crops of various kinds ever grown in our little valley.—O. N. CADWELL, *Carpinteria*, Feb. 21, 1889.

Santa Cruz.

A FERTILIZER FROM THE SUGAR.—Transcript: A new fertilizer to this valley, and one said to be valuable, being paid for at the rate of \$4 per ton in Germany, is being distributed gratis to those who made contracts at the beet factory last season. About 20 tons of lime-rock were ground and used in clarifying the syrup. A plastic substance remained after the process which contains lime, potash, soda, carbonic acid and other ingredients of a soil-enriching nature. Ex-Judge Gaffey, who during the past season has planted on his ranch in the foothills 1000 apple trees of choice varieties, as well as a large number of prune and apricot trees and grapevines, is applying this fertilizer. He has also given the grass in front of his town residence a liberal coating of it.

Shasta.

IRRIGATION IN FALL RIVER VALLEY.—Mail: The farmers on Fall river between here and Kirke have under consideration a new scheme of irrigation and are figuring on the cost. The plan is to construct a dam across the river on the Bowman place. Piles will be driven, and to these planks will be spiked so as to raise the water three feet above its present level. That will flood all the land lying on the river and insure big crops of hay for all. The plan is certainly practicable, if piling can be driven.

Sutter.

CHOICE VARIETIES.—Farmer, Feb. 22: The 80-acre tract recently planted by the Sutter County Fruit Co. on the farm of Mrs. W. H. Park, near Yuba City, contains as choice a selection of trees as could be set out on a tract of that area. The different kinds have been selected with great care, and the number so proportioned that when the trees begin to bear the fruit can be handled with the least cost and placed on the market at a good profit. No trees are planted that are not the best variety and the fruit of which will not bring a ready market. Through the kindness of Mr. Kells we secured the list, as follows: 500 Royal apricots, 500 White Adriatic figs, 500 Commercial almonds, 500 IXL almonds, 500 Susquehanna peaches, 1000 Foster peaches, 1000 Salway peaches, 500 Alpha cling peaches, 500

Ulatia peaches, 500 Tragedy prunes, 200 Clyman prunes, 1000 Bartlett pears, 400 Albright cling peaches, 100 Bilyeu's Late October peaches, 150 Hale's Early peaches, 100 Day's Yellow Cling peaches.

Stanislaus.

BEAVERS ENTRAPPED.—Modesto News: The beavers are very bad in some localities along Tuolumne river, particularly where the land is well cultivated in fruits and vegetables. They have been very destructive at times on Isaac Ripperdan's bottom lands, gnawing down in one season as many as 80 fruit trees of bearing age, again digging up 18 or 20 hills of tall grown corn in a single night, and getting away with it all too. They have recently been thinned out on Mr. Ripperdan's place by the skill of an old trapper who has been camping on his premises for about two weeks. He during the past two weeks has captured 40 beavers and a coon, supplying S. F. with the skins. Uncle Isaac cordially gives up all his interests in the little animals, and hopes the trapper will continue his business.

Tulare.

THE LARGEST CARROT we have yet seen, says the Visalia Delta, comes from the nursery under the management of Thos. Jacobs and brother. It weighs 15 pounds after having the branching roots and tops cut away, and measures 23 1/2 inches in circumference. It is of the White Belgian variety and would make two liberal feeds for a healthy cow.

Yuba.

STALLION SHOW.—Wheatland Four Corners, Feb. 23: In response to our call for an exhibition of stallions in town on Saturday, the 16th, T. J. Whitney presented a five-year-old Hamilton, thoroughbred stallion, weighing 1170 pounds—a very fine animal, possessing all the points of a traveler. John Seward's Black Percheron stallion Limeville attracted considerable attention with his three colts, two of which belonged to A. W. Oakley. Mr. Seward's horse is jet black, excepting two white hind feet and a small star in forehead. He weighs 1950 pounds, and is graceful in action. Limeville was imported to the United States from France in 1883. His pedigree is recorded, Percheron Stud Book of France as well as in the Stud Book of America. Dan Smith presented two fine stallions, one full-blooded Percheron, and one part Percheron and part Black Hawk. One characteristic of the Percheron was a fine flowing mane, measuring six feet seven inches in length, so long in fact that it had to be tied up with ribbons to keep it from dragging on the ground. A. W. Oakley presented two fine three-year-old animals, tipping the beam as a team at 3000 pounds, sired by Mr. Seward's horse Limeville. Chas. Bennett presented a Clydesdale champion (449), a thoroughbred, imported by him this spring. The display was fully appreciated by the many farmers and stockmen who were in town.

MORE ORANGE TREES.—Marysville, Feb. 19: The Colmena Orange Association has signed a contract with Sacramento nurserymen for 8500 orange trees, of Florida production, to be planted at Colmena, on the C. & O. R. R., six miles south of this city. The tract to be planted in oranges this season is 100 acres in extent. About half the trees are to be seedlings, and the remainder budded stock, of which the larger portion will be Washington Navels. The stock in the association has all been taken, and the work of planting will begin at an early date. The trees are now on the way from Florida.

OREGON.

SUCKER CREEK VALLEY.—Cor. Grant's Pass Courier, Feb. 21: Six miles south of Kirbyville, Sucker creek connects with the Illinois river. On the east, within one-fourth mile of the mouth, Althouse creek empties into Sucker, both heading in the Siskiyou mountains. At an altitude of 2000 feet above this valley are many benches of land large enough to make good homes, the soil being a rich red; in this locality the Blackcap raspberry grows in luxuriant profusion, and each year finds the bushes well laden with the delicious fruit; the red and blue whortleberry grows to perfection; hops also yield good crops of fine quality. Below this, on the north side of the Sucker creek until it reaches the valley, is the best locality for the peach—the rich, red land sloping back to the north, where the mountains tower, is the reason, I think, why spring frosts do not injure the blossoms. There is no frost at any time of the year unless the wind is in the north, and at this date, Jan. 30, 1889, potatoes and other vegetables in open sheds have not been injured, and our coldest weather for the winter is past. Clover and other grass and grain are still growing nicely, although we have an occasional light frost at night. This is in what is commonly called the Sucker Creek valley, the "garden spot" of southern Josephine county. It consists of about 40 sections of land, a large part of which will yield good potatoes and other vegetables without irrigation, although nearly all the ranches have ditches from either the Sucker, Democrat or Althouse creeks. The soil is red sandy loam and red land, the latter yielding better vegetables with irrigation, but small grain does not require artificial wetting. Red clover and alfalfa yield better crops with proper irrigation. This locality is blessed by the above streams furnishing a large supply of water all summer, especially Sucker creek. There are over 20 ditches which take water out of Sucker creek, and still an abundance goes to waste.

31 Market Street, San Francisco.

The "San Jose" all Iron & Steel Frame CULTIVATOR.

We take pleasure in calling the attention of the Orchardists and Vineyardists of the Pacific slope to our NEW ORCHARD AND VINEYARD CULTIVATOR. The most complete and easily handled machine in existence. Weight, 335 pounds. The Cultivator is raised and lowered by means of a foot and hand lever, reducing the labor of handling to almost nothing.

It is the only Cultivator that can be handled successfully on a side hill. By means of the Shifting Pole the tendency to crawl down hill can be overcome. This feature is of advantage on level ground as well. The pole is shifted by the horses and can be checked at any angle by means of a foot lever. The Cultivator is increased from 7 to 9 teeth by sliding arms into a grooved casting in the ends of the frame. We lack space for a further description. WRITE FOR CIRCULARS. Address:

THE DAIRY.

Revolution in the Butter Trade.

(Written for the RURAL PRESS by J. R. F.)

The increase of creameries in the Central States has been a source of surprise even to those who had predicted for the industry a growth that would eventually revolutionize the manufacture of butter. The creameries which first gained public recognition were established in the Central States and have extended to the Middle and New England States. In the former they are generally run by individuals, either incorporated or under a firm name, while in the New England States they are run on the co-operative system, and have been found to net good profit to the farmer owning stock in them. On this coast but little is known concerning the New England creameries, but those in Iowa, Dakota, Michigan, Minnesota and other Central States are often referred to in private letters, and also by the press. This, no doubt, is due to the strong competition of the creamery butter from those States for the trade of this coast. So decided has this become that many dealers think it only a question of a short time when they will be introduced in the farmer communities on this coast. As for that, it is stated that one has already been started at Walla Walla, Washington, with the milk from 700 cows as a source of supply for cream.

So as to arrive at a better understanding of the business, the writer interviewed Mr. J. H. Hegler, of the firm of Hegler, Johnson & Co., who recently returned from a tour of the Central States, where he visited several of the leading creameries. Before entering into the subject he referred to our market, and stated that out of about 4400 barrels of brine butter sent into this city by the dairymen of the Pacific Coast, fully one-fifth is being carried over, while nearly two-fifths were sold below cost. This showing is a very serious matter to those engaged in the industry. During the past season the coast dairymen furnished us with 4378 barrels of brine butter, weighing 990,000 pounds, while the Central States sent to us 28,622 kegs of creamery butter, weighing 2,983,200 pounds, over three times more than our dairymen turned out to us in brine. But this is not the worst feature of the situation; for, while much of ours remains in stock for the want of a market, that of the creamery butter is about all placed. These are unpleasant figures to digest, but, nevertheless, they are true, and show that our coast dairymen must change their tactics or they will be in no better condition next season.

In regard to his visit and the result of his observations, Mr. Hegler stated that last summer he spent some four months visiting and studying the dairy interest of the Central States, where, up to five years ago, the butter made was sold at from five to ten cents a pound. It was made in dabs, and brought in by the farmer's wife to the town merchant in exchange for goods—no cash passing. When any of it found its way to this coast our people turned up their noses at it, and, except a few second-class bakers, or some poor sailor who could not get away from it, seldom found a consumer. But all this has been changed, for the entire country from Chicago westward to the borders of civilization, and north from the Ohio and Arkansas rivers to the Canadian line, has, within a few years, been transformed from a vast grain-growing to a dairy-farming district. Iowa and Minnesota, with their almost endless miles of prairie land, which at one time were, to a great extent, the wheat granary of the United States, now do not grow much more than enough to meet their home consumption, owing to the attention of farmers being turned toward the live-stock industry—cows for milk or beef, hogs and horses. The revolution in the farming industry has been brought about by the new and improved dairy machinery, making it possible for them to turn out cheaply an article of butter equal in every respect to the product of our best dairies.

Butter is no longer made in the kitchen by the industrious housewife at the odd times which she could steal from her household duties, but the milk is sold to creameries, whose owners establish skim-houses every few miles in each neighborhood. To these, surrounding farmers haul their milk, which is at once put through a cream separator, the farmers taking back the skim-milk for their hogs. The cream, perfectly fresh and of the finest quality, is taken immediately to the creamery situated at the nearest town, where the output of the skim-houses from the surrounding country is made into fine flavored, pure, rich butter. If the weather should at any time be too hot, ice, for cooling, is brought into use, which does the work as effectually as our cool climate. Butter made in this way does not go begging for buyers at six or ten cents a pound, but finds ready custom at from 15 to 40 cents a pound. The butter thus made is packed into tubs and put away in refrigerators, with which the creameries are provided. These refrigerators are simply a small room, with thick walls and close-fitting double doors. In the upper portion of these rooms ice is stored. From the refrigerators the butter is drawn, as required, for shipment to the distribution-points, or cities, in refrigerator cars, with which all first-class roads are now well provided, so that the temperature

of the butter while in transit remains uniform. On arrival at destination, if the market is depressed and prices do not warrant selling, it is taken from the cars and put into cold-storage warehouses, which is another new feature in the butter trade. In the latter it can be kept an indefinite period of time, and its fine flavor fully preserved.

Mr. Hegler says that for the first time in our history the overland railroads put on refrigerator cars for the transportation of creamery butter to this market from the Central States, which, together with cold storage in this city on a large scale, marks a new era in the trade here. And from this another unpleasant feature of our condition is that cold-storage butter is fast gaining on us in the Territories. For with railroads throughout the entire country, and refrigerator cars run in all directions, the product of the creameries is landed at the door of every dealer at a less price than we are willing to accept for our goods. The trade of the Pacific Slope naturally belongs to this city, and dealers have depended very largely on this trade to take off the surplus productions of our dairymen. Previous to the completion of the Northern Pacific railway and Oregon Short Line, the entire northwestern coast was supplied from this city, but now they only seek this city for supplies when dealers here meet the low prices for creamery butter.

Regarding the quality of California butter, Mr. Hegler says that it is much firmer than the creamery, and stands hot weather without melting to any remarkable degree, but not to such an extent as to withstand a summer trip across the desert, consequently it is shut out of all overland markets except when shipped in brine, but this adds to the cost. He believes from experience that the mode of marketing butter on this coast in rolls is superior to that of the tub in matter of convenience both to dealers and consumers, but he adds: "Let me enter my protest against the two pound roll that only weighs a pound and a half. Nothing but legislation can now regulate the matter, and I trust our law-makers will take the matter in hand."

In speaking of the advantages and disadvantages of our dairymen, Mr. Hegler says: "The cost of transportation is largely in our favor as long as the railroads charge two cents a pound freight on butter to this city, but then other features must be considered. California dairymen carry on their business on land worth from \$25 to \$75 an acre, while Western farmers conduct theirs on land worth from \$15 to \$30 an acre. In California a good average dairy cow is considered worth \$40, while \$25 is the average in Minnesota and Iowa, and still less in Nebraska. Thus our dairymen have at the start large odds to contend against in the matter of investment, interest, rent and taxes. Another item against them is that of farm labor. In the Central or Western States \$15 to \$20 a month, including board, is about the cost, while here, the same class of labor commands from \$25 to \$30 a month, including board. In the item of winter feeding the advantage lies with us, for while it is not so necessary here, in the Central States it is absolutely necessary; but while the cow is being fed she may also be giving milk, thereby making herself more than self-sustaining, and in the spring comes out of the barn in good condition if not beef-fat. In this State it is not the practice to house and feed cows except in a limited way, and by many not at all. But it is a question if this is true economy, for the reason that the stock is so exposed to privations that they come out in the spring so thin and weak that many die."

State Dairy Commissioner.

EDITORS PRESS:—I see that California is about to pass a bill creating the office of Dairy Commissioner. This is a good thing and a long step in the right direction; and it is gratifying to us of Wisconsin to hear that you are about to take your place in the line of dairy States.

Your location and natural resources entitle you to a place in the front rank. The high price of butter, cheese and milk, and the ease and cheapness with which green feed can be had the year round, are great things in favor of California becoming a great dairy State, and the office of Dairy Commissioner, if filled by the right man, will be worth millions of dollars to her farmers. You have that man in R. P. McGlinchey of San Jose. There is no man in the United States better posted in dairy matters, and no greater expert in judging of butter. He was for many years secretary of the Northwestern Dairymen's Association and president of the Elgin Dairy Board, which fixes the price of dairy products for the Northwest. No man has done more to advance the dairy interests of the Northwest than he has.

Dairymen of California should see that R. P. McGlinchey is their Dairy Commissioner, and the success of California as a dairy State and the prosperity of dairymen is assured.

Sparta, Wis.

A. T. FOSTER.

[It is true that a bill was introduced for the establishment of a dairy commissionership, but it does not seem to have emerged from committee yet, and it has very slim chances of ever getting out. Dairymen do not assert themselves in California as they do east of the Rockies.—EDS. PRESS.]

White Langshans.

California has the honor of originating and breeding, in its purity, the White Langshan fowl, an excellent illustration of which we present in this issue.

The Black Langshan, from which the white

pure white fowls, with all the well-known characteristics of the Black Langshans.

When hatched, they were of bluish color on their backs, with throat and breast white and canary, like their dusky brothers; their beaks, light-horn color; shanks, slaty blue, with pink between the toes and bottom of feet, in contrast with brilliant red combs, ear lobes and wattles. These, with the snowy plumage, make a combination of colors not known in any other breed, yet very attractive and refined.

Mr. Albee's White Langshans are beyond

She was of good size, vigorous and bore true Langshan characteristics in an eminent degree. Having no use for the hen, Mr. Keesling sold and transferred her to her proper place in Mr. Albee's yard of white "sports." Her influence added tone to his stock, and a good flock was raised during the season, greatly improved in vigor and size. Mr. Keesling, who is constantly importing Black Langshans, has recently received two lots of the white variety, and is breeding them.

Thus two strains of pure White Langshans

THE WHITE LANGSHAN AS BRED IN CALIFORNIA.

variety emanates, was bred in California as early as 1882 by Mr. O. J. Albee of Lawrence, he having obtained his stock of Blacks from Eastern breeders, and in 1883 obtained a pair from John Denny of Oregon, whose brother—Hon. O. N. Denny, U. S. Consul at Shanghai, China—at that time sent him.

In the summer of 1884, three pullets and one cockerel were hatched from eggs laid by his best Langshans, two of which developed into

question pure "sports," and carrying with them the well-known good qualities of the black variety, their merits are already proven. The pair of chicks hatched in 1884 were bred together, and with their progeny, with varying success for nearly four years, without introduction of new blood.

In February, 1888, Mr. H. G. Keesling of San Jose received from China, with an importation of Black Langshans, a pure white hen.

are established in California with well-authenticated records. Would-be fanciers of the breed need not be subject to the difficulties that beset and obscure the origin of many of the new breeds.

The Poultry Industry.

The sixteenth annual session of the New Jersey State Board of Agriculture was held at

Trenton during the last week of January. Many interesting papers were read and discussed. In one of these, on "The Poultry Interests of New Jersey," P. H. Jacobs said:

It has already been demonstrated that the poultry interests of New Jersey can be made to bring enormous wealth into the State. At Hamonton we now have about 40 broiler farms, on which young chicks are hatched, by artificial methods, and marketed before they are ten weeks old. Some of the operators have only town lots and not an adult fowl on the place. We have broiler establishments with a capacity as high as 5000 chicks every ten weeks, and the visitor finds the town almost given up in the winter season to poultry. The trains bring visitors from every section of the United States, and our town and State receive advertising from that source which is greater than may be supposed. Settlers are coming rapidly, and nearly all make poultry-raising their object. We have a total capacity of over 100,000 chicks every ten weeks, and if all the brooder-houses were placed in a line it is estimated that they would reach one mile. We have hundreds of incubators in operation, and only use hens for laying. Eggs are difficult to procure, owing to the demand. It is our practice to raise 100 chicks in the small space of 5x8 feet in the brooder-house, with a little yard of only 5x16 feet. Once in this yard the chicks never leave it, except to be sent to market. This is at the rate of as many as 32,000 chicks per acre every ten weeks, and it is actually being done. We have solved the problem of the meat supply. While the Western farmer requires from three to four years to mature his meat for market, devoting a great range to that purpose and exposing his herds to all the vicissitudes of the seasons, we work under shelter and produce a choicer kind of meat on less land and at better prices. While the farmers of our own State are giving up pastures to cows and selling milk at almost cost prices, we, with our light, sandy soil, unadapted to cereals or stock, are realizing larger profits from one acre than some farmers do in more favored sections on 100 acres. In the face of this fact, I ask if the poultry interests do not deserve the greatest consideration of this board. We also have a few poultry farms upon which as many as 1000 hens are kept. One operator is making arrangements to keep 6000 hens, while others are also contemplating the keeping of large numbers. This branch of the industry will be in connection with fruit-growing, the fowls serving as insect destroyers. To a certain extent they also manure the soil, and occupy no extra ground. In other words, it is a combination of two industries—raising poultry and growing fruit—that cannot fail to return large profits.

I wish particularly to call the attention of the board to an important matter, one that may add thousands (I may truly say millions) of dollars to the wealth of the State. It is to adopt some method of promoting the poultry industry. We believe we are in a fair way of organizing a State Poultry Association. With exhibitions at State and county fairs, and a yearly poultry show in the winter season, we can educate and encourage our people. I hope this board will at once take hold of this work. At the State and county fairs poultry receives but little encouragement. Yet the poultry department is always an attractive feature, and it should be encouraged in preference to anything else. The old hen could keep our learned professors at the State agricultural grounds busy with experiments, and with benefit to the people. Small as she is, she has more admirers than the horse, sheep, cow, or hog. She gains in numbers that which may be lost in size, and she has kept the wolf from the door of many families that have lost all by too much faith in larger stock. Yet the poultry industry is almost despised. Our agricultural reports are silent on poultry matters. Our experiment stations have given no time in that direction, and the farmers, as a class, are not even familiar with the different breeds.

It is time to begin anew and to reorganize this industry. More meat, more manure, more fruit and more money with less labor and capital, can be secured from less land by poultry raising than from anything known to farmers; and I believe that, if properly encouraged, the poultry industry will add as much wealth to our State as our manufactures.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

Silver Gray Dorkings.

The illustration here given of Silver Gray Dorkings is an excellent representation of that well-known breed. The Dorking is one of the oldest English breeds, and is the criterion of excellence as a table fowl. In the Silver Gray the color of the cock should be: Breast, pure black, tail and tail coverts, black, with metallic reflections, and the head, hackle, back and saddle feathers a pure silvery white, wing bow white, showing a brilliant bar of black. The hen's breast should be salmon color, shading to gray, head and neck silvery white, striped black, back silver gray, wings gray, tail dark gray.

The body should be deep and full, and the breast protuberant and plump; size, weight and form are highly regarded in judging Dorkings. The Silver Gray Dorking is a good layer and setter, and the chicks hardy and easily reared. Our Silver Gray Dorkings are large, handsome birds, and of good constitution. They have flesh-colored legs, and the fifth toe well developed, and they breed

SILVER GRAY DORKINGS AS BRED BY CUTTING & DORLAND, STOCKTON, CAL.

remarkably true. Cutting & Dorland have taken great pains in the selection of their Dorkings, and believe they have as good stock of this popular fowl as there is in the country, hav-

ing recently imported the fowls from Buffalo, N. Y. They have also imported and bred a lot of light and dark Brahma, Silver-Spangled Hamburg and White-Faced Black Spanish.

ALNEER BROS., Rockford, Ill.

Bogus Pedigrees Criminal.

Our live-stock interests have suffered somewhat in this State from bogus pedigrees, and dealers with active imaginations have no doubt sometimes furnished excellent lines of descent for some very ornery scrubs. There has also been some imposition practiced probably upon those furnishing certificates of registration. All such enterprises on the part of stock dealers are now criminal by the laws of this State. The following new section to be known as No. 1615 of the Penal Code has been passed by the Legislature and approved by the Governor:

Every person who shall, by any false or fraudulent pretense, obtain from any club, association, society, or company organized for the purpose of improving the breed of cattle, horses, sheep, swine, or other domestic animals, a certificate of registration of any animal in the herd register, or any other register of any such club, association, society, or company, or a transfer of any such registration, and any person who shall, for a legal consideration, give a false pedigree of any animal, with intent to mislead, shall be guilty of a misdemeanor.

Barbed-Wire Fences.

The following bill, adding a new section to the Penal Code, passed both branches of the State Legislature and has been signed by the Governor:

Section 593. Every person owning or having charge of, or control in behalf of, or acting for the owner of land adjoining a public highway, or street of an unincorporated town, who shall erect or maintain a barbed-wire fence along the line of said land adjoining the public highway, without placing in a substantial manner a board or rail not closer than three feet from the ground on such fence, equal in size and strength to a pine board six inches in width, one inch in thickness, and sixteen feet in length, shall be guilty of a misdemeanor.

This Act shall take effect one year after its passage.

California Fruit-Union Agencies.

The directors of the California Fruit Union met at the G. Ilen Egle hotel in Sacramento Feb. 21st to consider and appoint Eastern agents for the approaching fruit season. After a session lasting until 10 P. M., the *Record Union* says the same agents were selected as last year, and upon the same terms and conditions. This was done by a vote of five to four in the directory, the contest being the same as last year. Fruit is to be sold by auction at Chicago, New York and Boston, as last season. The agents for the Union are as follows: Chicago, Porter Bros.; New York, Sgobel & Day; Boston, Blake & Ripley; Omaha, Peyke Bros.; St. Louis, Garber & Co.; Kansas City, Loomis & Co.; St. Paul, Plesley & Co.; Minneapolis, Porter Brothers Company; and New Orleans, Macheca Brothers.

Vacaville Items.

EDITORS PRESS:—Rain commenced falling Saturday night and lasted until Sunday evening. About half an inch fell, and was very welcome, although it was needed more to ease people's feelings than anything else. The sky is still cloudy and it looks as if more rain would yet fall.

Fruit trees are blossoming out slowly, and the prospect for a large crop of fruit is now good.

People generally are pruning heavily this year. They want more peach and not so many peaches.

Vacaville, Feb. 25, 1889.

STALLIONS AT COTATE RANCHO.—Wilfred Page has issued a very neat folder giving the pedigrees of Mortimer and Eclectic, two standard-bred Electioneer stallions, which are now standing at Cotate ranch in the Santa Rosa valley, as advertised in the *RURAL*. Cotate ranch, as many readers of the *RURAL* already know, is a magnificent estate on the line of the S. F. & N. P. R. R. between Petaluma and Santa Rosa, and there is a station on the property called "Page's," but the postoffice is Penn's Grove, Sonoma county. Breeders of horses should address Mr. Page for his circular, which gives full particulars. The circular bears this forcible legend: "If you want a trotter, breed to a trotting-bred stallion, himself a trotter and whose every ancestor has produced trotters or the sires and dams of trotters." As they say in the classics: *verbum sap.*

SETH COOK, best known to our readers as proprietor of the famous stock-farm in Contra Costa county, died at the Palace hotel in this city on Tuesday morning, Feb. 26th, aged 59 years. Mr. Cook was largely interested in mining operations, whereby he had acquired considerable wealth. He was a native of New York State, whither his remains are to be carried for burial.

GRAPE-GROWERS' MEETING.—The annual meeting of the Grape-Growers' and Wine-Makers' Association of California, for the election of officers, etc., will be held at the rooms of the Viticultural Commission, Platt's hall, San Francisco, on the 5th day of March, 1889, at 11 o'clock A. M.—E. H. RIXFORD, Sec'y.

UMATILLA COUNTY, Oregon, pays \$1 bounty on coyote scalps.

Seeds, Plants and Implements.

Among the many catalogues now coming to us from seedsmen, florists, nurserymen and manufacturers, are several which deserve especial mention.

Nearest home are Trumbull, Reynolds & Allen of Kansas City, Mo., whose list includes not only field, garden, flower and tree seeds, but a varied assortment of agricultural tools, machines and vehicles.

John A. Salzer, La Crosse, Wis. (whose enormous potato cellars were depicted in the *RURAL* of Feb. 9th), has his 80 page quarto catalogue of plants and seeds profusely illustrated and brilliantly covered.

Alneer Bros., Rockford, Ill., issue a neat and modest pamphlet, well illustrated, of "everything for the flower and vegetable garden."

D. M. Ferry & Co. of Detroit, Mich., embellish their 321 Seed Annual with full-page colored plates of the "Early Puritan" cauliflower, Michigan Yellow Globe onion and a beautiful new sweet pea, "Miss Blanche Ferry."

Hill & Co. of Richmond, Indiana, send out their wholesale list for the spring of 1889 in plain black and white; but the fine engravings of roses, begonias, chrysanthemums, etc., render it very pleasing.

J. M. McCullough's Sons, Cincinnati, issue their annual seed catalogue in singularly tasteful style, with a handsome frontispiece, colored to nature, of "The Pines," the residence and trial grounds of Albert McCullough.

John Saul, the veteran nurseryman of Washington, D. C., publishes no less than eight catalogues, free to applicants, of which No. 6 is descriptive of "new, rare and beautiful plants."

On the quarterly wholesale list for florists and market gardeners, from Henry A. Dreer, Philadelphia, Pa., the "Eclipse" asparagus, claimed to be the largest and finest ever set out, holds the place of honor.

Ellwanger & Barry of the famous Mt. Hope nurseries, Rochester, N. Y., have so well established a reputation that their descriptive Catalogue of Select Roses for '89 seems to need no pictorial adornment.

Peter Henderson & Co.'s "Manual of Everything for the Garden" comes in quarto form, 150 pages, gorgeous with chromo-lithographs of fruits, flowers and vegetable novelties. (This catalogue is so costly to the publishers that a non customer sending for it to 35 Courtlandt street, N. Y., should inclose 25 cents in stamps.)

And all the way from Boston we have W. W. Rawson & Co.'s elegant quarto Hand-Book for the Vegetable and Flower Garden, illustrated in mezzotint.

A Handsome Recognition

The *Legal Adviser* of Feb 5th comes to us from Chicago with the following marked:

The *PACIFIC RURAL PRESS* is the name of a weekly journal published in San Francisco, Cal., a single copy of which accidentally found its way to us, and we were so much pleased with it that it is with pleasure we notice some of its merits. It seems to be pure in tone, candid and well informed in all matters of industrial interest, and appears to be a standard authority on all branches of California agriculture. Now that residents in the East are feeling so much interest in all that pertains to the locality in which this journal is published, we would recommend it as giving much valuable and reliable information on the subject. It is handsomely printed and illustrated and is first-class in every respect.

Thanks! If the *Adviser* advises as well in legal matters as it does in the paragraph just quoted, we do not wonder that it has entered upon its tenth volume and become the official paper of Cook county, Illinois.

SOME SWEET POTATOES.—Our friend S. T. Howell of Merced lately sent us a box of sweet potatoes, five of which together weighed 32 pounds, the largest one tipping the beam at 7 pounds 6 ounces. They have been viewed with wondering interest by many eyes. We can testify, from personal experience, that some of the smaller specimens were of excellent quality, and we do not know but the very biggest of the lot will prove just as good eating, if ever it is subjected to the culinary process. Mr. Howell mentions in the note accompanying his gift that his sweet potatoes yielded at the rate of 600 sacks—30 tons—to the acre. We believe it was he who last year sent the State Board of Trade three potatoes aggregating 40 pounds.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or of some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the *RURAL PRESS* are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

E. W. HALFORD, private secretary to the President-elect, receives 300 or 400 letters a day. These he reads, shows some of them to General Harrison, files a few and answers all of them.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING FEB. 12, 1889.

397,580.—HANDLE FOR CROSSCUT SAWS—M. Bennett, Eureka, Cal.

397,581.—ORE-WASHER—Henry G. Blasdel, S. F.

397,691.—FRUIT-PITTER—Briggs & Cavallaro, San Jose, Cal.

397,584.—TRACK-CLEARER—G. W. Cook, Mountain View, Cal.

397,542.—ORE-SEPARATOR—E. L. Giroux, Alhambra, Ogn.

397,551.—HAY OR GRAIN UNLOADER—Wm. G. Hunter, Traver, Cal.

397,753.—GOVERNOR FOR GAS ENGINES—D. S. Regan, S. F.

397,604.—BRICK MACHINE—J. Morhard, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Syracuse Chilled Plows

The growing demand for the implements of the Syracuse Chilled Plow Co. of Syracuse, N. Y., has made it necessary for them to increase their plant within the last year. They have added a new "Greene" engine of 400-horse power, and much machinery of the most modern designs, greatly augmenting their capacity for doing the finest work, in large quantities, and at the least expense.

They claim that the popularity of their plows is due largely to the fact that they are built to correspond with the conditions of the soil in which they are to be used. They make one line (in all sizes, from a small one-horse to a three-horse plow, in both right and left hand) that is particularly adapted to hard clay or very stony land. These will hang to the ground under all circumstances, and are recognized as the best plow on the market for hard-land work.

Another series of wood-beam plows—very much lighter in weight—is adapted to sandy or light loamy soil. This plow has a sloping landside, which tends to keep the clods and dirt from falling into the furrow, making the plowman's work much more comfortable and easy. This is made in all sizes, both right and left hand, and is very popular in the far West and South.

Their line of hillside plows embraces a vast variety, unsurpassed in working qualities, the sales of which are enormous.

Their sulky plows comprise the regular land-side sulky, in both right and left hand, and a reversible plow which does perfect work on either level land or side hill.

In addition to plows, they make all sorts of cultivating tools, including a spring-tooth harrow, which combines several unique improvements; steel frame cultivators, single and double shovel-plows and wing shovels. They are also sole manufacturers of the celebrated Chapman railway hay-pitching apparatus.

The policy of the Syracuse Chilled Plow Co. has always been to turn out none but the best goods, and by conscientiously adhering to this principle, they have established their present enviable reputation.

Their illustrated catalogue will be mailed free. Send for it!

WOMEN can now serve as school trustees in British Columbia incorporated towns and cities.

Herschel's Weather Table.

For Foretelling the Weather, Throughout All the Lunations of Each Year, Forever.

This table and the accompanying remarks are the result of many years' actual observation, the whole being constructed on a due consideration of the attraction of the Sun and Moon, in their several positions respecting the Earth, and will, by simple inspection, show the observer what kind of weather will most probably follow the entrance of the Moon into any of its quarters, and that so near the truth as to be seldom or never found to fail.

If the New Moon, First Quarter, Full Moon, or Last Quarter happens

IN SUMMER.

IN WINTER.

	IN SUMMER.	IN WINTER.
Between midnight and 2 o'clock.	Fair.	Frost unless wind Southwest.
" 2 and 4 morning	Cold and showers.	Snow and stormy.
" 4 and 6 "	Rain.	Rain.
" 6 and 8 "	Wind and rain.	Stormy.
" 8 and 10 "	Changeable.	Cold rain if wind West, snow if E. st.
" 10 and 12 "	Frequent showers.	Cold and high wind.
" 12 and 2 afternoon	Very rainy.	Snow or rain.
" 2 and 4 "	Changeable.	Fair and mild.
" 4 and 6 "	Fair.	Fair.
" 6 and 8 "	Fair if wind Northwest.	Fair and frosty if wind North or N. E.
" 8 and 10 "	Rainy if South or Southwest.	Rain or snow if South or Southwest.
" 10 and midnight.	Fair.	Fair and frosty.

OBSERVATIONS.—1. The nearer the time of the Moon's change, first quarter, full and last quarter are to midnight, the fairer will be the weather during the next seven days.

2. The space for this calculation occupies from ten at night till two next morning.

3. The nearer to midday or noon the phases of the moon happen, the more foul or wet weather may be expected during the next seven days.

4. The space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to the Summer, though they affect Spring and Autumn nearly in the same ratio.

5. The Moon's change, first quarter, full and last quarter, happening during six of the afternoon hours, i. e., from four to ten, may be followed by fair weather; but this is mostly dependent on the wind, as is noted in the table.

6. Though the weather, from a variety of irregular causes, is more uncertain in the latter part of Autumn, the whole of Winter and the beginning of Spring, yet in the main the above observations will apply to those periods also.

7. To prognosticate correctly, especially in those cases where the wind is concerned, the observer should be within sight of a good vane, where the four cardinal points of the heavens are correctly placed.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

(Full price \$1.).....50

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F.

In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired. Inform your neighbors about our offers and paper.

Mr. Wanamaker's Testimony.

There is too much impartial testimony as to the value of advertising to allow of the impeachment of the value of a newspaper's advice on the subject.

The words of John Wanamaker of Philadelphia ought to have weight with men engaged in mercantile business. He says: "I spend \$5000 a week in advertising, and I pay a skillful man—a former newspaper editor, and a good one—\$1000 a month to do it for me. I make money by it. Advertising is the leverage with which this store has been raised up. I do not see how any large and successful retail business can be done without liberal advertising. I advertise in every issue, except Sunday, of every daily paper in Philadelphia. Continuous advertising, like continuous work, is the most effective."

Now, what has been the experience of this man, to make him so appreciative of the value of printer's ink? Mr. Wanamaker began life without a cent to his name. His father was a bricklayer and he himself went into a clothing store as a clerk when he was 14 years old. From that humble beginning he worked himself up by dint of energy and enterprise until now he is proprietor of what is probably the largest retail store in the United States.—*Waterbury Republican*.

LAKE TAHOE is said to be ten inches lower than it was last fall.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

HORSES AND CATTLE

DENMAN & MCNEAR, Petaluma, importers and breeders of thoroughbred and graded Clydesdale horses.

SEASON OF 1889.

COOK STOCK FARM.

STEINWAY 1808.

Three-year-old; record, 2:25. Sire of Strathway, 3-year-old; record, 2:26. Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19; and 25 others with record better than 2:30, and the dams of 5 with records from 2:18 to 2:28.

First dam Abbees (dam of Solo, 2:28) by Albion, sire of Vanity Fair, 2:24, and of the dam of Favorite, 2:25; he by Halcorn, a son of Virginian. Second dam by Marshal Ney; he by Imp. Emancipation. Third dam by Bretrand, a son of Sir A. chy.

Steinway full brother to Solo, 2:28, and Soprano (the dam of C. F. Clay, 5-year-old stallion, record, 2:18; also Eminence, 4-year-old, record, 2:21, and Stockbrige, 2:28).

TERMS, \$100 for the season.

CRESCO 4908.

Full Brother to SPARTAN, 2:24.

Sired by Strathmore 408, sire of Santa Claus, 2:17; Tucker, 2:19; Skylight Pilot, 2:19, and 25 others with records better than 2:30, and of the dams of 5 with records from 2:18 to 2:28.

First dam Alla, record 2:32 (the dam of Spartan, 2:24), by Almost, sire of Fanny Witherspoon, 2:16; Piedmont, 2:17, and of the dams of J. T. Thompson, 2:17, and Catchfly, 2:18. Second dam (the dam of Henderson, 2:27) by Brignoli, a son Mambrius Chief, the sire of King Wilkes, 2:22, and Lady Turpin, 2:28. Third dam by Cripple, a son of Medoe (thoroughbred). Fourth dam by American Eclipse; he by Lucretia.

Strathmore by Rysdyk's Hambletonian, the sire of Dexter, 2:17, and of the dam of Trinkett, 2:24, and Tambouli, 2:14; Almost by Alexander's Abdallah, sire by Goldsmith Maid, 2:14.

First dam by Mambrius Chief, sire of Lady Thorn, 2:18, and sire of the dam of Director, 2:17. Second dam by Pilot Jr., sire of the dams of Maud S, 2:08, and Jay Eye See, 2:10.

TERMS, \$25 for the season.

CHARLES DERBY 4907.

2-year-old trial, 2:36.

Sired by Steinway (1808), record 2:25, the sire of Strathway, 3-year-old, record, 2:26, 6th best, 2:26.

First dam Katie G (the dam of H. K. Covey, 3-year-old trial, 2:27), by Electioneer, the sire of Massineta, 2:16, and of Solo, 2-year-old record, 2:18, and of eight others with records of 2:29 and better. Second dam Fanny Malone, record, 2:36, trial, 2:33, by Niagara (sire of Cobb, 2:31, double team record, 2:28), and of Lady Hoag, trial, 2:18. Said to be by Mambrius Chief, the sire of Lady Thorne, and of the dam of Director, 2:17. Third dam Fanny Wickham, record 2:43, by Imp. Herald (thoroughbred). Fourth dam by Imp. Trustee (thoroughbred).

CHARLES DERBY will be limited to 10 approved mares. Terms, \$100 for the season.

CLEVELAND BAY.

BARON HILTON.

No. 584 E. C. B. Stud Book.

Vol. 1, American C. B. S. B.

Winner of Sweepstakes at Golden Gate Fair, 1888, and Sweepstakes open to all breeds and ages at California State Fair, 1888.

Sired by Luck's All (189), First dam by Sportsman (291), Second dam by Luck's All (188), Third dam by Cardinal (47), Fourth dam by Emulator (103).

Baron Hilton is a grand, rich bay with black legs, a noble crest and carriage; is perfect in style and action and has proved himself a great breeder.

TERMS, \$25 for the season.

ROYAL STUDLEY.

No. 68, Vol. 1, A. C. B. S. B.

Foaled 1883.

Winner first premium Illinois State Fair, 1885; first at Contra Costa Fair, 1886; first at Sonoma County Fair, and first at the Sonoma, Marin and Napa, and Solano District Fairs, and second at Golden Gate Fair in "all work" cases, 1887, and first at Golden Gate and first at California State Fair, 1888.

Sired by Young Candidate, winner first premium at Gt. Yorkshire beating 20 others.

First dam Whalebone (365), first premium Gt. York-shire.

Second dam by Luck's All (188).

Third dam by Summercock (302).

Royal Studley is a very handsome, bright bay, 16 1/2 hands high, weight 1500 pounds, with superior style and action.

TERMS—\$25 for the season.

NAPOLEON 754, E. C. B. S. B.

Foaled 1885. Imported 1887.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 241; he by Master George 203; by King George 160; he by King George IV 163.

Napoleon is a fine, rich bay with black legs and very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Teesdale, and second premium at Bowes, Friesland, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERMS, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Benne's Stables, Martinez, or to Geary & Grindley's Stables, Hayward, will be forwarded to Farm Free of Charge.

Address:

COOK STOCK FARM,
DANVILLE, CAL.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Feb. 27, 1889.

Rains the past week caused a more hopeful feeling among dealers, and created more trading in some lines of produce, although the close money market, due to sending money out of the State, probably to avoid paying taxes on it, has an important influence on the markets. With the drawing back of or the returning of the money after next week, more activity is looked for in general trade. The wheat centers at the East and abroad have shown more firmness, with an advance reported abroad. The following is to-day's cablegram:

LIVERPOOL, Feb. 27.—Wheat—Steady. California spot lots, 7s 7d to 7s 10d; off coast, 39s; just shipped, 38s 9d; nearly due, 39s; cargoes off coast, stiff, on passage, demand for cargoes near at hand; Mark Lane wheat, improving; French country markets, turn dearer.

British Grain Trade.

LONDON, Feb. 25.—The *Mark Lane Express*, in its review of the grain trade for the past week, says: Last week in London the average price of English wheat fell to 31s, owing to the fact that the greater portion tendered by farmers was of poor quality. Deliveries do not improve. Foreign wheat is firmer, with a slight increase in business. Corn shows a tendency toward weakness. The retail inquiry for oats improved and there was an occasional advance of 3d. To-day the cold weather and moderate supplies improved the tone of the market. English wheat sold slowly at previous price. Flour is firm. Malt barley and malt are steady; new California, 40s 6d @ qr. Grinding barley is steady. New American corn is 3d lower; old is steady, closing weak. Oats are in fair retail request. Wheat and flour on passage to United Kingdom, 2,067,000 qrs.; wheat to Continent, 434,000. Imports of wheat into United Kingdom during the past week, 281,000 qrs.; flour, 208,000 bbls.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt:

	Feb.	Mar.	Apr.	May.	June.	July.
Thursday....	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4
Friday.....	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4
Saturday....	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4
Monday.....	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4
Tuesday....	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4	78 3/4

The following are the prices for California cargoes for off coast, nearly due and prompt shipments:

	O. C.	P. S.	N. D.	Market.
Thursday....	38 3/4	38 3/4	38 3/4	Firm.
Friday.....	38 3/4	38 3/4	38 3/4	Firm.
Saturday....	38 3/4	38 3/4	38 3/4	Firm.
Monday.....	38 3/4	38 3/4	38 3/4	Improving.
Tuesday....	38 3/4	38 3/4	38 3/4	Advancing.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York:

	Feb.	Mar.	Apr.	May.
Thursday.....	98 1/2	98 1/2	100	101 1/2
Friday.....	98 1/2	98 1/2	100	101 1/2
Saturday.....	98 1/2	98 1/2	100	101 1/2
Monday.....	98 1/2	98 1/2	100	101 1/2
Tuesday.....	98 1/2	98 1/2	100	101 1/2

The closing prices for wheat have been as follows, at Chicago:

	Feb.	Mar.	May.	July.
Thursday.....	100 1/2	100 1/2	100 1/2	98 1/2
Friday.....	100 1/2	100 1/2	100 1/2	98 1/2
Saturday.....	100 1/2	100 1/2	100 1/2	98 1/2
Monday.....	100 1/2	100 1/2	100 1/2	98 1/2
Tuesday.....	100 1/2	100 1/2	100 1/2	98 1/2

NEW YORK, Feb. 27.—Wheat—99c for cash, \$1.00 for May, \$1.00 for June and 96 3/4c for July.

CHICAGO, Feb. 27.—Wheat—\$1.04 1/2 for cash, \$1.07 1/2 @ 1.07 1/2 for May and 93 3/4c for July.

Eastern Wool Markets.

NEW YORK, Feb. 22.—Bradstreet's says of the wool market: There is only a light demand for wool in the various markets, owing to the fact that most of the large manufacturers are well stocked up. Prices, however, hold firm, and as supplies in dealers' hands are only light, with no prospect of renewing them before the new crop comes in, the whole position is decidedly stronger than it was a week ago. The volume of business has been quite up to the average during the week, with the demand mostly for domestic wools. Firm conditions abroad seem to have created a feeling of steadiness among the dealers in this market, and there are no signs of any break in prices for some time to come. Australian wools are firmer, and the high prices which have ruled at the London sales, which closed Tuesday, have strengthened the hands of holders there. Spot stocks are reported very light, but considerable shipments are coming to this country by sailing vessels from Melbourne. Territory wools are also in some request, but buyers are not disposed to go beyond immediate needs. Carpet wools are firm with only slight offerings. There is an improved demand for Western pulled wools, and supplies are coming in quite freely.

The situation at Philadelphia has not been changed in any important respect since last week. Manufacturers have bought sparingly and only for actual requirements, but most sales have been at unchanged prices, and holders, as a rule, manifest no disposition to quicken business at the expense of concessions unless it be on a few undesirable lots.

BOSTON, Feb. 22.—The market ruled rather quiet during the past week and sales do not foot up within about 500,000 lbs. as much as the previous week. While no change can be made in quotations, holders of domestic are less firm in their views and more disposed to make slight concessions, particularly on ordinary grades. Stocks, however, are comparatively small, and a few weeks of active business would clean out the market. No material decline in prices is expected, as the indications are that all available supplies will be wanted before the early new clip comes to hand. Michigan fleeces have been selling fairly, but not at the extreme prices obtained a week or two ago. Ohio fleeces held up pretty well. Sev-

eral lots of Territory wools have been closed out. Australian and other foreign wools, hold a strong position. Sales this week were 1,533,400 lbs.

Miscellaneous.

NEW YORK, Feb. 24.—Hops retain their noted strength. It is thought in trade that the local spring wants alone will support the present rates except the 22c rate for the best State quality, of which there is not enough above the 20c style to tempt any buyers. Common to prime new Eastern, 15@20c; black growths, 3@11c; Pacific, 14@21c; fair to choice of other grades, 6@14c.

Peeled peaches are neglected. Sales: 3000 cases Eastern unpeeled, 5 1/2c. Limas are steady at \$2.90.

BAGS—The rains have caused in some quarters a stronger feeling, but as yet the buying interest does not respond to it. Calcuttas, on spot, are quoted at 7 1/2 @ 7 3/4c, and for June-July delivery 7 1/2 @ 7 3/4c.

BARLEY—Crop prospects are reported to be of the very best, and with the usual spring rains the outlook, it is claimed, will be fully up to any previous season. In the sample market, prices show more or less irregularity, being governed from day to day by the disposition to press holdings on the market. For futures, trading has been only moderately fair. The following are to-day's Call Board sales:

Morning Session: Buyer season—100 tons, 85 1/4c; 500, 85 1/4c; 200, 85 1/4c; 100, 84 1/4c @ cty. Afternoon Session: Buyer 1889—100 tons, 94c. Buyer season—100 tons, 84c; 100, 84 1/4c; 100, 84 1/4c @ cty.

BUTTER—The market, which showed some signs of recovery, is in the "dumps" again, brought about by continued free receipts, a strong selling pressure and a restricted market. Bearing on this, an article appears elsewhere in to-day's paper.

CHEESE—The market is still weak, with buyers operating in a hand-to-mouth way.

EGGS—The market recovered some, shaded off again under free receipts, but at the close is again firmer under a good demand and only fair receipts.

FLOUR—The market is steadier, with a fair trade call ruling.

WHEAT—In the sample market trading has been fairly active, with more passing into exporters' hands, probably owing to an improvement in prices abroad. Rains the past week did more harm than good to the plant on summer-fallow land, but they have done much good to the late sown. As the larger proportion of the land seeded is summer-fallow, the damage will probably be more extended than now thought. Of necessity, this will largely depend on the spring rains. With the usual quantity the plant will go to straw at the expense of the grain, or, in other words, there will be a larger proportion of straw than of grain. In the speculative market trading was fairly active, with slight fluctuations in these movements. Owing to the corner that is being run in Chicago, that market has less of a controlling influence than does the New York market, although both exert quite an influence. The following are today's Call Board sales:

Morning Session: Buyer 1889—100 tons, \$1.51 1/2; 700, \$1.51; 200, \$1.51 1/2; 300, \$1.50 1/2; 500, \$1.50 1/2; 400, \$1.50 1/2; 400, \$1.50 1/2; 300, \$1.50 1/2; 500, \$1.50. Buyer season, 200 tons, \$1.48; 600, \$1.47 1/2; 100, \$1.47 1/2; 700, \$1.47 1/2 @ cty. Afternoon Session: Buyer 1889—900 tons, \$1.49 1/2; 300, \$1.49 1/2; 200, \$1.49 1/2; 900, \$1.49 1/2; 200, \$1.49. Buyer season—400 tons, \$1.46 1/2; 100, \$1.46 1/2; 500, \$1.46 1/2 @ cty.

[COMMUNICATED.]

Market Information.

Cereals.

The *Mark Lane Express*, Feb. 4th, says: The weather remains of a mild and open character over the greater portion of Western Europe, and, instead of normal winter conditions, such as have hitherto prevailed in the East, extending westward, there have been during the past week several signs of a mild period setting in throughout Central Europe, if indeed not in Russia itself. However, there yet remain a number of old-fashioned believers in a fine Candlemas being followed by severe weather, and in England we cannot well be sure that winter has left us until Easter be past. The growing wheat shows a good, even, and often a thick plant; under the influence of a springlike temperature it is coming on with a dangerous rapidity. The land is terribly heavy for spring plowing and seeding, and before the time comes when barley must be got in, it is greatly to be desired that frost should come to improve the condition of the soil. Wheat thrashings continue to take place on a larger scale than present low prices would seem to justify. The lightness of the new grain, as well as its softness and poor quality for milling, are, however, reasons why low prices must needs be accepted. The price of English wheat must, we fear, be quoted a shilling lower on the week at the chief markets. About a third of the exchanges only have admitted the decline, but the remaining two-thirds do not include a single market where any advance has been realized, and most of those which are quoted as unchanged are so only in the absence of enough business to test quotations. If millers were to come forward as free buyers at one shilling under quoted terms, there is scarcely a market where the offers would be refused. The depression is exceptional, and is the result of exceptional conditions of weather such as we do not experience in one season out of 20.

The local grain market was interrupted the past

week by a two-days' holiday. For wheat, the rest seemed to have done some good, notwithstanding a generous and general rainfall in the State, as the market on Monday opened stronger and fairly active in sympathy with a slightly better feeling abroad. The favorable influences on the European markets have been noted from time to time in this department, but the improvement in values is not as marked as it was expected it would be by this time, yet many look for a higher range within the next 60 days, based on the supply and demand. In our market, there is a quiet, stubborn bear element that is decidedly bent on keeping values down, and to accomplish its object, does not leave a stone unturned. Just now their favorite warfare is the promise of a large crop in this State. While this is true, the supply markets of the world will probably have less to spare, and the consumption in the demand markets will be larger. Aside from this, we will have a large increase in the supply of tonnage, owing to the light wheat crop in Australasia, forcing vessels in the Australia, China and European trade to come to this city for cargoes.

Barley the past week settled to lower figures, owing to the rains and improved prospects. There is a fair selling pressure, which causes more or less timidity on the part of buyers. The stock in this city is largely of the poorer grades, which necessarily have a depressing effect on the other feed grades. The rains, it is claimed, will so far improve the pasture as to lessen the consumption, which began to show signs of steadily improving. Choice grades of barley are not in overstock, and consequently show considerable firmness. The present outlook for the crop is very good.

Oats are without essential change. The general tone continues weak, owing to the reported heavy supplies up north that can be drawn from as occasion demands.

Corn is fairly steady. The feeling appears to be of an offish character, which will hardly be changed until the season is further advanced. The large supply in the corn belt east of the Rocky mountains naturally has a depressing influence with us. The consumption is only fair.

The rains of the past week are reported to have laid the larger proportion of the wheat plant on the summer-fallow land, but on the river bottoms and land lately seeded good will result. Mr. A. D. Logan, who probably is one of the best informed of the outlook in the counties of Colusa, Butte and Yuba, confirms the above and adds that with our usual spring rains the plant will be of too rank a growth and the return of grain not as large as it otherwise would have been.

Fruit.

Apples are growing scarcer, causing strong prices to rule.

Dealers in this city expect a heavy crop of berries, larger than last year. They also say that tree fruits promise a larger crop than last year. This opinion is based on more trees coming into bearing, and the weather being of the best for the orchards.

California limes are in limited supply, but Mexican are in heavy stock and only placed at low prices.

California lemons are in large supply and sell only at concessions.

Notwithstanding the receipts have been heavy, the market for oranges held up well. The consumption is not only large, but steadily growing. The shipments out of the city are quite free, chiefly up north. The supply of good to choice Navel has been quite liberal, but of seedless only fair. The heavy offerings of poor to fair are against the market, for hucksters and a large number of dealers take the poorer at the lower prices at which they are sold. It is claimed by a dealer here that Eastern buyers have operated quite freely at Riverside, causing many growers to advance their views, while another large dealer says that equally as good, if not better, prices are netted to the grower by selling in this market than at home. The market at the close appears to have a better tone.

In dried fruits, the market appears to be shaping into better position for the selling interest. Several large dealers realizing this, bought the past week for their spring trade. The stock here of the more choice is claimed to be light.

Raisins have been more inquired for, but buyers want concessions. The stock of choice is light, which creates, with the most of holders, a firmer feeling.

Feedstuff.

In ground feed, since the rain, the feeling does not appear to be so strong, due to the impression that the natural feed will improve. The output of the mills is not large.

Hay is steady with a fairly firm tone for the better grades, but the poorer are in buyers' favor. Free receipts by rail of consignments to be sold necessitates concessions, so as to save expense; this operates against the market. The consumption continues good.

Hops.

The *Mark Lane Express*, Feb. 4th, reports the English market as follows: During the last few days the feature of the hop trade has been an advance of 20s per cwt. on the Washington and Oregon hops, the demand for which is great. The stocks are almost exhausted, while orders have arrived to reship American hops to New York, and other parcels have been taken off the market to await instructions. Yearling Californian and American are now wanted. The advance noted last week on English hops is fully maintained, many of the most desirable qualities having gone into consumption during the past week. The demand to-day for all sorts is good, and the market has an upward tendency all round. A further serious decrease of the hop acreage in Mid Kent is reported, and there is a great deposit of aphid eggs on the plum trees. A short crop on a short acreage, with no stocks, would mean very extreme prices.

In the local market there is a stronger feeling, but trading is restricted, owing to the small obtainable supplies of the better grades.

Live-Stock.

Bullocks are selling for less money, although the more choice that cut up without wastage fetch outside quotations. Lambs are offering quite freely. Sheep are shading off, yet concessions are obtained with difficulty. Milch cows are fairly steady at from \$30 to \$45 per head for dairy. In horses there is nothing new to report.

The market for dressed cattle is quoted as follows to obtain the price on foot, take off from the

price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent:

HOGS—On foot, grain fed, 6 1/2 @ 6 3/4c @ lb.; dressed 9 1/2 @ 10c @ lb.; soft, 5 1/2 @ 6 1/4c @ lb.; dressed, 8 1/2 @ 9 1/2c @ lb. Stock hogs, 4 1/2 @ 5 1/2c @ lb.

BEEF—Stall fed, 6 1/2 @ 7 1/4c @ lb.; grass fed, extra 6 1/2 @ 6 3/4c @ lb.; first quality, 6 @ 6 1/2c @ lb.; second quality 4 1/2 @ 5 1/2c @ lb.; third quality, 3 1/2 @ 4 1/2c @ lb.

VEAL—Small, 8 @ 9c @ lb.; large, 7 @ 8c @ lb. MUTTON—Wethers, 6 1/2 @ 7c @ lb.; ewes, 6 1/2 @ 6 3/4c @ lb.; lamb, spring, 12 1/2 @ 15c @ lb.

Vegetables.

Garden truck continues to come in sparingly, but the outlook at present warrants the assertion that the output will be larger this spring than ever before, owing to more attention given to their cultivation. The peas that are coming in are not well filled, and consequently do not sell at as good prices. String beans come in slowly. Tomatoes still sell at high prices, owing to light receipts. Asparagus is coming in more freely.

Choice old potatoes have met with good sale the past week, the demand being for both local use and shipment. Poor qualities are hard to place except at concessions. New potatoes are coming in quite freely, with the quality showing a decided improvement. The demand is only for local consumption.

Choice, good-keeping onions are in light supply, causing good prices to obtain. Poor onions are hard to sell, except at low prices, and even then custom is slow.

Miscellaneous.

In poultry, young, well-conditioned fowls are wanted, but old are slow. The demand is about equal to the receipts.

Beans are reported to be unchanged. The supply of choice is steadily decreasing.

Considerable of a movement has taken place in nuts, particularly in almonds. The tone for the more choice appears to be stronger at the close. Honey and beeswax are essentially unchanged.

In seeds, alfalfa is fetching a slight advance.

From the *Commercial News* of Feb. 27th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	194,035	229,281
On the way to neighboring ports 47,658		88,788
In port, disengaged.....	33,308	41,152
In port, engaged for wheat....	42,230	45,796
Totals.....	317,231	405,017

To get the carrying capacity, add 26 per cent to the registered tons as given above.

From July 1st to Feb. 27th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.....	9,487,411	6,355,522
Flour, bbls.....	497,114	493,037
Barley, cts.....	1,223,287	442,395

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

BEANS AND PEAS.		Paper shell.....	12 @	13

The Aspinwall Potato Planter

SPECIAL ADVANTAGES:

No farming tool has ever done more accurate and rapid work, and we strongly question whether any implement (character of work and quantity being taken into consideration) has proven itself to be of such financial advantage to the farmer. We make strong claims for our Potato Planter, knowing that we can fulfill every one of them.

The cost of raising potatoes becomes greatly reduced by the use of our Planter, and to a potato-grower who raises much of an area the machine will pay for itself in a single season.

The Planter is capable of being adjusted to plant either cut or whole seed 10, 13, 15, 17, 21 and 26 inches apart; also, different depths, and shallow or deep covering can be practiced, as desired.

The distance of planting is exactly the same in each row.

The work is far superior to hand planting. The rows are straight, and, the furrows being V-shaped, the seed must necessarily be deposited in a perfect line; this enables close and early cultivation.

Please note the fact that dry or top earth is not drawn over the seed by the covers of our Planter, but, on the contrary, the moist or under earth is drawn upon the seed, a feature that every experienced potato-grower will appreciate, as nothing is more fatal than to cover cut seed in a dry time with dry earth.

The planting can be done from 3 to 9 inches in depth and the covering is uniform.

From 5 to 8 acres per day can be planted, and the entire work of marking, furrowing, dropping and covering is done in a single operation.

The Planter is well made and very durable, and with proper care will last many years.

There is no great strain on any of its parts, being entirely free from any cog gear and fast motion. The speed of the mechanism of the Planter is no faster than the movement of the ground wheel.

We give an absolute guarantee that our Planter will do all we claim for it.

A Fine Shorthorn.

We give herewith a striking likeness of a fine animal now standing at the head of one of the leading Shorthorn herds of California—that of P. S. Chiles of Davisville, Yolo county. Mr. Chiles is a strong advocate of Bates' blood, and holds to the doctrine that the greatest concentration of Bates' blood combined with due regard to the highest type of individual excellence, furnishes the safest standard for success—

high as \$5000, while it was not uncommon a few years ago to hear of sales of females from \$2000 to \$4000 each.

Kirklevington Oxford Count's sire was Kirklevington Duke 2d, a pure Bates of the favorite Kirklevington tribe; 2d sire, 8th Duke of Vine-wood, a pure Bates of the Cragg tribe; 3d sire, 2d Compton Lord Wild Eyes; 4th sire, The Baronet of Stevenson's Red Rose Princess tribe; 5th sire, Exported Lord Oxford, sire of the famous Lady Mary princesses, which sold

By Rail or Water.

At present the outlook does not seem favorable for much reduction in freight rates the coming season. The experience of the shippers of canned goods has been most disappointing. As we recently stated, they applied for a reduction so as to bring them somewhat nearer the rate which the Baltimore packers have to pay to get their goods to Chicago and other Western points. Of course they did not expect to

canned stuff into the Lake City market at a cost of 77 cents a hundred, exclusive of wharfage, insurance and other items.

Counting these extras and the time lost, the margin to be gained by sea shipment is small, but still we hope it may be wide enough to warrant the undertaking. It would be a very useful lesson to the railways, and in fact about the only style of argument they have any respect for. If the rails can be beaten without loss now, the effect on the coming season's

SHORTHORN BULL KIRKLEVINGTON OXFORD COUNT 36,723 OWNED BY P. S. CHILES, DAVISVILLE, CAL.

ful Shorthorn breeding. In his selection of breeding stock and in their management he has thus striven for the best descent and the highest individual quality and vigor, and has preserved these characteristics by refusing to incur the risks which attend pampering and effort for show points. He keeps his animals in good breeding condition and considers them, therefore, safe both for his own use and for his distant customers.

The bull at the head of the herd is Kirklevington Oxford Count, as already stated. He was bred by M. W. Anderson of Missouri and was calved Sept. 23, 1883. As the engraving shows, he is solid red, save the slight white marking, which the artist has shown. His dam is Wild Eyes Craggs 21, and he is rich in the blood of the celebrated Craggs family, of high value not only for its possession of most fashionable blood, but for its great worth in individual excellences. Bulls of this tribe have sold as

for over \$5000 each, etc. These few notes from the "long pedigree" of Kirklevington Oxford Count will serve to indicate his lines of descent, and to give extra significance to the fine view of the animal which the artist has secured.

Mr. Chiles has his herd well fortified on the side of the females. Four years ago he brought in two carloads of young cows from the East, consisting of members of the following well-known families: Rose of Sharon with top crosses of Craggs, Young Marys, Dulcibellas, Arabellas and others in like favor with Shorthorn breeders. These animals with their offspring comprise one of the most attractive collections to be found anywhere.

THE bill making train robbery a capital crime, introduced in the Legislature of Arizona by Louis Martin of Pima, was passed by both Houses and was signed by the Governor, making it a law in Arizona.

get very near to that rate, but hoped to be relieved from a rate which is almost prohibitory. Instead of gaining a concession they were paralyzed by an advance. Telegraphic advices from the East state that the telegraphic ballot taken by the 22 lines in the Transcontinental association on the request of the canned-fruit shippers of this city for a 90-cent rate on their commodity to all Eastern points, has resulted in a failure to agree on the proposition. The \$1.20 rate, which was threatened, has gone into effect, and about 300 carloads of canned fruit are locked up in this city.

The city holders of canned goods make a proposition which we sincerely hope they will successfully carry out, and that is to charter a ship and send the 300 carloads of fruit around the Horn. It is said that by this means of transportation the rate to New York would be about 55 cents a hundred, which, added to the 22-cent rail rate to Chicago, will put the

operations will be good, for the goods can be shipped earlier, or, what would be more probable, the rail rate would be dropped to get the trade.

CITY AND COUNTRY MEMBERS.—We notice that one critic on the existing Legislature says: "It is rather singular that it should be the rural communities which furnish the best educated, and that city members are, taken as a whole, behind them." It is rather late in the day to claim that residents of the country are ignorant. So far as California goes, we should expect to find the average rural intelligence higher than the average municipal. But leaving this wholly out of the question, it is not singular that the facts, so far as representatives in the Legislature are concerned, should appear as the critic notes them. The way primaries and elections are conducted in the city points clearly to the fact that the best men are not, as a rule, chosen as representatives.

HORTICULTURE.

Drying and Packing Peaches.

EDITORS PRESS: In the PRESS of Feb. 9th, "Grower" of San Jacinto, Cal., asks information as to the drying and packing of peaches, and being ever ready to assist those who have seen the folly of raising wheat and embarked in the culture of fruit, I will give the "Grower" the result of my experience and observation in drying and packing peaches.

I will consider, first, the treatment of what is known to the trade as "skin" peaches, as that kind is the easiest taken care of and bring a fairly good price.

Paper or Cloth Trays.

"Grower" says he has 20 acres of trees that will bear this year. The best way for him to proceed is this: Get lumber about 1 inch by 1 1/2 inches and saw it into lengths of, say 6 feet. Next, nail strips of same size lumber from one piece to the other, about three or four inches from either end. Nail strips of batting under the long pieces at intervals of about six inches. The best way I can illustrate this is by reference to a bed-frame and the slats. After your form of tray is made, cover it with heavy manilla or other coarse paper, or muslin, in the best way possible. Some fruitmen make their trays of pine or redwood shakes. This is ruinous, as all fruit dried on such trays absorb some of the pitch in the pine, or the peculiar odor of the redwood shake. The plan I have suggested of making "paper" or muslin trays is a slower way and probably more expensive than the manufacture of the shake tray, but the superiority of the paper tray over the shake article is apparent. The paper trays are lighter, and, again, do not give any smell to the fruit as pine or redwood trays do. This odor imparted by shake trays is one thing that lessens the price of dried fruit in foreign and domestic markets.

Boxes, Tables and Benches.

We will suppose now that the fruit is in boxes, ready for cutting. It is best to have the fruit in boxes holding 40 or 50 pounds, as they are easily handled, and the wages of "cutters" can be adjusted by the size of the boxes. If "Grower" has prospects of a large crop, and intends to go into the business for good, he might have tables made, like common kitchen tables, about seven feet long and three feet wide, or as wide as his trays. He should also have benches as long as his tables, say seven feet. Three girls or women can sit on each side of these tables and have room between them for the box of fruit they are to cut.

If he has cling peaches he should buy the regular spoon-shaped knives used in large canneries, but if he has free stones he can use the common shoemaker's knife. All fruitmen furnish knives for their cutters.

"Grower" must place the trays on the tables, have a "box-packer" for every 40 or 50 cutters, and two "tray-carriers" for the same number. The fruit is cut and laid "center up" on the trays, the halves not to touch each other. The stones are taken out, of course. When the trays are full, the "tray-carriers" take them off the tables, carry them to one side out of the way, and stack them up, one above the other, and put empty trays back on the tables.

"Grower" should have tickets of cardboard about 3 inches long by 1 1/2 wide, on which the numbers from 1 to 20 should be printed, leaving a space at the top for the "cutter's" name. He should provide the "box-carrier" before mentioned with a conductor's punch. When the cutter has cut a box of peaches, he punches out a number and throws the empty box to one side, so the cutter cannot "double up" on him. These "tickets" should be dated and handed in every night and new ones given out in the morning. At 10 cents a box the weekly wages of the cutter can be summed up every Saturday afternoon. Pay every Saturday night for the work done up to Friday night. This gives the "timekeeper" a chance to figure out, from the punches on the tickets, the wages of the cutter. Cutters are paid from Friday night of one week to the same night of the next week.

A Cutting Shed.

"Grower" should construct an open shed for as many tables as he wishes to have. There should be aisles between them about six feet wide, and at the end, of about two or three feet on the same principle as tables are arranged in a large dining-room. Near this shed he should build his "sweat-room." It should be about 25 feet square. It should have double walls, each as tight as possible. A space of six inches or more should be between the walls, to be filled with sawdust. This room should have a window and door, both of which could be fitted air-tight to their place, if wanted. The floor must be air-tight.

Sulphuring.

All fruit must be "sulphured" if it is to be dried. Sulphur bleaches it and kills any small insects that may be in it. Such insects are generally in the openings in the skin of the fruit. Air-tight boxes should be made about eight feet long, four feet wide, and four or five high. Have them air-tight by all means. Place two fruit-boxes on level ground and pile your trays on them, the boxes to be under each end of the trays. A space of about one foot should be between the top tray and the top of

the box when it is put down over the trays. Have a tin or sheet-iron pan about a foot in diameter with a rim an inch high, or rather two inches. Put a handful of fine shavings, or a small piece of paper crumpled up in the pan, and throw about an even double handful of good sulphur on your paper or shavings. Light the paper, shove your pan under the trays, and let the box down over the trays. Shove dirt all around the box where it rests on the ground to keep in the sulphur fumes. Be sure your sulphur burns. Leave the trays in the box about 10 minutes or 15, or even 20 minutes or more, if you are not rushed for time. Fifteen minutes is about the length of time to sulphur 12 or 14 trays of fruit. Have handles on one end of your sulphur box, that it may be easily lifted up on end. Use the best sulphur. Two good men can run six or eight sulphur-boxes. By the time they "make the round" the fruit is ready to take out.

Sun-Drying.

The best plan is to have a track and a car or two, to take the fruit to the ground on which it is to be dried. Lay the trays on the ground and the fruit will dry in two or three days, according to the heat of the sun. Leave them in the sun until the juice is all evaporated and until they are soft and yielding as raisins. Never let the fruit be left in the sun till it has become hard, or it can never be made as soft as it should be.

"Grower" had best engage a "yardman" who understands his business and trust to him. After the fruit has dried enough, scrape it from the trays into boxes and take it to the "sweat-room." Dump it on the floor in big piles and let it sweat until a quantity has been housed, say two or three tons, as it won't pay to fool with little lots every day or so.

Dipping and Packing.

Now as to packing. To do it quick and in a professional manner, "Grower" should have an iron kettle or tank holding 50 or 60 gallons. The best way is to heat the water in this kettle by steam from a boiler, admitting the steam through a pipe, entering at the bottom of his kettle. Have a stop-cock to control the steam. Have a sheet-iron bucket made to hold 40 or 50 pounds of dried fruit. Suspend a pulley over your kettle of hot water, attach a rope to your bucket and run it through the pulley, having it long enough to enable the dipper to use the other end of the rope. Your bucket must be perforated to permit the escape of the water when the fruit is dipped. Fill your bucket two-thirds full of the dried fruit from the sweat-room, submerge it in the boiling water, haul it out at once and dump it on tray, which can be carried away and stacked up in another part of the building.

"Grower" should have a "night crew," and this should be done at night, for by the next morning the fruit is just right to pack.

Facing.

On the tables of some of the "green fruit force," put the trays of the fruit dipped the night before. The girls then pick out the "facings." This is the best fruit obtainable in the lot. They should be the size of a silver dollar, a good "peachy" color and free from brown blisters, cuts, or warts. "Grower" should have his boxes made minus the bottom, that is, when the open side of the box is up, the label or box brand should be inverted, or upside down. The girls then put in the "papers." The first is generally common or good "news" paper cut in the form of a Maltese cross. It is for sale by paper houses. The "bottom" of the box and the sides are lined with this paper, then an advertising lithographed card about the size of the box is put in, and on the top of that is placed a sheet of oiled "tissue" paper. These papers are sold by the trade.

After these papers are in the box, the "facings" are put in, the outside down. Two layers of "facings" are put in, the top layer covering the holes between the "facings" of the bottom layer. The "boss" punches a ticket number for every "box of facings," and the boxes are taken to the

Weigher's Table.

This table is generally 10 feet long, with boards 1 foot wide around the edge. This table will accommodate four weighers. After the "facings" have been picked out of the trays of dried fruit, "carriers" take the trays and dump the picked-over fruit into the weighers' table. The weighers then put the requisite amount of fruit in the box on top of the "facings." The "pressman" puts a frame down over the box, places a damp "press board" on top of the fruit, and puts the whole thing under the press, comes "down on the handle," jerks the box out of the press, takes off the "boards" and the "form," and gives the box to the "first nailer." He nails the bottom on and turns the box over to the "second nailer," who strengthens the box all around by additional nailing. The box is then ready for branding. When the box is turned over and the "real top" taken off, the beauty of the carefully laid "facings" sells many a box. The plan of packing, peaches, apricots, pears and nectarines, is just the opposite of raisin-packing. In raisin-packing, as many know, the "filling" is put in first, then it is pressed, and the "facings" are then put on.

I have given just the manner of preparing the "skin" peaches, as they are called. "Peeled peaches" are prepared somewhat different, but the mode of preparing them I will give in another article. I have given details in this article for the benefit of "Grower" and

any others ignorant of the subject. I will be happy to answer any letters on the subject from any one. In such a limited space I cannot fully explain all things, and to those who enclose a stamped and addressed envelope I will make all points as plain as possible. [It would be more widely useful to have the answers published in the RURAL, and we can well give space to such a discussion.—EDS. PRESS]

Notes.

Make your cutters leave a space of six inches at each end of your trays so that no fruit will be shaken off in handling the trays.

Use 1x1 1/2 stuff in making the side pieces of your trays. Place the six-foot strips on their narrowest edge and nail your batting on the upper edge and stretch your muslin or paper over the batting. By following this out there will be a space of an inch or more under the trays when they are placed on the ground, which admits the free passage of the warm air under the trays. Again, in stacking the trays, the side strips rest on the tray beneath and prevent the mashing of the fruit. It would be well to nail a thin strip about an inch wide along the edge of the trays, to prevent the fruit from sliding off the sides.

If you build an open shed for your cutters to sit under, have it closed or shaded on the south and southwest sides to keep out the sun. Build your shed in a cool place and have cool water near, and a sufficient quantity of it, for during hot weather about one per cent of your female cutters will faint if they have the least chance. Heat, the excitement of talking, or a slight cut with a knife, will produce hysteria and fainting spells, and you must, to a certain extent, provide for such fainters.

Pay your sulphurmen \$2 a day, for their work is worth every cent of it and more. If you don't think so, try it yourself for a week. Pay your other men \$1.50 a day and your cutter 8 or 10 cents a box.

Your "ticket puncher" must be a person you can trust, for he really controls the wages of the cutters.

See that the man who distributes the boxes of fruit to the cutters is impartial to the last degree, for if a particular girl or woman is favored the rest become a howling mob.

Allow no squabbling or bickering, for, as a rule, all work ceases while such disputes last. Sun-dried fruit does not require turning, although some do turn it.

Do not shade fruit that is being dried in the sun, for it is put in the sun to dry.

Dried fruits sell best in 20 pound boxes; green, in about 40-pound boxes. Fancy "facings" are packed in paper-boxes known to the trade as "cartoons," weighing about one pound. These "cartoons" are embellished with much lace paper and gilt paper, and are the choicest "facings." They sell from 50 cents to \$1 for the pound boxes. These fancy facings are sometimes packed in boxes of 5 or 10 pounds, similar to the boxes in which "London Layer" or "Dehesa Cluster" raisins are packed. Every packer establishes his own size boxes, although 20-pound boxes are the most popular. "Grower" can buy boxes to hold 20 pounds at any box factory. Fruit should be picked before it is "mushy." Common sense will tell one when it is ripe.

Paring machines are used to peel pears. There is a patent machine now used that pares, slices and cores a pear in about 5 or 10 seconds. It resembles the common apple-parer and is worked the same.

Tulare, Cal.

J. OLIVER.

THE FIELD.

Steam Plowing in Yolo County.

The Woodland Mail has the following mention of the use of steam-power for farm work, as witnessed by a representative of that paper:

Friday morning we visited Grand Island and witnessed W. C. Curtis' revolutionary operations as a "tiller of the soil." It was by a delightful drive, through miles and miles of luxuriantly growing grain, that about midday we reached the tule lands of Grand Island, where Mr. Curtis was found gleefully watching his immense steam horse turning over the rich and virgin soil at the rate of 50 acres a day.

The body of land upon which the traction engine is at work consists of 5000 acres of tule land, which Mr. Curtis leases from Colonel George Hager of Colusa. It is located on the northeastern borders of the county, about 12 miles north of Cacheville. The land is under levee, but never a plow-furrow cut it until this year.

As one sees with what apparent ease the engine drags its four 12-inch 2-gang plows through the black adobe, interlaced with tule roots, the first wonder is that so small a motor is heavy enough to do the work. The engine, however, weighs nine tons, and with a 10x10 cylinder figures 25 horse power. The engine makes 160 revolutions per minute, which, by a system of cog-wheels, is reduced to 12 revolutions per minute of the drive-wheels. These are about six feet in diameter, with a tire two feet wide.

Imagine a large thrashing machine, with an immense locomotive cab built over the furnace-end of the boiler, mounted upon a ponderous truck, the hind wheels of which do the propelling and the forward and smaller wheels, under control of the engineer, do the steering, and

you have the traction engine in your mind's eye. The broad tires of the driving-wheels are clad with iron bars an inch thick every four inches, so that it is never necessary to throw "sand" in the track of this locomotive to keep its wheels from slipping. The length of engine over all is about 20 feet, and its train of four gang plows, attached one after the other, form one immense gang plow 80 feet wide and about 30 feet long. The speed attained is fully that of a fast horse walk at the plow, or about 2 1/2 miles per hour.

Mr. Curtis keeps the engine and its work going night and day by two shifts, the night force and the day force. The men eat their meals while plowing. In the night, strong lamps with reflectors, placed as headlights and rear lights, enable the work to go on without any hindrance whatever.

The engine's utmost speed would be 60 miles a day; but, of course, this makes no allowance for stoppages to take on fuel, water, etc. Under ordinary circumstances such delays reduce the distances traveled to about 50 miles in 24 hours. The eight 12-inch gangs cut a swath of eight feet or half a rod; so that for every mile the engine travels, it turns under a square acre of sod—thus accomplishing by a good day's run of 24 hours the plowing of 50 acres.

To do this same work in the same time, it would tax to the utmost endurance 64 head of good horses or mules; it requires eight and sometimes ten horses to manage one 12-inch gang in the tules.

The plowing executed by this steam-horse is first-class. The engineer has it under perfect control at all times, and with great ease runs his furrows as straight as a railroad survey. The engine holds the plow-beams so steady and firm that the plowing is very uniform and the sod is turned thoroughly to a depth of five inches.

The capacity of the boiler is three barrels of water, and when at work carries from 100 to 120 pounds of steam. The fuel consumed in 12 hours' run is 1 1/2 cords of willow wood. It is only partially seasoned, and to stimulate steam production a half barrel of crude petroleum, worth \$1, is burned with it on a daily average. With dry wood no petroleum would be needed.

The force of hands employed to run this traction engine is as follows:

	Daily Wages.
Engineer (day shift).....	\$2 50
Fireman.....	1 00
Water-hauler.....	1 00
Engineer (night shift).....	2 50
Fireman.....	1 00
Water-hauler.....	1 00

Total.....\$10 00

To this labor bill for the 24 hours should be added:

Cutting three cords of willow wood.....	\$3 00
One barrel petroleum.....	2 50
Keeping eight horses.....	4 00
Interest on \$4000 invested in engine, horses, wagons, etc.....	1 00
Board of seven laborers.....	3 50

Total.....\$14 00

Daily wages.....\$10 00

Other running expenses.....14 00

Total cost running steam plow 24 hours.....\$24 00

Thus it would appear that the running expense of this steam-plowing outfit is, approximately, \$1 per hour. It is safe to say that Mr. Curtis can easily plow 48 acres with his engine at the cost of running it. Making another simple reduction from these facts, we find that it is costing him 50 cents an acre to plow by steam. It should be remembered that this is the result of his test upon heavy tule land.

Supposing that Mr. Curtis were plowing 48 acres per day by mule and horse power, what would the figures be?

Wages of eight men.....	\$8 00
Keeping eight horse teams.....	32 00
Board of eight men.....	4 00
Interest on \$10,000 invested in stock, harness, gang-plows, etc.....	2 25
Blacksmithing, horse-shoeing, etc.....	1 75

Total.....\$48 00

If these figures are correct, it is proven that the cost of plowing by the old method is at least \$1 per acre, as against 50 cents per acre by the steam process.

In our estimate above the item of fuel includes only the cost of cutting the wood, \$1 per cord. As a matter of fact, he does not consider the wood out on the place an item of cost, but figuring the fuel at its market value, the total cost of his steam plowing per acre is not over 62 1/2 cents.

On the other hand, it is not believed that an average eight-horse team can get away with six acres of this new tule land per diem. A good authority informs us that five acres of such land is all that eight good mules can work, five inches deep, from daylight till dark. At this rate plowing by steam would cost Mr. Curtis \$1 20 per acre, making the difference still greater.

The wear and tear of machinery is not to be compared to the loss of stock that die or are crippled from natural and accidental causes, or are "stove up" from overwork.

Mr. Curtis has such faith in steam as against horseflesh that he is having built for this season's work two more traction engines. One, a 30-horse power, is finished and its arrival is expected daily. It will cost \$4000. As soon as it comes Mr. Curtis will harness it to six six-horse harrows and start it following up the steam plows. His third engine will be done by the middle of March next. It will be a magnificent machine of 50-horse power and will cost \$8000.

This engine is building expressly to drive or pull an immense Stockton combined harvester, also now being made to order for Mr. Curtis. This harvester will make a 40 foot cut, will thrash, clean and sack 1500 bags of wheat per day. It will be the largest combined harvester in the world. The immense engine to drive it will burn straw, which will be automatically carried from the cylinder of the thrasher, by draper, to the furnaces.

All these traction engines are so constructed that they may be used to plow or harrow, or run harvesters or haul grain to the shipping point. When pushed to their full capacity the three will do the work of at least 200 head of horses.

In a few days Mr. Curtis will have two traction engines and 125 head of horses preparing this tract of 5000 acres for seed. With a favorable season this land will produce from 25 to 30 sacks to the acre.

Mr. Curtis will seed this season 17,500 acres of land, besides summer-fallowing nearly 3000 acres. He sows Club, Sonora, Proper, and from 85 to 100 pounds to the acre.

With anything like a favorable season and market, his wheat crop of 1889 will sell for \$750,000 to \$800,000.

THE DAIRY.

Short-Weight Butter.

The discussion on short-weight butter rolls is always of interest to butter producers, and the following from the *Chronicle* shows the city aspect of the business. It should be clearly understood that the dairyman does not profit by the short weights; he sells his butter by the pound and he makes short-weight rolls simply and only because the city retailers will not buy full-weight rolls. As was said in the *RURAL* last week in the interview with Mr. Hegler, the matter has gone so far that only an Act of the Legislature can restore full weight to the butter rolls. The following is gossip and interesting:

How many of San Francisco housewives think that when they buy a "two-pound roll of butter" or a "ten pound pail of lard" they are getting what they pay for? Once in awhile some thrifty housekeeper tests a roll or two, and finding that it does not weigh by six or eight ounces what it pretends to, she descends in her wrath upon the meek and inoffensive corner groceryman and demands to know why these things are so. The smiling groceryman in a deprecating manner tells the irate customer that really it is no fault of his. Those rascally farmers are so intent on reaping a fraudulent profit that really it has come to such a pass that no more honest weight butter is packed. It is impossible, the retailer exclaims, to buy any full-weight butter in the market, and really the fault ought not to be laid at his door.

This is true enough so far as it goes. The country dairyman does not, it is true, pack any more full-weight butter. But the retailer, unfortunately, neglects to state that this is because there is no market for it. The honest groceryman cannot be persuaded into handling full-weight butter, and so the rolls have gone on decreasing in size until now there is frequently a loss of half a pound to each roll.

The attention of a *Chronicle* reporter was called to this matter by some complaints from people who had not lived in California long enough to become accustomed to the "bit" swindle and other impositions still practiced here. They have been exasperated a number of times by purchasing what purported to be two pounds of butter, only to find that the roll contained but a pound and a half or a little more, and they had been wondering why there had been no law passed to prevent such an imposition. They called to mind that functionary known as the "sealer of weights and measures," who visits stores in many of the Eastern States at unexpected times, and is empowered to confiscate all fraudulent weights and measures and short weight goods and to prosecute those who thus impose upon the public. They were surprised to learn that in this State no one stands between the consumer and the rapacity of the avaricious dealer, and were not slow in denouncing such a condition of affairs.

The reporter undertook an investigation of the matter, and certainly found enough to justify the wrath that had been shown. Several wholesale dealers were seen, and the same result was met everywhere. They were all unanimous in saying that the whole fault lay with the retailers. There was once a time when the dairymen packed their butter in full-weight rolls. Indeed, they would have been called swindlers had they not done so. The public was then educated to accept a roll being exactly two pounds.

But as time went on unscrupulous retailers saw a chance for an illegitimate profit, and there arose a demand for short-weight rolls. At first an ounce or two were cut off, but the custom has grown, until now much butter comes to market that is short half a pound to the roll, and there is a constant demand for butter that is from 15 to 20 per cent short. If a dairyman is so foolish as to risk to deal honestly and so packs his butter in exact two-pound rolls, he cannot sell it. Practically, there is no demand

from retailers for anything but the fraudulent butter.

The wholesalers point out that it is in no way to their interest to handle none but short-weight goods. They simply sell on commission or buy and sell by weight. The size of the roll cuts no figure in their transactions. Of course it is their business to meet the demand of the retailer, and if that individual wants short rolls the wholesaler must see that he gets them.

The reporter inspected a large number of boxes of butter that were on sale, and found that the number of rolls to the box was all the way from 50 to 65. The ordinary butter box is made to hold 50 full-weight rolls, and should weigh just 100 pounds net. But these boxes run from 86 to 102 pounds each and hold from 50 to 65 rolls. One box with 64 rolls weighed but 102 pounds, instead of the 128 pounds which it should have weighed.

It being manifestly unjust to condemn any one unheard, the retailers' side of the matter was sought for. It may, perhaps, be regarded as of an unconsciously humorous order, but it may be taken for what it is worth. They acknowledge that such a thing as a short-weight roll was not tolerated. The two-pound roll contained two pounds. But they claim that the consumers were dissatisfied and demanded a short-weight roll, and as a matter of course this demand had to be catered to.

A well-known retailer told this tale to the reporter in all seriousness:

The retailers claim that the consumer does not care so much about getting a full roll as he does about getting a roll of some kind for a small price. Hence, if one dealer sells a full two-pound roll for 50 cents, and the dealer on the next corner sells a roll that contains a pound and a half for 45 cents, the consumer rushes eagerly for the 45-cent roll.

The retailers claim that they practice no imposition in the matter. They say that they carefully refrain from claiming that the rolls contain two pounds, and they also claim that they grade their prices to correspond to the weights.

This explanation, however, hardly elucidates the fact that many retailers are anxious to get the lightest weight rolls obtainable. If they graded their prices by weight, it is difficult to explain the great anxiety to get as light weights as possible.

One retailer was asked if he did not consider it dishonest to charge the same price for a roll that weighed but a pound and a half as he did for one that was within an ounce or two of full weight. He was utterly unable to see anything at all out of the way in such a transaction. "It's a pure matter of business," he said. Of course there is no use of any further discussion on such a basis.

Finding that there was a disposition on the part of many retailers to throw the blame upon the shoulders of the producer, who is accused of not packing full-weight rolls, the *Chronicle* communicated with an experienced butter-maker of Monterey county and received some interesting information. This producer admits that no full-weight butter comes into the San Francisco market. Never under any circumstances does the producer use a full-weight mold for his butter, and the reason is simply because he could not sell the butter if he did. "If I packed my butter full weight," said the dairyman, "it would lie on the floor of the commission-house until the Angel Gabriel blows his horn before any retailer would buy it." The shorter the weight is the better the retailer likes it. Fifteen or 20 years ago all butter was put up in full-weight rolls. Each box held 50 rolls and netted 100 pounds to the box. Sometimes the boxes would overrun a pound or two, and this caused complaints from the retailers. They therefore demanded a reduction in the size of the rolls, and so the producers cut down the molds a little. This made the 50-pound box weigh 96 or 97 pounds. This pleased the retailers so well that it was not long before they demanded a still further reduction, until now from 60 to 65 rolls can be put into the same old 50-roll box. The producer referred to states that he has made a mathematical calculation, and finds that if the same ratio of reduction is continued for another 15 years the end of that period will find the roll of butter to consist of a little white rag six inches square.

The retailers claim that they never represent the rolls as containing full two pounds, but if they do not in terms claim so, that is the general understanding. And if a consumer asks for a pound of butter he is given just half a roll, no more, no less. A great many housekeepers, it is true, who have lived here for many years understand the matter, but newcomers do not, and certainly are justifiable in thinking themselves swindled upon getting but a pound and a half when they think they are getting two pounds of butter.

It is evident that the short-weight roll grew out of the desire to reap an excessive profit, and it is folly to charge that it was the demand of the consumer that brought about the all but general fraudulent roll of butter.

TWO SUNRISES A DAY.—Lundy, Mono county, according to one of our exchanges, has a double portion of sunrises. "Old Sol" does not pop into the canyon until 11 o'clock in the forenoon, and three hours later he hides himself again behind the hills, and seems to take a nap for an hour or two behind Mount Snowden, when he emerges for the second time, with a sleepy look, just long enough to say good-night."

THE GARDEN.

Lawn-Making in Oakland.

Oakland is a city of lawns. We have about 8000 houses in the town, and nearly, if not quite, half of them have a lawn, or at least a humble grass plot, in front of them. Some of these lawns are very extensive, but on a conservative estimate we may say that the Oakland lawn averages 30 feet front by 15 feet deep, giving a superficies of 450 feet. Then, if there are 4000 of these lawns, there must be an aggregate area of 1,800,000 square feet. Throw in the several small city parks, and we have a total area of green sward of over 50 acres.

Of course it requires an immense quantity of water to keep all this grass fresh and growing the year around. How great that quantity really is can be best appreciated when it is stated that the per capita consumption of water in Oakland is 235 gallons per day, when in most cities the consumption is from 30 to 100 gallons. In Washington, another city of lawns, the consumption is 170 gallons.

But not every Oakland lawn is a success; while some are fresh, smooth and velvety, others are shaggy and ill-conditioned and vex the hearts of their owners almost past endurance because they won't grow, in spite of all coaxing. To find out what is the matter with these sick-looking lawns—and the information is seasonable, for this is the time of year when most persons manure their lawns—a reporter sought out a florist and obtained the following interesting information from Mr. Seiberger of the Seventh-street nursery. Many people make a failure of their lawns because they begin wrong. They dig up their ground, dress it with stable manure, sow their blue-grass seed, and wait for the crop. The manure was full of seeds of weeds and alien grass, and they come up quite as soon as the grass seed does and continue to flourish. Much time is spent in weeding the lawn, but the wild grass is hard to eradicate and eventually it gets the upper hand of the blue grass. A better way to proceed is to spade up and pulverize the ground, manure it and then let it lie a couple of weeks. By that time the weeds will come up and can be hoed down, thus killing them, after which the grass seed can be planted to better advantage. This is the first point.

Then there are grave objections to spreading stable manure on lawns, because it is full of the seed of burr clover. It is better to use bone dust or some chemical compost—bone dust is the best fertilizer, however, because it has body to it and goes to the roots of the grass. The liquid portion of the stable dressing, which is its most valuable part, is quickly carried off by the wind. It is not a bad idea to strew rich earth instead of manure on the lawn, but when this is done the earth should first be thrown in a heap, watered and left to lie till the weeds come up and can be killed. A great deal is said about excessive watering of lawns, all of which is true, but as many or more lawns are spoiled in Oakland by mistakes made in trying to enrich them.

As to watering lawns, no absolute rule can be laid down, because soils differ in respect to the amount of water they will absorb. Generally people do not stop to inquire whether their lawn is on a bed of sand or a rich deep loam, and they water one as much as they do the other, though the loam needs only about a quarter as much water as the sandy soil. It is a mistake, however, to water any lawn every day. You see people who sprinkle their lawns, not because they need it, but from force of habit. They pull out their watches and say, "It's 4 o'clock and I must water the lawn;" or they do it because they see their neighbors doing the same. Twice a week, generally, is often enough to sprinkle; but it is better to water the lawn only when it needs it. You can tell when it is needed by the look of the grass. When it is dry it will look so. It has a yellowish, desiccated appearance. When it is sprinkled too often, on the other hand, the lawn loses that bluish-green tinge which it ought to have. Too frequent watering brings the roots close to the surface, and for that reason it is better to water less often but give it a good soaking when you do turn on the hose. Wet it down six inches.

Another error which people commit is planting shrubbery in their lawns, the roots of which run near the surface and sap the nutrition which should go to feed the grass. Look at a lawn upon which lilacs or syringas have been planted, and you will see that the grass around the shrubbery is yellow and dead looking. Rose-bushes do not so affect the grass, and palms and most other trees are all right; but if you want shrubbery, plant it in a corner where it will not interfere with your lawn.

The best lawn will not last forever. Blue grass degenerates; wild grasses invade the lawn, and it has a rough, shaggy look. In five or ten years the ordinary lawn runs out and needs to be renewed, though there are some lawns in Oakland a dozen years old which still look well. When a lawn has once degenerated, no amount of water and manure will bring it around, and the thing to do is to root it up, spade up the ground in the fall, let it lie till spring, enrich it and then start in afresh.—*Enquirer*.

THE STABLE.

A Famous California Horse.

A telegram has been received announcing the safe arrival of Anteeo at Louisville, Kentucky. This noble animal, on which so many Santa Rosas have looked with pride, a horse whose remarkable record has been closely connected with the history of our beautiful town, deserves more than a passing notice at this time. This is a fitting occasion to give a sketch of his history and to say something in regard to the promising colts in California of which he is the sire.

Anteeo's pedigree is too well known in this section to require the restating of it at length at this time. He is the fastest son of Governor Stanford's famous Electioneer, his dam being Joseph C. Simpson's Columbia, the only mare known to be the mother of two colts with a record of less than 2:20. He was foaled nine years ago.

Anteeo's record is 2:16½, that of his full brother, Antevolo, being 2:19½. It is a singular circumstance that these two noted brothers, after having been separated for years, should meet and make a trip across the continent in the same car.

Horsemen, generally, do not think Anteeo was properly managed in his training for the track. Many of them believe that he would have developed a truly phenomenal rate of speed if he had been differently managed. It is reported as having been a common thing for him to have trotted a quarter in 30 seconds, and, with proper training, it is believed by many that he could have been induced to crowd two minutes very closely.

Anteeo's progeny on this coast number about 200, many of which are very promising and they will be heard from in the future. As yet less than a half dozen of his colts have been handled for speed, but this has been with such gratifying results that many of his admirers predict that he will eventually surpass the fame of his most noted sire and be the greatest sire of fine horses in the world's history.

Anteeo was purchased by the Sonoma County Stock-Breeders' Association, and brought to Santa Rosa five years ago. The price paid for him was \$10,000, he being purchased from Jos. C. Simpson, who reared him. His fastest time, 2:16½, was made on the track here two years ago, in a race, since which time he has been kept for breeding purposes. Among his colts specially worthy of mention in this county we have learned of the following:

Redwood, 2:30½, owned by A. McFayden.
Alfred G, 2:31, owned by Mr. Guerne.
Anti-Coolie, near 2:30, owned by I. DeTurk.
Sunset, 2:36, at little training, owned by Guy E. Grosce.

Messrs. DeTurk, Wyman Murphy, Guerne & Murphy, J. H. Laughlin, T. J. Ludwig, and many other residents of this and adjoining counties have numbers of very promising colts sired by Anteeo.

And now this noted horse goes from the vine-clad hills of Sonoma county to the blue grass pastures of Kentucky. He is taken to the State noted for the finest horses in this country, to be used in improving the stock of that favored region. Kentucky brood mares are as fine as can be found in this or any other country. Good results will be confidently hoped for from this mixing of the best blood of California horses with the best in the State of Kentucky. Many tempting offers have been received for Anteeo, but his owners say that after a year or two he will be returned to Santa Rosa, unless these offers are materially raised. The large amount of \$20,000 and we believe \$25,000 has been refused for this animal. He has paid his purchase price several times over, the net profit from his management last year being over \$6000.—*Santa Rosa Republican*.

FASTING HORSES.—Doubtless it is the experiments of those fasting gentlemen, Dr. Tanner and M. Succi, that have led to experiments of short commons on horses. Trials have been quietly going on in some French fortresses, to ascertain how long artillery horses could hold out, when deprived of solid and liquid food; and of these two life-sustaining necessities, which was the more essential. It has been found that a horse can sustain life five times longer when not deprived of water than if deprived of all solid rations. A horse will not exist longer than five days if kept without water, though it may be abundantly supplied with solid food. Nor will a horse hold out if insufficiently furnished with water. It perishes because the stomach has been exhausted. In Algeria, where cavalry horses have to remain frequently two and three days during a campaign without water, they will, on arriving at the wells, ingurgitate 80 quarts in three minutes. Hence water, in the case of a siege, is more important than solid rations. With respect to the fasting men, the effects of starvation were less visible with those who imbibed water than with those who abstained. But death by inanition would arrive in due course, when corporeal energy succumbed. The explanation is facile; the liquid losses in the system take place in several manners; the diminution of the liquid part of the blood, in the case of inanition, renders the blood thick and viscous, thus blocking circulation, and so arresting the processes of nutrition.

PATRONS OF HUSBANDRY.

A New Grange at San Miguel.

MESSESS. EDITORS:—It affords me pleasure to report our success in establishing a Grange, P. of H., at San Miguel, consisting of 16 charter members. The meeting, as announced in your last week's edition, was held on the 1st inst., Worthy State Deputy J. V. Webster performing the ceremony, with the feeble assistance of your correspondent. The election of officers for the ensuing year resulted as follows: Rufus Fisk, M.; G. Webster, O.; Mrs. E. A. Fisk, L.; O. P. McFadden, S.; C. Forbes, A. S.; Mrs. J. J. Coyle, Chaplain; Capt. J. C. Currier, Treas.; Clark Hitt, Sec.; H. J. Schroeder, G. K.; Mrs. J. C. Currier, Ceres; Victoria I. McFadden, Pomona; Mrs. J. P. Nash, Flora; Miss J. H. Jenke, L. A. S.

The next meeting will be held in Masonic hall on Friday, 15th inst., at 1 p. m., when it is proposed to install the officers. San Miguel is a new town in the northern portion of San Luis Obispo county, on the line of the S. P. R. R., and in the heart of a very fine farming district. The Catholic Mission Church was established at this point in 1797, and still stands a worthy monument of the pious labors of Spanish padres, though the communicants are represented by but a few of the descendants of the native Californians. The town takes its name from the Mission, and the Grange acted wisely in retaining the appellation, thus, in a measure, advertising the place more widely, as it justly deserves to be. As should be known of a community so newly settled, there is not at present an overplus of Uncle Sam's circulating medium, but at the same time no place in the State, probably, has brighter prospects for the good time coming. A large acreage of wheat and barley has been sown on land never before under the civilizing influence of the plow, and the season so far having been the most favorable ever known since farming began here, all are in a most hopeful frame of mind. Judging from the very favorable sentiment expressed by many of the farmers of the vicinity regarding the Order, the prediction is warranted that ere the lapse of the current year San Miguel Grange will number a large membership.

F. B. L.

Paso Robles Grange Reorganized.

MESSESS. EDITORS:—Paso Robles Grange was reorganized to day by J. V. Webster, Esq., Past Master of the California State Grange. It might not be amiss to state for the information of your readers that no Grange ever existed in the town of Paso Robles, but that the organization known as Paso Robles Grange held its meetings in a schoolhouse on the Estralla Plains, about five miles east of the Paso Robles springs. In organizing this Grange, Bro. D. F. Stockdale, the last Master, is entitled to a special praise for the generous assistance he rendered in escorting me over the country in his own conveyance. For the untiring efforts of Bro. H. W. Rhyne, also a Past Master of this Grange, much credit is likewise due for the success of the movement.

Eighteen men and women enrolled themselves in the good cause, and the work of reorganization was carried to a successful conclusion by Bro. Webster. When about half through, five or six others, eligible and equally worthy of wearing the honors of a Patron, sought admission to the Grange-room, but the lateness of the hour would not permit the interruption, and they were compelled sorrowfully to retire and await their admission by regular initiation at some future time.

The officers for the ensuing year are J. D. Lindner, M.; Levi Ekline, O.; H. W. Rhyne, L.; R. D. Cruickshank, S.; D. L. Deal, A. S.; Jos. Tidrow, Treas.; D. F. Stockdale, Chap.; A. Kingery, Sec.; B. B. Pierce, G. K.; Mrs. L. E. Ballard, Ceres; Martha Tidrow, P.; Mrs. D. F. Stockdale, F.; Kitty Linn, L. A. S.

A meeting will be held in Masonic hall two weeks from to-day at 1 p. m. for the installation of officers and for such other business as may properly come before it.

Next week I will visit San Luis Obispo to ascertain whether there is any "sand" among the farmers down that way. Yours truly,
Paso Robles, March 2, 1889. F. B. L.

From Sister Overhiser.

MESSESS. EDITORS:—As I am quite sure you and many of the readers of your paper will be glad to hear of the recovery of Sister J. J. Woodman, who met with so serious an accident by being thrown from a carriage on our return from Manhattan to the City of Topeka, after the visit of the members of the National Grange to the Agricultural college, I will transcribe a portion of a letter written by her after her return to her home at Paw Paw, Michigan. The letter was received by me in January, but other writing, which required immediate attention, and pressing duties, have prevented me from sending it to you sooner.

My Dear Friend and Sister:—The days and weeks roll by and I have not written to you. I sent a short letter to the Grange Visitor, published at Kalamazoo, Mich., thinking that all would hear from me, and I would write sisterly letters as time and strength would permit. How often I think of you and Sister Hayes beyond

the Rockies, and in that fair and summer clime we read so much about. In the RURAL, which we receive and read carefully, I do not find much of personal interest, but I did learn from that paper that Bro. Hooper had arrived home and was well. I feared the injury to his head would prove to be more serious than at first it seemed.

Speaking of the Grange and its members, Sister Woodman writes: "We are one great family in the Grange, and I cannot help feeling an interest in you all, and every meeting I attend strengthens this union; but the one at Topeka, when I lay there so helpless and received the kindness, love, and help that I did, has endeared you all to me more than words can express. I cannot look upon my hurt as a sorrow, for there are so many bright and pleasant things to remember that the mist is all cleared away. I continued to improve slowly in the home of my friends at Topeka, and stood the journey home very well. Have gained gradually, but I think surely, since I arrived home, and if I go slow, expect to be able to attend the next session of the National Grange and meet all the old and many of the new members."

"We are having an open winter, no snow or sleighing, and as warm as April. Remember us to all the Past Masters and their wives when you meet them, for we know them all back to Bro. Hamilton."

I would add that Sister Woodman has already attended 15 sessions of the National Grange, not always as delegate, but so interested is she in the work of the Grange, that she goes and pays her own expenses. It is to be hoped that she will have health and strength to attend many more, for no sister would be more missed than Sister Woodman.

MRS. W. L. OVERHISER.

Stockton, Feb. 23th.

The National Grange Session.

MESSESS. EDITORS:—There is one subject, at least, about which the Patrons of California unanimously agree, and that is, the next session of the National Grange ought to be held in California. At the farthest, it will not be many weeks before the Executive Committee of the National Grange will select the place of meeting for the session of 1889. It is earnestly to be desired that every honorable means be used to get a favorable action of the National Committee. The Legislature will no doubt pass the bill, already passed in the Senate, appropriating \$10,000 to assist in defraying the expenses of the session, provided the same is held in California. It is therefore very important to begin the plan carefully for the meeting. Every brother or sister of the Order in California who knows any one of the members of the National Grange Executive Committee should communicate with said member at once, and urge the claims of the Golden West. There would be a great awakening for the good of the Order on the Pacific Slope, if it were known that the National Grange were to meet in California; and, unless we are much mistaken, the Order throughout the Eastern States would also derive great benefit, for there is no disputing the fact that the members of the National Grange will be royally entertained by their Patron friends of California. Those honest yeomen of the soil will find much to instruct, amuse, and profit them if they will but allow us to entertain at their next annual session. Without boasting, it can be safely promised, and the promise be fulfilled, that the National Grange will be entertained in California as it has never been before. That is California's reputation with those National bodies that have met on the coast, viz.: The National Educational Association, the Knights Templar, the National Encampment G. A. R., and the National Baggage-men's Association. Surely the Order of Patrons of Husbandry will not be behind in its attentions to the National Grange.

In a short conversation with Worthy Master S. C. Carr of Wisconsin State Grange, he urged the importance of immediate action by the members of the Order in California. He thinks it is a grand opportunity, both for the National Grange and for the members of the Order on the Western Slope, that the next session be held in California. Knowing that the members of the Order in California will do their full duty by the National Grange, we hope Worthy Master Overhiser and the Executive Committee will leave no stone unturned to secure the next session of the National Grange. Every Patron, in his or her sphere, can do something to help. Let us, then, work with a united will, for "where there's a will there's a way."

Yours fraternally, E. W. DAVIS.

Yuma, Arizona, Feb. 26, 1889.

Grass Valley Grange.

MESSESS. EDITORS:—The circular prepared by San Jose Grange was discussed by Grass Valley Grange March 2d. The first, relating to the tax on mortgages, was adopted by a vote of 15 to 1. The second, to withhold State aid from agricultural societies where gambling is permitted, was carried by a like vote, 15 to 1. The third was not acted upon, as the bill has passed. The fourth, fifth and sixth were adopted by a unanimous vote.

Our Grange has lost one of its most worthy members, Bro. Jonathan Butler, who died February 25th.

J. W. DE GOLIA, Sec'y.

Grass Valley, March 3d.

Another Grand Meeting at Tulare.

A beautiful forenoon's ride along the bay shore from Oakland to Martinez, and thence through some of the pleasant and well-cultivated fields of Contra Costa county, brought us to the junction at Lathrop in time to extend a hearty fraternal greeting with Worthy Lecturer Flint and devour a "six-bit" dinner on our way to Tulare last Friday. None of the grain-fields on the way, though, could be rated better than moderately promising, although a liberal rain soon would no doubt insure first-rate crop.

At Merced we were sadly reminded of our last parting with dear Bro. Chandler while returning from the State Grange session, until the memory of his many good deeds and noble examples turned our reflections into brighter and hope-inspiring thoughts of his worthy life and its never-dying influence on those who knew, loved and appreciated him truly.

Improvements were more noticeable than usual in most of the towns all the way to and in Tulare.

Bro. Talbot gave us a kindly call upon our arrival in the evening, and Bro. A. J. Woods early in the morning.

A brief and special morning session of the Grange was held and instructions given in the First and Second degrees by State Lecturer Flint, who also, by request, gave some well-rendered remarks. The State Secretary mentioned something of the progress of the Order. Mrs. Joseph Merritt being called on, led the sisters in expressing some excellent thoughts, which we hope she will send us for the benefit of both our brothers and sisters abroad. Bro. Maples recommended that at the next session of our Legislature copies of all bills introduced be secured by every Grange and examined and discussed, and action taken to apprise the members of the Legislature of the views of the Grange upon all bills of interest to farmers and the Grange.

Bro. Dawey stated that it was the intention of the publishers of the RURAL PRESS to hereafter have a special correspondent who would report all bills of special interest to farmers for publication, and keep our readers as well advised as possible on all measures of moment there. He believed the experience gained by the attendance of our legislative committee during this session would be of such value as to enable us to reap great advantages by more complete arrangements for a legislative committee at future sessions.

At the regular meeting in the afternoon, a class of 12 brothers and sisters were advanced, by the combined ritual, in the third and fourth degrees in a very able manner by Bro. Flint and the officers of the Grange.

Bro. Flint especially commended the work of Assistant Steward Talbot and Lady Assistant Steward Maples. Although performed under a new ritual, it is seldom we have ever seen so uniformly good services done. The new work was considered a decided improvement on the old and more lengthy ceremony.

The rituals used were those presented to Tulare Grange for being first in the State to initiate a class of ten or more under the new and combined ceremony. The rituals were the first set received and the same that were used in testing the work at the last State Grange sessions.

Two applicants were admitted lately by demit, so that already 14 new members have been added to the roll of the first Grange that so pleasantly entertained Bro. S. C. Carr, Master of Wisconsin State Grange, on his recent popular Grange tour in California.

Four or more other Granges have been heard from as most certain of soon initiating classes of from 10 to 20 under the new ritual, including several others visited by Bro. Carr, and some not so fortunately favored. Not less than 60, and probably over 100 new applicants, aside from the new Granges established, have thus been secured within the past 30 days.

The exemplification of the secret work and its signification, in which Sisters A. P. Merritt and A. J. Woods assisted, was a well-rendered and instructive feature. The class of Husbandmen and Matrons instructed is worthy of mention as one composed of both young and old, as well as very promising appearing candidates, all of whom we advise to make the Grange of value to them by persevering endeavors to be constant and active attendants until their presence is made agreeable to themselves and indispensable to the Grange.

At 3 o'clock Tulare Grange and its visitors, numbering about 75 strong (the brothers escorting the sisters), marched from the hall several blocks to the Cosmopolitan hotel dining-room, where a good and substantial feast was partaken of.

All well served (without sacrifice, overwork or second tables for patient waiting sisters or brothers), the return march was beat in round numbers and in due order to the hall.

By vote an open meeting was held, and Bro. Mackie introduced a friend, a member of a dormant Grange, Mr. Jas. Boyd, a pioneer of the Riverside colony, who made such practical and well-received remarks that we were glad to secure his promise to present them to our readers. Mr. J. S. Loveland, another friend from Riverside, clearly set forth among other desirabilities for successful farm life that of small holdings, which, we trust, he will also write out for our columns. Unanimous thanks were voted for their kindly addresses. Mr. Boyd is an old cor-

respondent of the RURAL, and both gentlemen long-time and appreciative subscribers.

Bros. Sam Fowler, I. N. Wright, L. B. Hawkins, Maples, Past Master Merritt, Master Moore, Mackie, De Hart (of Watsonville Grange), and other brothers and sisters spoke with zeal and earnestness.

Bros. Flint and Dawey congratulated the Grange on its able and excellent membership, and the good prospects of the Order throughout the jurisdiction and satisfaction received in attending another so good and successful a meeting of Patrons in Tulare.

The San Jose Grange resolutions were read by Secretary Harelson, and duly considered in open meeting. Another resolution recommending the adoption of the tax-reassessment law mentioned in Past Master Webster's communication in the RURAL PRESS for March 2d was added and the whole unanimously adopted, with instructions for the Secretary to send copies under seal of the Grange to the members of the Legislature from the jurisdiction of this Grange.

A vote of thanks was tendered the Lecturer and Secretary of the State Grange for their attendance and services.

The excellent music rendered by the choir added much to the pleasure of the occasion. Brother and Sister Bates, De Hart (of Watsonville Grange) and Schoemaker of Visalia were present. Bro. B. F. Moore, who has been suffering from rheumatism ever since the meeting of the State Grange, who was visited by Bros. Flint and Dawey, expresses strong hopes of soon being able to be on his feet and again doing good work for the Order.

We believe some active steps will soon be taken by Tulare Grange and other Patrons to reorganize Visalia Grange and new Granges at Porterville, Traver and other localities in Tulare and Kern counties.

Still journeying from home, we have only attempted to give a partial report of the good Grange day so much enjoyed, and hope Bros. Flint, Mackie or other good brothers and sisters will make up for the deficiencies.

Several new subscribers for the RURAL PRESS and Patron were received. An unusual number of improvements seem to be progressing in towns along the way from Oakland to Bakersfield.

A. T. D.

Gulling the Grangers.

Edward H. Fleming of cactus hedge fame is working this part of the country. He was in Sutter City about two weeks ago, where he succeeded in humbugging Henry Beste and swindling him out of his fine house and lot which he drew in the Sutter raffle last fall. Fleming, in common with men of his class, has a fluent, plausible tongue, and a business air which so charms the gullible that they fall an easy prey to his swindling operation.

He succeeded in selling a good many of these hedges to boomers in Fresno and Los Angeles counties who were willing to bite at everything with which sharpers baited their hook. After a thorough trial, those who bought them have declared the cactus worse than a nuisance. These disconsolate victims made it so warm for Fleming that he no longer found it pleasant or profitable to remain there, so he has changed his base of operations to the citrus belt of Upper California.

While in Sutter City he portrayed the beauty and utility of these hedges in such glowing terms, and the avidity with which every one purchased them, together with the immense profit attending the sale, that Mr. Beste immediately entered into an agreement to furnish an acre of ground upon which to plant the nursery, also to plant out and care for the young plants which should be furnished by Fleming until they should become marketable, when he (Beste) should sell them, receiving one-half the proceeds, the other half going to Fleming. In consideration of this one-half interest in the business, Mr. Beste deeded to Fleming his house and lot, valued at \$3500. About a week after the trade Mr. Beste received a few of the worthless plants which he set out. Since then he has heard nothing of the swindler.

A gentleman came up from Fresno last Friday and attached the property to satisfy a judgment which he held against Fleming.

We are astonished that Mr. Beste could have thus been imposed upon, as he is a gentleman of average business qualifications. We understand that Fleming is wanted in Marysville for some crookedness perpetrated while working Sutter City.—Yuba City Independent, Feb. 23th.

Fleming was in Red Bluff last week and attempted to work the town and the Grangers, but so far as we know, it was a complete failure. Our people "bite" at a good many new-fangled things, and get badly salivated sometimes, but they kept out of the clutches of the "cactus-hedge" swindle. Such men as Fleming and the "Hayfork" swindler are worse than tramps, worse than highwaymen, the very worst class of confidence operators. Fleming ought to be caught and whipped with some of his "cactus" until his skin would be as full of "stickers" as a porcupine is full of quills.—Red Bluff Sentinel.

MARYSVILLE, Feb. 28.—Complaint of obtaining money under false pretenses has been filed here against Ed Fleming, who claims to be the owner of a patent for cactus hedges. He had a check cashed here which was drawn in his own name on a San Francisco bank, in which, it has been ascertained, he is not known. Telegrams have been sent out to different places calling for his arrest.

An Address to Patrons.

To the Order of the Patrons of Husbandry: The untimely death of our leader, the lamented Bro. Pat. Darden, made it necessary for the 22d Annual Session of the National Grange to select his successor. The action of that body has placed upon me a great responsibility, and I appeal to every member of the Order for aid and assistance in an effort to meet the demands of the hour.

The interests of agriculture are largely in our care and keeping. Ours is the only agricultural organization which is national in its character, and which by years of experience has learned to avoid mistakes which bring great loss and disappointment to those who, without such experience, engage in enterprises which require great skill and a thorough knowledge of all the details of business.

Guided by such experience, we attempt no revolutionary methods in business affairs, but will aim to afford safe and sure financial advantages to those who wish to avail themselves of them. Looking the present and future squarely in the face, we realize that the advantages we seek for ourselves and families are not to be gained by a sudden and grand uprising of our people. We must carefully organize, educate, drill and discipline our forces before we can obtain and securely hold what is ours by right, viz.: "An honest share for wife and home of what the harvest yields." Not the harvest of the field alone, but all the rich rewards of faithful labor in the great harvest-field of mortal life.

The social, financial and educational advantages of our Order must be found chiefly in the subordinate and Pomona Granges. The protection of our interests from the operation of unjust laws and combinations must receive especial attention from the State and National organizations. More work of this character will be attempted this year than heretofore, and we hope with satisfactory results. The great combinations formed and forming all around us to oppress both producer and consumer must be ignominiously crushed, and all such formations made unprofitable and unsafe in the future.

In the accomplishment of this grand work, the Grange must occupy no second place. "The war has already begun," and must be waged with unremitting vigor and valor until all "shall receive a fair reward for toil." If we remain impassive now, we must soon become mere tenants at will upon a soil owned by corporations and syndicates, "worshipping the mammon of unrighteousness," but without a soul to be saved or damned. We cannot meet and engage all these forces at once. We must concentrate our forces where there is the greatest need of immediate relief. Our demands have been formulated by the highest power known in our organization, and orders have been issued to press these demands with all the energy inspired by a righteous cause.

In obedience to the instructions of the National Grange, I recently visited the seat of Government and pressed upon the attention of Congress our reasonable demands. The lawmakers seem anxious to know our wishes, and entirely willing to give them due consideration. Some important legislation which we have heretofore urged upon Congress has been already secured. The Interstate Commerce law, which is sure to prove a great blessing to our people, and grow in favor as the measure is better understood, is one of the results of our organized efforts. It is true that other influences aided us, but the Grange was the pioneer in the work, and sustained the principle when it was scoffed at by many of those who afterward gave us their assistance.

The elevation of the Department of Agriculture has been one of the objects we have sought, and success has crowned our efforts. If the good results we have a right to expect do not follow, it will be because we do not insist upon having at the head of this department a man who understands the situation and ably and honestly represents the Nation's greatest industry.

One of the objections urged against the elevation of the department was that it would become merely a "soft place" in which to put a partisan worker, "who must be taken care of." The same influence which secured the law elevating the department can be used successfully to induce the selection of men well qualified to perform the duties devolving upon the department. It is expected that the men selected will be in sympathy with the party in power when the selection is made. Fortunately all political parties have in their ranks men, who, by education and association, are well fitted for the work required; and we must always be ready to use our influence to obtain the selection of such a representative of agriculture. If we fail to do so, it would have been better not to thus increase the responsibility of the department.

Efforts are being made to procure some modification of the provisions of the Interstate Commerce law in the interest of commercial travelers. We have no quarrel with these gentlemen, but we cannot consent to have any such discrimination made. These corporations are public servants and must extend the same privilege to all classes and individuals. There is no sound reasoning in the claims set up, nor is there the least probability of their receiving favorable consideration, as we shall "watch as well as pray."

It seems probable that the principle of protection to American industries is to be recog-

nized and enforced for an indefinite period in our national legislation, and it is of great importance that we give the subject our careful consideration. I know that there are radical differences of opinion upon this subject among our members, but I think all will agree that whatever the system be, it should extend to every interest. The benefits and burdens should be shared by all. We should therefore demand that the same measure of protection extended to others should also be given to farmers. If the principle is wrong, its general application will result in the speedy enlightenment of all classes. If right and politic, then all efforts should be directed to perfecting the system.

Our members should become very familiar with all subjects upon which we demand legislation, and we have no agency which can accomplish so much in this direction as the Grange press. It must reach every member of the Order if he or she is to become an important factor in our struggle for the right. Other papers may be controlled by agencies inimical to our interests, and, therefore, not to be trusted. We have several good papers, knowing and serving no interest but that of agriculture; those who conduct them have ever been faithful to us. Have we always been true to them, and mindful of their necessities? I fear not. We must redeem the past by giving them our earnest support. Bravely fighting our battles, they must be cheered and sustained; do this heartily, do it now, and you will see such a wave of enthusiasm roll down the lines that all doubts and fears as to the final success of our cause will flee away.

The Grange hall is the drill-ground of our Order. Study well the ritual, digest and the U. W. work of our Order. "Be cheerful and united." And now, Patrons, cherishing in our hearts every kind feeling toward all other Orders and associations which seek to promote human welfare, let us strive with them, working hand in hand for the good of our fellow-beings. Fraternally, J. H. BRIGHAM, Master of the National Grange, P. of H.

San Jose Grange.

MESSRS. EDITORS:—San Jose Grange has not said a word about "sour grapes." I say to you confidentially, however (of course you won't tell), that San Jose Grange was sort of angling for that prize of Worthy Master Overhiser's, but when the RURAL came to hand informing us that Tulare had gone and done it, and that Merced was a good second, we saw the thing was up.

Don't think, though, that we let the green-eyed monster in to disturb our equanimity; not a bit of it. Love and wisdom is so firmly enthroned in our Grange that there was no show for that other fellow to get in; so we were delighted to hear such good reports from Tulare and Merced. Personally our sweet memories of the time spent at Tulare during the State Grange session were too green and fresh to admit of anything but good feeling toward Tulare Grange.

And as for Merced Grange, when we think of Bro. Ostrander we can't help but congratulate Merced Grange. During the week spent at Tulare we remember that at the hotel at meal-times there were two sets of waiters, one set that waited on the table and the other that waited at the table. The latter, mostly Grangers with good appetites, were so much more numerous than the former that their wants could not be supplied at once, so they had to wait, and during these moments of waiting we remember how the tediousness was enlivened by the laugh of Bro. Ostrander. It was as good as a tonic and would have filled the place of a dessert. So we greet Merced Grange and say, go on, sister, in the good work.

San Jose Grange took in two new members last Saturday. They were old stock—two that from stress of circumstances had drifted away from our Grange, but were taken up again by the vortex that is now sweeping over the State, and were brought back to their old fold, and we were delighted to have them back.

We had our ten all ready Saturday, but of course Tulare and Merced took the wind out of our sails, as far as taking the prize is concerned, but we don't mind that, we are going along just the same and are going to swell our ranks. The tide is setting in and the flow strong, and the Grange interest increasing.

Last Saturday we had to vacate the chair and go to the outer gate and attend to two who were seeking admission. Of course we couldn't take them right in, but we took their applications. So, Providence permitting, next Saturday we will have a class of 12 to initiate in the First and Second Degrees. Sister N. A. Sanders read a fine selection at the Grange last Saturday.

We have been whooping up Grange interests lately, but for the last five or six weeks we have done more whooping in the whooping-cough line than otherwise. Have had three grandchildren down with it and then my partner thought she must have it. People think it is a good joke, my wife having it, but we fail to see where the joke comes in. A quartet in one house, running up and down the scale from deep bass to high C, may be kind of funny to an outsider, but is serious business to those behind the scenes. They are all getting over it, however, and will make good Grangers by and by, so "all is well that ends well."

Fraternally, O. F. ALLEY, San Jose, March 4th.

Bro. Woodman's Visit to Lodi.

MESSRS. EDITORS:—We left Bakersfield Feb. 26th, in the evening, and on our arrival at Stockton the next morning found Bro. Overhiser awaiting, and we were not long in reaching his residence over the splendid highway that seems to make the miles much shorter than in the Eastern States. We entered his grounds between two stately oaks, on one of which swings the outer gate opening to the cosy "Oak Home" of the Master of your State Grange. We found the gate wide open, and we were heartily welcomed by Sister Overhiser and other members of the family. Our brother has a grand place situated in the midst of a grove of grand oaks whose ages reach back through the centuries. Here we saw all the paraphernalia of a great (Grange or) farm. Here was seen the lovely flower, the golden orange, the lovely evergreen, the dark-green eucalyptus, the blossoming fruit trees, the broad vineyard, the fish-pond, and everything in the line of agriculture, from the pruning-hook up to the combined harvester and thrasher, steam engine, pump, etc., and all of this surrounded with several hundred acres of waving grain, luxurious pastures teeming with flocks and herds. We only stopped for dinner at this time, as Bro. Overhiser had made out a program which suited us exactly. He had business at the capital (perhaps an ax to grind), so in company with him and Sister Overhiser we took the north bound train and were at Lodi before we had scarcely left Stockton. We found Bro. Huffman awaiting us at the depot, and we were soon domiciled at his nice home in Lodi. You remember Bro. Huffman accompanied your splendid exhibits to our State a year ago last November at the time the National Grange was held there. So of course we must see him and renew acquaintances there formed.

In company with Bro. Huffman we were soon on our winding way again, and we went all around the "sap bush," around and through miles of wheat, through the "green pastures," along splendid highways, all well fenced and free from weeds, bushes and other unsightly things. And then such fine residences, barns and other outbuildings, while in the background are seen the evergreen oaks in great profusion. We could not suppress the exclamation, "beautiful, lovely, glorious!" and now our mind wanders back to our Michigan home where letters received to-day inform us the mercury has been down to 13 degrees below zero, recently. But to sum up, we must say San Joaquin county (as far as my observation extends) is the finest grain region we ever saw. Stopping over night at Bro. Huffman's, we were with Patrons as they gathered at their Grange hall the next day to work for the Good of the Order. A goodly number of fifth degree members were present, and the time occupied with business matters to such an extent that the installation of officers had to be postponed one week. We had a very pleasant time with the members of San Joaquin Pomona Grange. We tarried over night with Bro. G. H. Ashley, whose residence is in the midst of a great wheat farm of 800 acres. In fact, it is wheat, wheat, and then more wheat, with occasionally a 160 acre watermelon patch or summer-fallow thrown in. Bro. Ashley returned with us to Stockton the next day in time to be present at the regular session of that Grange, March 1st. There was a goodly number of members present. Two ladies were instructed in the First and Second Degrees, which was very well done. We were very much pleased with our reception by the members of the San Joaquin, Pomona and Stockton Granges. The outlook for the Order in California is truly encouraging. Patrons are buckling on anew their armor and under such enthusiastic leaders as Worthy Master Overhiser and scores of other wide-awake workers, new Granges are springing up, dormant ones revived and a great Grange "boom" apparent. While in Stockton Bro. Overhiser kindly showed us over that flourishing city with its two flouring-mills which turn out 2800 barrels of the finest flour every 24 hours. We can vouch that the flour is first-class, for we ate of the loaf baked in the mill. We saw the hundreds of cords of sacks of wheat waiting their turn to go through the long line of whirling rollers. And the natural-gas well that gives light to all in the mill and helps run its 500-horse power engine. We visited the immense lumber yards, the most extensive we ever saw. The great grain storehouse 300 feet square. The great machine shops where the immense harvesters that sweep so grandly over the great wheat-fields of California are built. We visited the insane asylum where the unfortunate are so well cared for, and the cemetery where repose the precious ones of bygone days and years. It is a lovely spot and an honor to the citizens of Stockton. But we could not stay always with our kind friends about Stockton, so we bid them good-bye on the morning of March 4th and reached San Francisco about noon, where we shall spend a few days, then hope to be able to visit San Jose and Monterey. Then Sacramento and Marysville, and leave for Michigan the last of this month.

D. WOODMAN.

San Francisco, March 5, 1889.

MERCED GRANGE, at its meeting on the 2d inst., unanimously adopted the San Jose Grange resolutions.

Viticultural Favoritism.

EDITORS PRESS:—I hope some one familiar with the subject will explain what has long been a mystery to me—I refer to the appropriation for the support of a Viticultural Commission. I see in your issue of March 2d that the association, not content with the present \$30,000, heartily recommends a still larger amount.

On what grounds are the whole people taxed to support this one industry of our State? One, too, that many good citizens consider dangerous to the commonwealth, regarding its encouragement on a par with an appropriation for the cultivation of opium with an "apostle" paid to preach the innocent delights of its use? What a cry of indignation would go up at any proposition to pay an apostle of the Bible out of public money!

Why then Kate Field, the "apostle" of the "gospel of the grape"?

However, it is not the morality of the business I would discuss, only the injustice of this favoritism. No doubt an equal or less appropriation to industries acknowledged to be both useful and necessary would benefit the State as well as those engaged in them.

Leaving others to speak for themselves, I would say that here on the West Side, where by force of present conditions we can do little except raise grain, a few thousand used in the experiment of sinking a deep well for artesian water would, if successful, return a large interest into the State Treasury in increased tax-values and denser population. Land-owners would then have the courage to mortgage their homes for wells.

If you tell me the grape-grower gets this preference simply because he asks and works for it, then indeed I am astonished that stockmen, fruitmen, lumbermen and grain-raisers, each engaged in an occupation of greater money value to the State, tamely submit to pay out of their hard-earned wages for the support of a competing industry. There must be in California some thousands of men meeker than Moses.

If grape-growing is not self-supporting, let the vines be dug up and the land planted in something that does not have to beg its way. Tracy, March 2, 1889. Mrs. J. M. K.

Slickens in Australia.

In January last a destructive flood occurred at Castlemaine, Australia, through the overflow of a stream known as Forest creek. A number of lives were lost and much damage was done to property. What lends the event especial interest for our readers is that the disastrous consequences of the freshet are largely attributable to impairment of the natural drainage, through deposits of mining debris. A press dispatch, in relation to the occurrence, says:

The residents of the vicinity of Mount Alexandra state that a tremendous body of water poured down the ranges. Unfortunately, the bed of Forest creek, through Chewton to Castlemaine, was almost stilted up with the debris of sluicing claims, so that the water could not find its natural channel.

Thus a locality in far-distant Australia has experienced, as in the Sacramento valley, the results that are always to be expected where the discharge of mining debris into streams is allowed to assume formidable proportions.—Marysville Appeal.

Thimbleful of Thought.

[Written for the RURAL PRESS by M. E. T.]

The reformer should remember that all reforms move slowly, and that the steps of the masses are much like the first steps of infancy, and if he would lead he must conform his gait to that which is possible for his charge.

The farmer, of all men, can least afford to encourage anything in the way of anarchy or communism. He stands between capital and labor. Let him beware lest he be crushed between "the upper and nether millstone." Capital can bury his money and dig it up as he needs it, and labor can roll up his blankets and hie away to pastures new, but what can the farmer do but fight it out on that line?

The cure for all this trouble is for every worker to economize until he has money to lend or to invest in real estate, and for every capitalist to be obliged to hunt around for somebody to dig his potatoes on an empty labor market.

But this state of affairs will not exist until the laborer uses his surplus to buy bonds instead of beer.

Let city laborers practice the same economy and work as many hours as the majority of farmers do, and there would be fewer strikes and less agitation about the labor question.

If farmers would combine and work together more instead of following their present policy of "every fellow for himself," etc., there would be less need of grinding economy and less talk of being the prey of designing harpies.

ROSEVILLE GRANGE.—Sister S. J. Cross, Worthy Lecturer of Roseville Grange, writes: We are very much pleased with the PRESS. Roseville Grange is progressing. We will have a Harvest Feast the first Saturday in April, and will be very glad to welcome brothers and sisters from other Granges. You will receive notice from the Secretary.

Song of the Hindu Devotee.

[Translated by MR. BAYERS, an English missionary.]

The snow-flake that glances at noon on Kailasa,
Dissolved by the sunbeams, descends to the plain;
Then, mingling with Gunga, it flows to the ocean
And, lost in its waters, returns not again.

On the rose-leaf at morning, bright glistens the dew-
drop
That in vapor exhaled falls in nourishing rain;
Then in rills back to Gunga through green fields
meanders,
Till onward it flows to the ocean again.

A snow-flake still whitens the peak of Kailasa;
The snow-flake of yesterday flows to the main;
At dawning, a dew-drop still hangs on the rose-leaf;
The dew-drop of yesterday comes not again.

The soul that is freed from the bondage of Nature
Escapes from illusions of joy and of pain,
And, pure as the flame that is lost in the sunbeam,
Ascends unto God, and returns not again.

It comes not, it goes not—it comes not again.

Her Lesson.

[Written for the RURAL PRESS by MALLER STAFFORD.]

It was the June time of the year, the day a rare and perfect one when the sun shone through films of fleecy clouds that floated and lingered in the clear blue of the summer sky, tempering the ordinary warmth of the atmosphere.

A low-roofed, well-to-do but not ostentatious farmhouse was set well back from the road, and partially hidden by the great elms, that, as if in protection, cast their great branches over the long and broad veranda.

In front, the wide green lane stretched east and west, one could not see how far, and vast fields of grain, now in their richest verdure, rolled northward, blending with the low hills in the distance.

The roses on each side of the old-fashioned walk sent up their sweet perfume, and nodding in the wanton breeze, seemed to whisper their perfect happiness.

A great Newfoundland dog, "Boz" by name, lay stretched out asleep in a cool spot under a rosebush, and only stirred himself occasionally to brush away the too familiar flies; while carol after carol, from a family of linnets that had built their summer residence in the woodbine of the rustic veranda, sent sweetest music through the open hall door.

Everything was lonesomely quiet; there was not a human being visible except a youth leisurely plowing in the orchard near, and who now and then broke the dreamy quiet with "G'long! get up there, Bess!"

This surely must be Arcadia, so sweet a spot, so full of perfect rest and peace.

"Well, I do declare!" said a voice strangely at variance with the harmony of the scene—a voice fretful, almost angry, but withal melodious. "I do declare if this isn't too bad. It's nothing but cook and wash dishes and bake bread, and then bake bread and wash dishes and cook for variety. How lonesome it is without mamma, and papa away too. Nobody here but Ben, while I must stay mewed up as housekeeper. I just wish something would happen, I do! something exciting; but nothing ever happens at dear old Elmside—no event, I mean." A pause. "Poky!" in a tone of concentrated disgust and contempt; "the same old thing every day, over and over, from one year's end to another!"

The voice proceeded from the back porch and was from a young girl, who, with sleeves pushed up above her elbows, was rattling the dishes to give vent to her vexation. She was not red-headed and freckled-faced; she was not a backwoods country girl of the dime-novel type. On the contrary, she possessed a graceful figure, and in spite of the disfiguring frown her face was sweet and fair, and her every movement, even in the homely task of dish-washing, betokened the refined lady.

"There now!" said she with a sigh of relief, giving her homely work its finishing touches. "I'm done at last; no more washing dishes till after supper; but what shall I do with this long, long afternoon? I don't feel like writing, I can't stay in and sew—There! I have it. I'll take the last RURAL PRESS that Ben brought from the office yesterday, and sit under the elms and read till mamma comes."

A few magic touches to her toilet in her own room, in the way of a clean apron, a spotless collar and a coquettish shade hat, seemed satisfactory, for the counterpart in the mirror reflected back a smile; then the red lips parted.

"Pshaw! I really don't see how Harold Graham could think me—me—Miriam Wentworth—the prettiest girl in all the country side. He did say it, but he couldn't have meant it. It was only an empty compliment." So saying, she dismissed the thought, took

up the paper, and springing lightly down the stairs and through the long hall, was soon seated in her favorite retreat under the elms, lost in the story.

Miriam's was a nature so deeply imbued with the good, the pure and the beautiful, that she could not long give way to thoughts of repining and discontent. She had entirely forgotten the thoughtless and foolish wish of a half hour ago, but it was soon to be brought to remembrance in a most singular and unlooked-for manner. She had been immersed in her story perhaps not more than fifteen minutes, when vaguely and distantly to her preoccupied senses there came the faint rattle and rumble of wagon wheels. This was no uncommon sound, but as she still sat reading, the nearness and violence of the noise attracted her attention. She rose to her feet, and stepping out from under the trees, looked. It was a two-horse wagon, coming at a furious rate. It required only a glance to assure her that the horses had become uncontrollable and were running away. The driver, a stalwart countryman, sat on the front seat pulling on the lines with desperation. By his side was the figure of a little boy. On came the horses, snorting and rearing, with nostrils distended and eyes wide open with terror.

"Oh!" thought Miriam, "if he can only keep them in the road!"

They were opposite the gate, and she had barely time to frame this wish like the breath of a prayer. A sudden lurch of the horses, a heavy crash, the front wheel had struck the huge oak tree and splintered it to atoms. The sudden shock precipitated the occupants to the ground. The plowboy Ben had also been an eye-witness to the scene, and springing over the fence, he caught the animals by the bits in time to check their further flight. At the same moment Miriam flew to the gate and was soon by the side of the now bleeding and unconscious child. In a moment the man was on his feet and by the side of the wounded boy, from whose head the blood was flowing copiously.

"Harry! Harry!" called he gently; but the boy lay limp and to all appearances lifeless. "I'm afraid it's a bad job," he said more to himself than to Miriam, who stood with ashen face as if stunned by the suddenness of the accident and its dire consequences. It was but momentary; her womanly thoughtfulness came to her aid.

"Lift him up," said she, "and bring him into the house. Ben," she continued, to the boy, who by this time had the frightened team under control, "you get on Bess and go for Dr. Grattan as soon as possible."

"Yes'm, that I will," was the hearty response.

Meantime the man had lifted the light burden in his arms, and led by Miriam, soon placed it on the snowy bed in her own little room; while Ben, hastily unharnessing his plow horse, sprang on to his back and was off in the direction of the village.

"I'll tell Mrs. Wentworth so't she can come home. This is a mighty bad mess, I'm afraid," thought Ben as he clattered down the long lane.

By placing her ear to the child's breast, Miriam ascertained with joy that he still breathed. She therefore busied herself in stanching the profuse flow of blood, while the man, deeply affected, stood ready to obey her every command. In conversation with him, she learned in brief somewhat of their history. He was a farmer residing in a remote settlement. A week previous, a poor widow had died, leaving her only child—this boy, Harry Marshall—without friends or kindred, and it was the last wish of the mother that he should find a home in the orphan asylum, whither the kind-hearted farmer was taking him. In substance this was all, and as Miriam bent over the still, pale face, she could not repress tears of sympathy for this forlorn and friendless bit of humanity.

In the course of an hour the doctor's gig arrived at the gate, and to Miriam's surprise, not the good old gray-headed Dr. Grattan, but a young man sprang lightly from the vehicle, and hastily entering the hall, was met there by Miriam, to whom, bowing, he said: "Miss Wentworth, I presume?"

She bowed.

"I am Dr. Lathrop, at your service. I regret to say that Dr. Grattan himself is dangerously ill, but as his substitute I shall endeavor to do the best in my power."

Miriam expressed her thanks, and without a word more conducted him to the side of the still unconscious child.

Tenderly examining the wounds, he at last said:

"A very severe contusion of the head and a badly fractured arm."

"Is it—is it a very serious case? Can he recover?" faltered Miriam.

"No—not serious," was the reply slowly given, "unless there are internal injuries."

After a careful examination, the doctor satisfied himself that such was not the case, and then set about hopefully to restore suspended circulation.

"I am so inexperienced," said Miriam in a low voice, as she stood watching the doctor, and ready to assist as bidden; "but I did all that I knew, applying cold water and bandaging the wound."

"Indeed you did well," was the assuring answer.

"How unfortunate it was that mamma was away," resumed the girl. "She would have known just what to do. Ah, here she is now,"

as a slight stir was heard outside and a sweet, kind-hearted looking matron stepped softly into the room, bowing to the doctor and bending in motherly solicitude over the little stranger.

"Terrible!" said she; "but, doctor, there are hopes of his recovery?" inquiringly.

"Yes, madam; he's stunned from the effects of the violent shock, but he'll pull round, and we must do what is possible to assist nature."

There was not much said in the little chamber, as the doctor and the two ladies worked anxiously and watched for the first favorable symptoms of returning consciousness; but it was not until the sun was casting its long-departing lances through the tall elms that they were assured of success. A faint color stole into the pale cheeks and lips, and in a few moments more the gray eyes opened, bright and full of pain, the lips quivered, and in a bewilderment of wonder the boy gazed first on the doctor, then on Miriam, who were bending over him.

"Where am I?" he whispered in a weak voice.

"Be quiet," said the doctor, gently and kindly; "you're well cared for."

"Oh! I remember," replied the lad, trying to lift his head, which sank back on the pillow, and again the gray eyes closed, while the ashen pallor spread over his face.

"He's fainted. Haad me that cordial."

Miriam did as directed, and, with heart alert and hands ready, stood to execute orders.

A few drops revived him, but scarcely had he rallied when from pain and loss of blood he once more sank into a heavy swoon. The pulse beat low and the little life seemed ebbing fast.

The young doctor's face grew grave. Miriam and her mother noted this, and forbore to ask questions. At length the doctor turned to Mrs. Wentworth and abruptly asked:

"How far is it to Danville?"

"Fifty miles," was the prompt answer.

"There's no physician nearer?"

"None."

"It would be too late," said he as he shook his head.

"O doctor! you don't think it is so bad as that?" said both ladies in a breath.

"I hope not," was the reply; "but nature is nearly exhausted. There must be a change one way or another soon."

To all outward appearances, life had forsaken the waxen casket. All efforts seemed unavailing, but the pulse still beat faintly, and silently they kept at work.

The moments full of suspense seemed hours, and it was some time after this that, as Mrs. Wentworth and Miriam stood apart in a brief consultation, they were startled to hear the exclamation from the lips of the child: "I'm coming, mamma, I'm coming!"

To Miriam's overwrought senses this was his death-knell, and sinking into a chair, she covered her face with her apron and gave vent to her long-pent-up feelings in a flood of tears; but as Mrs. Wentworth stepped to the bedside, she saw at a glance that the crisis had passed, and to her inquiry for confirmation the doctor made reply:

"Yes, the worst is over now; he is sleeping naturally—dormant, doubtless. When he awakens he will be stronger, and I think will not again relapse into those fearful fainting spells."

Mrs. Wentworth was not long in whispering the glad tidings to Miriam, whose heart gave a great throb of joy.

"Now, ladies," said the doctor, seating himself in a chair with a sigh of relief, "I will watch with the boy the remainder of the night, and would advise you by all means to seek a little sleep."

After some persuasion, with the assurance that their services would be no longer needed, they retired.

Reaching the solitude of their own room, Miriam, as was her wont when in sore trouble or conscience haunted, sat down on a low stool at her mother's feet, and with a humble and contrite heart poured out to her ever-sympathetic ear the story of her thoughtless and foolish wish, and the discontented and unworthy feelings that had prompted it.

"It struck me like a revelation, mother, that this terrible accident was in response to my wicked and thoughtless wish, and O mamma! no one will ever know the agony I endured during that long hour before the doctor came. Alone with a human life trembling in the balance, and I, I feeling, in a measure at least, the wicked cause. It was a terrible retribution, and will serve as a severe lesson that will bridle my tongue against all such unworthy, thoughtless and wicked expressions and feelings as long as I live."

"Yes, Miriam, it is a severe lesson; but remember, dear, that sometimes out of what appears evil comes great good. God's ways are not our ways and He often employs wonderful methods to accomplish good. It is His gracious will that the little life is spared."

"O mother! only to think what might have been the result! I shudder at the thought."

The first sound that woke Miriam from a deep and heavy slumber on the following morning was a manly voice, low and melodious, singing in the garden below:

"The dawn crept faint from the hills afar
And the stars in their beauty softly set.

It was early spring.

Of the time I sing.

And the flowers with a tender dew were wet."

The words, breathed low but distinctly, were

clearly audible to Miriam, who, hastily making her toilet, glanced down at the singer.

The dawn was just creeping "faint from the hills afar," and every object in animate nature was awakening to the new life of another day. Miriam had recognized the voice of the doctor, but as she beheld the late manly figure slowly pacing up the walk, the hat pushed well back to get the full sweet odors of the morning breeze, and revealing a broad forehead and fine sensitive face, she wondered she had not noticed these striking characteristics before.

During those long hours of intense anxiety in the sick chamber, when a human life hung in the balance, when she stood ready by his side to obey his slightest wish, she had not thought of him in any other light than as the kind and gentle physician; but now—Even now she had no time for sentiment. Her heart was with the little sufferer, and tripping softly to his door, she entered.

The light had been extinguished and the room was in darkness, but softly stealing to the bedside, she heard the low and regular breathing of healthy slumber. Quietly as she had entered, she stole away, vanishing in the kitchen to prepare the meal, just as the doctor's footsteps were heard through the hall returning to his little charge.

The conversation during the breakfast hour was mainly the topic uppermost in each mind—the accident and the hopeful condition of their little protege.

"He's a boy of fine mind, I should judge," remarked the doctor. "Carefully trained, and educated better than most boys of his age—must have had a noble mother. What a sad history, to be left at his early age, scarcely eight years old, alone in the world! I feel singularly drawn toward the little fellow, and were it possible, would like to adopt him."

"I claim the first right," said Miriam, looking up brightly and blushing modestly.

"Why, Miriam!" said the mother in surprise.

"I mean it, mamma, if you and papa consent, and I know you will."

"It's a grave responsibility, my dear; though brought to our door, it does appear in the light of a duty."

"And a pleasure, mother."

"Every duty ought to be a pleasure," she answered, smiling, and so the subject rested.

The doctor having paid a last visit to the bedside of his little patient, promised to call again the next day and took his departure.

Miriam's busy fingers had already prepared a dainty breakfast for the little invalid, which he partook of with evident relish. He did not say much, only an occasional "Thank you" when she assisted him in his awkward endeavors to feed himself with his left hand, and when he had ended and she had adjusted his pillows, he sank back on them with a long-drawn breath of satisfaction, murmuring, "Thank you, Miss —"

"Miriam is my name."

"Miss Miriam," he repeated, thus in a few words revealing his boyish appreciation and gentle breeding. The dark eyes were turned on hers as if in inquiry, and Miriam looked in admiration at the frank expression and manly purpose in the face, now no longer drawn with pain, but brightened by the light of the expressive eyes and pleasant smile.

"The doctor has told you, I suppose, about the accident, and how you came to be here."

"Yes, I remember," he replied; "the runaway and all up to the time of the crash. After that I don't know what more happened."

"You were so stunned by the fall that you were unconscious for a long time."

He made no reply to this, but directly asked abruptly:

"Where is Mr. Barnes?"

"Oh, the man you came with? His wagon was badly broken, and he has taken it to the village for repairs."

He seemed to be thinking, but forbore to ask further questions, through fear of being thought rude, contenting himself with watching Miriam's graceful figure fitting about the room, her deft fingers busy in its arrangement.

She noticed this look of perplexity, and seating herself by his side, took the little well hand in hers and pressing it kindly, remarked:

"You are to remain with us, at least for a time, Harry, and I think we shall get on famously."

"Oh, you are very kind, as good as—as my own dear mother could have been," he altered, turning his face to the wall, the bright eyes full of tears. The thought roused up memories of his great loss, and hot and blinding tears coursed their way down his boyish cheeks.

Miriam strove in every way possible to dissipate these mournful feelings. She opened the windows, let in the carol of the morning songsters, and calling "Boz," coaxed the reluctant and good-natured pet into the room, where he stood wagging his long bushy tail, and with his great brown eyes looking inquiringly first at his mistress, then at the strange figure on the bed.

This last stratagem had its desired effect.

"See, Harry, here is Boz come in to ask how you are."

The boy brushed the tears away, and turning, a smile lit up his face as stretching out his hand, he said:

"Good old doggy. Come here, fellow."

After this, Boz was a constant daily visitor to the sick chamber, and when the lad's long imprisonment was at an end, they proved to be henceforth inseparable companions.

The sweet June days passed slowly, and at

last little Harry was able to walk forth again under the pleasant summer sky, and, with his arm still in a sling, pass many an idle hour under the old elms with his good-natured companion Boz, and often with Miriam, who, with her knitting or fancy-work, delighted to listen to the boy's conversation, his quaint rehearsals of history, biography and travels in which his well-stored memory seemed to delight. He possessed that rare gift, a remarkable memory; added to this a fluency and command of language, wonderful for one of his years, rendered him a congenial companion for the young girl.

It was during one of those hours under the elms, when after a conversation with her mother and father—Mr. Wentworth having returned home—Miriam broke the silence by asking:

"Do you like living here, Harry?"

"Ever so much," was the unhesitating reply.

"Should you like to remain with us and be my brother?"

"Very much indeed," said he enthusiastically.

"Well, that settles it, then," said she, smiling. "Papa and mamma are willing, and this shall be your home. I doubt not you will be loving, dutiful, and helpful, while on our part we will love, care for, and educate you."

The boy's face indicated serious thought. At last he said: "I hope I will never be ungrateful," and in a low voice as if listening and lingering over the new name—"dear sister Miriam," then as if to hide his emotion, he turned and walked slowly down the garden path.

As the years advanced the Wentworth household had no reason to regret the adoption of the little waif, so suddenly by an all-wise Providence thrust upon their care.

He grew to be a dutiful and loving son and a devoted brother, and more than fulfilled the bright promise of his early youth in intellectual culture and sterling principles, without which latter, no man can reach true manhood.

Though Miriam did not fail to remember the severe lesson, yet she often with reverent gratitude and humility saw in it the "great good" that had evolved from it.

Irrelevant as it may appear to our story, yet it will not be out of place to add that Dr. Lathrop did not in the least show any disposition to discontinue his visits long after Harry's recovery. On one pretext or another he sought the cottage under the elms. Sometimes it was a book for Harry, sometimes a new piece of music for Miriam, between whom his admiration seemed equally divided. There was some ultimate end toward which he was drifting. What was it?

The Tooth Will Come Out!

The tooth that means to come out, says the *Pittsburg Chronicle*, has conquered all men and all women. It has been soothed and coaxed. It has been held near fires until the cheek abutting it was nearly roasted. It has been chloroformed. It has been fed on essence of juniper and essence of peppermint and essence of cloves. It has been filled. Its nerve has been killed. Its miserable owner has been immured from fresh air like a prisoner.

This tooth sometimes sleeps, but it never forgets. It is most treacherous when it seems tranquil. It ulcerates at the roots when its possessor is about to indite a poem, take a journey or get married. It longs for release and hungers for the forceps. It may seem to compromise, but it merely bides its time. Its favorite recreation hour is just after midnight, when druggists and dentists have retired. If the ground is covered with snow and the winds piercing, it is fairly diabolical with activity.

There is no use in contesting issues with this mutinous and remorseless molar. Fight rheumatism, if you will, but throw up the sponge in this altercation. You have blistered your mouth and ruined your digestive organs and quarreled with your family and friends long enough.

Tell your dentist to pull your head off and the accursed grinder with it, and live on soup, if need be, but have peace once more. Jerk the abomination out and it will be content, the everlasting plague on it.

OLIVES AU NATUREL.—The Santa Rosa Democrat, after mentioning the familiar fact that an olive which has not gone through the pickling process discounts wormwood in bitterness (and, it might have added, a green persimmon in astringency) relates how an old gentleman who, according to his own assertion, has been a great reader, happened into a real-estate office the other day where a branch containing several well-ripened olives was being examined and discussed by a number of gentlemen. The old man soon became quite interested. Some one handed him two of the berries, asking at the same time if he had ever tasted the fruit in its natural state. "No," said he, as one of the glossy berries disappeared behind his gray mustache, "I have never eaten of the fruit associated with that sacred mount of which we read in the good book, but I have read much about their modern cultivation, and—ah! oh! oh!" He never finished the sentence. After a fruitless effort to remove the impression made on his sense of taste, he joined in the laugh.

The Champion Liar.

One Sunday morning while stopping at Rawlins, Wyoming Territory, I took a stroll to the cemetery. In this cemetery, as in many others that I have visited, they covered the graves with stones, to prevent the animals from digging or making burrows in the soft ground.

As I went in I noticed a fine-looking elderly man walking leisurely around. As we met I asked him if he could tell me why the graves were all covered with stones.

"My friend, you are a stranger here, otherwise you would not have asked that question. It is done to prevent the wind from blowing the coffins out of the ground. A few years ago, before we began rolling rocks upon the graves, it was no uncommon thing to see a coffin sailing through the street, with a bony arm or leg hanging over the sides. One time about a dozen of us were down there in Jim's saloon, when bang came a coffin through the door! It belonged to a chap who used to play poker with Jim in that very room where we were. When it struck the floor, he rolled out. I always thought he headed in there on purpose to be revenged on Jim. If he did, he won the pot, as it broke Jim flat. After that remarkable visitation, free whisky was no temptation for the boys to go there. So he has rented it for seven dollars a month to hold coroner's inquests in.

"When the wind starts in to blow in this country," continued the champion liar, "most all other business stops. There was a chap down East who got the idea that he could burst up a cyclone by shooting a charge of powder into it. We had a gun cast to try the experiment. After laying around Iowa and Kansas for a couple of years, trying to get a shot at a full-grown cyclone, a man from up here told him if he could break up one of these wind-storms he would have the softest kind of a snap on a cyclone. One day there was a flit car set off here, with a gun on board as long as the car, and about ten feet across the muzzle. He had it set up on that hog-back hill over yonder. About eight o'clock one morning, after he had everything ready, the wind began to get up a head. At ten, one of the boys told him he had better shoot, or the wind would blow it off the hill. Well, he set it off. It made a thundering racket, and I thought, for a minute, he had knocked the tar out of the wind, but the next gust knocked the breech out of the gun, and of all the deafening noises I ever heard the most ear-splitting was made by the wind blowing through that gun! People ran into their houses, shut themselves up, and wrapped bed-quilts around their heads.

"The mayor ordered it taken down. The owner hired a lot of us to help him. He happened to get in front of it and the wind took him through like a rifle ball! He never showed up here again. The next gust took the gun shrieking over the range. A short time ago some parties came from Denver to put down an artesian well. They were down about 600 feet, when late one night the whole town was turned out by a noise that sounded as though about a million railroad whistles were blowing. Some thought the gun had got back, while others argued that the wind had blown a hole through the mountain. When daylight came we found that the bottom of the artesian well had blown out and the wind was howling down through, and not a drop of water to be seen. They tried to sell that bottomless and eternally shrieking hole to the city as a 'curio.' But it was declared a nuisance and filled up.

"There is the bell for Sunday-school," he hurriedly added. "I have a class to teach, so I will have to bid you good-morning."

I was so stunned by the grandeur of the man's lying that I allowed him to get away without shooting him.—*Elm Wood in N. Y. Weekly.*

Don't Cross a Bridge Till You Come to It.

Once upon a time a man and a woman planned to go and spend the day at a friend's house some distance from their own. So one pleasant morning they started out to make the visit, but they had not gone far before the woman remembered a bridge they had to cross, which was very old, and was said to be unsafe, and she immediately began to worry about it.

"What shall we do about that bridge?" she said to her husband. "I shall never dare to go over it, and we can't get across the river in any other way."

"Oh," said the man, "I forgot that bridge. It is a bad place. Suppose it should break through and we should fall into the water and be drowned!"

"Or even," said his wife, "suppose you should step on a rotten plank and break your leg, what would become of me and the baby?"

"I don't know," said the man, "what would become of any of us, for I couldn't work, and we should all starve to death."

So they went on, worrying until they got to the bridge, and, lo and behold! they saw that since they had been there last, a new bridge had been built, and they crossed over it in perfect safety, and found that they might have spared themselves all their anxiety.—*Selected.*

YOUNG FOLKS' COLUMN.

Ellie's Soldier.

Almost thirty years ago, a little flax-haired girl named Ellie lived in a little cottage among the hills of New Hampshire. She was very happy with her father and mother, her one sister, her big gray cat "Fremont," and her dear rag dolly named Ida Bell. She had a big brother, too, but he was not at home. He was a soldier.

The big brother's name was Harry. He had come home one day in a blue coat with bright brass buttons that made him look taller and grander than ever, Ellie thought, and when he went away again he had taken her up in his arms and kissed her very tenderly, and Ellie noticed her mother's sweet face was very pale, and that her father had to clear his throat a good deal when he said, "Good by, and God bless you, my boy."

But little Ellie felt very proud to have a soldier brother, and when long letters came from him, telling funny stories of living in a tent, with many hundreds of other soldiers all in tents, and of cooking his dinner over a little fire out of doors, and of marching to the sound of music, the little girl thought it must be all like a great big picnic, and that it was a fine thing to "go to the war."

But there came a sad time in the little cottage when the merry letters did not come and father and mother said there had been a great battle and that Harry was "missing." Ellie did not know very well what that meant, but she knew that weeks and weeks went by and still there was no letter. And at last she knew, by the things she heard her father and mother say when they thought her busy at play, and by their sober faces, that they were afraid her big, strong, beautiful brother would never come home any more.

But little Ellie never believed that, and every morning she hoped he would come home that very day, and looked many times down the road, thinking perhaps she should see him; and she never lay down in her little bed at night without adding to her prayer, "And please bless my soldier and let him come home tomorrow."

She slept with her sister in a little room right off the sitting-room, and the door was always left a little way open. One night, after she had been asleep a long time, she awoke suddenly, thinking she heard voices. Her father often sat up long after the others were in bed, and she thought he must be speaking to some one. Then she heard another voice that sent a thrill all through her little body. She could not see anything from the corner where her little bed stood, but she sat up and listened.

A bright light was shining through from the sitting room, and she heard a strong and gentle voice say: "No, don't disturb them to-night. I'll lie right down here on the floor." Ellie's heart beat so hard that she could not hear what her father said in reply; but suddenly the light went out and all was still.

Who could it have been? Was it, could it be, the darling brother? It was his voice surely, but nobody seemed to be awake now. Her sister was sound asleep by her. Could she have dreamed it, after all?

She was only a little girl, and she soon grew sleepy while trying to think if anything so beautiful could be true; and soon she was really dreaming.

But she woke very early in the morning, before any one else in the house; and her first thought was of what she had heard in the night. Was it a dream? It was just growing light. She would get right up and find out.

Out of bed she softly crept, and through the door into the sitting-room. The rosy dawn was just coming in at the east window. There on the floor lay somebody wrapped in a big blue soldier's overcoat. Ellie's little bare feet made no noise as she stole along the floor and knelt down by the tall figure. The head rested on a soldier's knapsack, and the close brown curls were the same she remembered so well. The face was brown and very thin, and the eyes closed in sleep; but it was the dear, kind face of her big brother Harry. But it all seemed so strange; could it be real? She put out one little finger and timidly touched his forehead.

It was enough! The eyes flashed wide open and the big strong arms clasped the little white night gowning girl in a big bear-hug. No doubt now whether he is real or whether she is awake! Her shouts of joy rouse all the rest of the household, and out they come without waiting for clothes, that small matter, like everything else, being forgotten in the wonderful joy that had come. Only the father, who had known it all night, could get his wits together enough to go about the regular morning duties for a long time.

As for little Ellie, the big brother himself dressed her, and then she sat on his knee and heard his wonderful story of escape from prison and long sickness, and how at last he had got back to his old regiment and straightway been given a furlough to come home and rest and gain strength. And, in the happy days that followed in the cottage, little Ellie at least forgot all the pain that had gone before.—*S. S. Times.*

DOMESTIC ECONOMY

Bread.

The Young People's Society of the First Congregational Church of San Francisco recently listened to a lecture by President Horace Davis of the University of California. His subject was "Bread."

The lecture-room was well filled with an interested and inquisitive audience, who for some time previous to the opening remarks studied the various charts hung upon the wall to illustrate the lecture. One of these represented a grain of wheat, very much enlarged, showing the different parts of which it was composed. There was the silica, or outer covering, the bran, the starch, the flour and gluten and the germ. Another diagram showed the improved rollers now used for crushing the wheat, instead of the old-fashioned mill-stones. There were also shown the component parts of wheat and flour, both by the chemist's and the millers' analysis.

The General Analysis.

For instance, the chemist's analysis of wheat gave: Water 9.94, carbo-hydrates 76.18, fat 2.08, fiber 1.56, albuminoid 8.60, ash 1.84. The millers' analysis was: Flour 77, offal 22, waste 1. The chemist's analysis of flour was: Water 12.96, starch and dextrin 70.33, cellulose .77, sugar .68, insoluble albuminoids 9.40, soluble albuminoids 4.20, fat 1.08, ash .58. The millers' analysis of flour was: Water 13, dry starch 77, gluten 10. The result in making bread is as follows: Flour 100 pounds, water 49 pounds; less 19 pounds by evaporation, and you have 130 pounds of bread for every 100 pounds of flour.

It is necessary, said the speaker, to have gluten in the flour in order to make light bread. Rice has no gluten, and cornmeal a very slight trace, and for this reason wheat is the accepted food of civilized nations. It contains both fat and muscle-making properties, while other breads contain only muscle-making properties. The starch in the flour is what fuel is to the furnace. It gives heat to the body. The wheat of California is not the best wheat for making bread-flour. The long, dry season makes the grain very dirty, and this dirt has to be separated from the grain before it is fit for food.

Wheat is ground now between chilled iron rollers instead of stones, and it has to pass through a great deal of handling. The grain is first cracked by being run between two rollers, which have small teeth. One of these rollers revolves faster than the other. It is then passed between another pair with finer teeth and then sifted. Then through four more pairs before it comes to the smooth rollers, each time being sifted through bolting-cloths. Finally the flour thus obtained is bolted, the bolting-cloths being of the finest quality of silk, made only in two places in the world. The silk is worth \$4 a yard, and is 40 inches wide.

Milling the Grain.

In these different processes the bran, silica and other matter is separated, and only the starch and gluten retained. This gluten, separated from the starch, is nearly like india rubber, and consequently the quantity is very small, otherwise the bread would be indigestible. It holds the escaping gases from the yeast or powders used, and thereby makes the bread light. Rice or cornmeal not containing gluten allow these gases to escape, and therefore when baked present a soggy, heavy bread. What is known as graham bread is not a healthy bread in the general acceptance of the term. It contains the silica, itself indigestible, but in the case of an invalid it helps to digest the remainder.

At the conclusion of the lecture President Davis allowed himself to be bombarded by a fusillade of questions, to all of which he gave suitable replies. He exhibited the wheat in its various transitions, from the full grain to the fine flour; also, some specimens of dough, some of gluten from which the starch had been eliminated; some of starch from which the gluten had been extracted; some of farina, bran and other wastes, all separated, and explained the uses of each in nature.—*Call.*

Prunes.

To Make Them Perfectly Delicious.

Take one pound of dried prunes, wash clean, pouring off the water; let stand an hour or so to soften slightly. (This delay is not absolutely necessary.) Then add just enough water, sweetened to taste, to boil them in. Cook till well done, then cool them; when cool, have prepared the whites of five eggs beaten to a "stiff," add this to the prunes, liquor and all; heat the whole carefully till quite light. Then place in an oven moderately hot for 20 minutes. Then cover well with sweet cream and cool. Serve it hot or cold, always with sweet cream; sweetened milk would do.—*Mrs. H. C. C., Fresno.*

A SATISFIED SUBSCRIBER.—J. Pattinson, a subscriber of the *RURAL* in San Diego county, writes: "We esteem the *RURAL PRESS* so much that if we could only take one paper it would be the *RURAL*." We hope he may never be less pleased with it.

The Week.

The showers, of which the measure was given in last week's *RURAL*, have been followed by clear weather. The rains served an excellent purpose, so far as they went, but have not materially changed the situation except at the South, where the fall was heavier than in central and northern localities. The greater part of the State is therefore still anxious as to the season's outcome, and a "great storm" is a thing most ardently desired.

In public affairs the change in the administration at Washington has occupied chief attention. The quiet disposition with which the American approaches such changes is a tribute to our national stability. In Europe such incidents are viewed in the light of crises and are approached with misgivings and with doubled police vigilance. In the United States there is a little band music, a few thousand gallons of terrapin, an oration and a torch-light procession, and the event passes into history so quietly that unless one happens to be looking he does not notice its entrance. After all, the American method is better, but it may take the rest of the world a long time to get up to it.

SAN LUIS OBISPO is the leading dairying county of California, having produced over 3,000,000 pounds of butter and more than 1,000,000 pounds of cheese the past year.

The New Secretary of Agriculture.

The new President has appointed Ex-Governor Jeremiah M. Rusk of Wisconsin to hold the portfolio of agriculture in his Cabinet. Governor Rusk is not among the candidates proposed for the place by the leading agricultural Order to whose efforts the establishment of the new secretaryship is due, but he is a man of good repute and not only sprang from the farm, but chose agriculture for his means of livelihood after attaining his majority, and was one of the pioneers in laying the foundations for the present vast agricultural interests of the Northwest.

We are indebted to the courtesy of the San Francisco Call for the portrait of the new Secretary.

Hon. Jeremiah Rusk.

retary which we give herewith. In the account of his life it is stated that he was born in Morgan county, Ohio, in 1830, and worked on his father's farm until he reached his majority. He was 23 years of age when he removed from the State of Ohio into Wisconsin, taking a farm near Viroqua, Vernon county. In 1862 he entered the Union army and began a military career which was distinguished and honored. He was Major and afterward Lieutenant-Colonel of the Twenty-fifth Wisconsin Regiment, and Brevet Brigadier-General. Shortly after the close of the war, he was elected State Bank Controller, an office which he filled from 1866 to 1870. His next public position was that of member of the Forty-second Congress in the House of Representatives. He served three consecutive terms in Washington.

In 1881 Mr. Rusk was elected Governor of Wisconsin. In May, 1886, Governor Rusk gained a national reputation by his firmness in suppressing the anarchist riots in Milwaukee, and was a prominent Presidential candidate at the last Chicago Convention.

TAXING WANDERING FLOCKS.—There has been quite an issue made at the present session of the Legislature to secure an amendment to the county government bill which would limit or prevent the taxation of wandering flocks and herds in the counties which they may visit for grazing. So far the movement has failed, for the county government bill passed the Senate on Tuesday on a second reading without any amendment affecting the present method of taxing sheep and cattle. That will give the Supervisors the power to levy any tax they see fit on all domestic animals.

PERSONAL.—We were favored a few days since with a call from J. P. Shumway, M. D., an old subscriber formerly of Syracuse, N. Y., now of 1267 Sixth Ave., Oakland. He was accompanied by his friend, Mr. J. M. Sherwood of Onondaga county, N. Y. We like to note the arrival of such people in California.

A FARMERS' UNION ASSIGNS.—The directors of the Farmers' Union of Livermore valley made an assignment for the benefit of creditors on the 5th. The assignee will continue the business, and the assets will probably exceed the liabilities, although they cannot be realized on at present.

A CANNERY COMPANY with \$30,000 capital has been organized at Colusa.

Olive Oil in Sonoma Valley.

The rich, clear, delicately flavored oil made by Col. George F. Hooper, from olives grown on his ranch near Sonoma, has been repeatedly spoken of in the *RURAL PRESS*, and it will be remembered that both his olive oil and his pickled olives were awarded premiums at the Mechanics' Fair in this city two years ago.

Early this week it was our fortune to be the Colonel's guest at "Sobre Vista" (as he and Mrs. Hooper call their charming home), and we especially enjoyed seeing the olive grove and the apparatus for oil-making, under the kindly guidance of Mr. Geo. W. Hooper, a nephew of the Colonel and his right-hand man upon the property.

The olive orchard sits a little way up the vale-side above the house, on a slight knoll, whose rich, dark-brown, loamy soil holds moisture even in mid-summer, does not bake at all, and can be plowed at almost any time. There are about 200 trees—say 150 Mission and 50 Redding Picholine—set 24 feet apart and occupying somewhat less than three acres.

Those of the Mission variety are 14 years old from the cuttings, and the largest are a yard or more in girth near the ground. Mr. Hooper has had to prune them severely to keep their boughs from meeting, and thinks 40 feet apart would be a better distance for planting.

The Redding Picholines were well-rooted trees a year old when obtained from Mr. West of Stockton in 1880, but they never bore (to speak of) until last year, when their yield amounted to but 34 pounds.

The wash referred to last week, which has proved so effectual a destroyer of the black scale, is made as follows: 15 pounds sulphur (French sublimated preferred); 10 pounds whale-oil soap, best quality; 4 pounds concentrated lye. Mix with 12 or 15 gallons of water and boil well—say half an hour; then add enough water to bring the whole quantity up to 60 gallons. When the wash is to be used, Mr. Hooper heats it to about 130° Fahr., which seems to make it spread better, and applies with a "Climax" force-pump.

With this, as before mentioned, he gives one spraying in February or March, and another in July or August, following it up with a warm solution of soda, just before the fall rains come to complete the cleansing. Now and then a tree has been gnawed and nearly girdled by wood-rats, but these troublesome rodents are not many.

For oil-making the ripened berries are carefully picked by hand (which costs from 75 cents to \$1 per owt.), and spread to dry upon the floor of a loft where the air circulates freely. They are stirred and turned over, from time to time, with a wooden rake to prevent their molding and facilitate drying, and in the course of 30 days, or thereabout, are ready to be ground.

At the outset of his experiment, looking about for some cheap means of grinding the olives in small quantities, Col. Hooper found at the shop of Hawley Bros., in San Francisco, a "Keystone" oiler-mill (No. 2), which answered the purpose nicely. This device has two chilled-iron rolls, one concave and the other convex, placed horizontally. These rolls can be set at any desired distance apart; they are so geared that the convex makes two and a half revolutions to one of the concave; they have low, sharp ridges, running lengthwise, and when the berries are fed from the fan-hopper into this little mill, as one admiring spectator remarked, "it just chews them up," stones and all.

The ground olives are then placed in an 18-inch tub, lined with coarse Russian crash, and put under the wine-press. (Not wishing to mix oil and wine in the manufacturing process, the platform of the press has been fitted with a tin cover, which keeps the oil from the wood.) After pressing once, the "cheese" is broken up and subjected to a second pressure; then they break it up again, mix water with the fragments and press a third time; after which the pomace is fed to the hogs or used for fuel.

The juice from the pressing is caught in large tin vessels, where they keep it for about a month, skimming it every little while, and occasionally turning the liquid from one tank into another to promote the separation and rising of the oil. In reply to a query as to what proportion the oil bears to the whole bulk of liquid expressed, Mr. H. replied: "About one-fourth of the first pressing and half the second." He

also said that it takes about 70 pounds of the fresh fruit or 49 pounds of the dried to make a gallon of oil.

Being invited to taste the contents of the different tanks, we found the new-made oil delicious. A small quantity from the Redding Picholine had a distinctive nutty flavor which was quite agreeable, yet might not wear so well as the blander product of the Mission.

Before bottling the oil they filter it through cotton batting. A convenient filter is made by fitting a large tin pail with four or five perforated false bottoms or strainers. These are graded in size, so as to lie one above another, an inch or two apart, in the tapering pail, with layers of batting on each strainer. At the lower end is a funnel through which the filtered oil runs into the tank, from which it is drawn by a faucet into the bottles.

Of course it is understood that this work has been chiefly tentative. These gentlemen have been trying to see what they could do in a small way. The oil they made in 1887 amounted to some 30 cases—60 gallons; in 1888 not quite so much; this year it will doubtless be more. Enough has been done to demonstrate the fitness of this valley for olive culture and the worth of the product. Col. Hooper has several thousand cuttings now in nursery and will probably be able, another season, to plant out 20 or 30 acres.

He is so pleased, also, with the efficiency of the little "Keystone" mill, that he thinks the same plan might be advantageously applied in constructing machinery for olive-crushing on a larger scale.

Much might be said of the 100 acres of vineyard, the 80 acres of prune trees, and various lesser matters at "Sobre Vista;" but so far as our present writing goes, we must grant a monopoly to the growing olive interest.

Lower California Wanted.

Some weeks ago the following resolution was offered in the House of Representatives by Congressman Vandever of Southern California:

Resolved, That the President be requested to open negotiations with the Republic of Mexico for the cession to the United States of the peninsula of Lower California upon terms that shall be mutually just and honorable to both countries, and that shall tend to strengthen the ties of friendship between the two great American republics.

If we really want Lower California, it is not now the time to buy. The reported discovery of gold mines, whether sensational or real, would just at present make the Mexican price for the peninsula greater than we could afford to pay. By the way, if the stories prove true and our citizens move south as rapidly as they are now reported to be doing from San Diego and Los Angeles counties, the next proposition will be by the Mexican Government to see what figure the United States will place upon California.

NO MORE ENGLISH SPARROWS WANTED.—The farmers of this country are reported to be agitated over the proposition made by local sporting men to bring a number of English sparrows from the East to be used in shooting matches and are declaring their unswerving hostility to the scheme. It is reasonable to suppose that some of the birds will escape, and through their remarkable fecundity, the country will soon be at the mercy of the little pests. The damage to the orchards and grain-fields of Southern California will be great, and the argument is also advanced that the wild song-birds that lend such a charm to this country will be driven out by the imported article. If no other method promises success, the Legislature will be importuned to make the importation of the birds a punishable offense. It would be a good regulation. If the sportsmen need birds, let them capture the "California linnets," which are such bud-eating pests that we can well spare them. There is no need of bringing in other such birds.

DOGS AND FOWLS.—A committee of the California Poultry Association attended the meeting of the Pacific Kennel Club last Monday night, and arrangements were made to hold a poultry exhibition in conjunction with the coming bench show.

THE COST OF BREAD.—The distribution of bread after it is baked now costs the average workman in a city as much as it does to grow the wheat, mill it, barrel it, move it 1500 miles and convert it into bread, all put together.

Inauguration of President Harrison.

We give herewith a portrait of Benjamin Harrison of Indiana, inaugurated on Monday of this week the twenty-third President of the United States. The arrangements for the inauguration were perhaps the most complete and elaborate ever made, and the affair was as impressive and satisfactory as the

robes of office and a Testament in his hand. The rain fell on the silver hair of the Chief Justice, which the cold March wind disheveled. This scene was witnessed by a drenched and shivering crowd, who crowded in front of the portico of the Capitol, and had waited in the blustering wind to see one administration go out and another go in.

And yet the inauguration was successfully accomplished. The new President read his

served his district two terms in Congress. His grandfather was that famous leader and general, who, after a life of brilliant and distinguished service in the forum and the field, was elected President of the United States, after the most exciting campaign of 1840. His great-grandfather was one of the heroes of the Revolution, Governor of Virginia, and a signer of the Declaration of In-

dianapolis, his present home. On breaking out of the Rebellion he home, a successful practice, and all that makes life pleasant, in response to his country's call for her defense. The same diligent application that contributed to his success in peace, enabled him to succeed in war, and the proclamation of peace found him wearing the stars of a general. In 1881

BENJAMIN HARRISON, TWENTY-THIRD PRESIDENT OF THE UNITED STATES.

weather would allow. Those who need a reminder of what March can do at the East in the way of weather may read the following extract from a telegraphed account of the inauguration:

Benjamin Harrison stood with uncovered head in a cold, drizzling rain, with a raw wind blowing in his face, in front of the National Capitol to-day, and took the oath of office as President of the United States. Grover Cleveland stood beside him, with his hat in one hand and an umbrella in the other, which he held over Mr. Harrison. In front of Harrison and Cleveland was the small figure of Chief Justice Fuller in his

inaugural address, a paper with many excellent points, and the manifestation of joy, which took form in torchlight parades and a grand inaugural ball, was not dampened, in spirits at least, by the unfortunate weather.

Vice-President Morton took his oath of office and assumed the presidency of the Senate. Thus the new administration begins its labors.

Benjamin Harrison was born at North Bend, Hamilton county, Ohio, August 20, 1833, and is therefore in his 56th year. His father was John Scott Harrison, who

dependence. One of his ancestors was a general of the Commonwealth of England, before Cromwell's usurpation, and whose unflinching Republicanism cost him his life in the early days of the Restoration. His immediate descendants came to America and founded the family in this country.

Benjamin Harrison received a classical education, and is a graduate of Miami University, Oxford. Immediately after graduation, he commenced the study of law at Cincinnati, Ohio. In 1853 he was married, and in 1854 he established himself at In-

he was elected to the United States Senate, serving out his full term. In 1884 he was prominently canvassed as a Presidential candidate. The memorable convention of 1888, resulting in his securing the nomination, is still fresh in the minds of our readers, and the smoke of the political conflict which ended in his election has only just cleared away.

Those who know him best give assurance that in Benjamin Harrison the country will have a wise, conservative and eminently safe President.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

HOPS FOR LONDON.—San Leandro Reporter, March 2: James Linfort shipped 110 bales of hops to London this week. He expects that the shipment will reach its destination in about three months, and from the reports of the English markets, there is little doubt that the hops will sell for more than they would in San Francisco.

Fresno.

THE CROPS.—Fresno Republican, March 1: C. W. Callahan has just returned from a trip through the grain-growing districts, and reports the growing crops in a most satisfactory condition, and the prospects good for the largest output of cereals ever known in the county. The late shower came just as it was needed, and along the eastern foothill section the rainfall amounted to nearly three-fourths of an inch.

SALE OF A RAISIN VINEYARD.—Yesterday the well-known raisin vineyard of E. Kennedy was sold to Mr. Dudley for \$75,000. In 1887 Mr. Kennedy purchased this quarter-section for \$9600; at once planted it to raisin grapes, and put up some cheap farm buildings. The general opinion is that he sold his vineyard for much less than its actual value, as it is one of the finest pieces of property in the county. Mr. Kennedy says that he sold it for the reason that it was a cash transaction, and that he was not an expert in the vineyard business, and could not attend to it. The vineyard is located among the best in this locality; being adjoined on the east by the famous Forsyth vineyard, on the west, by the equally famous vineyard of Jos. T. Goodman.

Humboldt.

HORTICULTURAL.—Rohnerville Herald, Feb. 27: On Wednesday evening last, the Humboldt County Horticultural Society was organized here with 17 charter members. The meeting was held in the Town Hall, and the following officers were elected: Geo. E. Stewart, Pres.; Wm. B. Dobbyn, V. P.; J. T. Manon, Sec.; and B. H. McNeil, Treas. The board of directors elected are M. Perrott, Wm. Dinsmore, Wm. Evers, A. P. Campton and E. J. Look. The regular day of meeting is the first Saturday of each month, and persons wishing to join can do so on sending in their application by a member, with a fee of \$2, and receiving a majority vote of the members present at the meeting. The object of the society is to advance the interests of horticulture and fruit-growing in this county and prevent the spread of pests.

SHEEP THRIVING.—Eureka Standard, Feb. 28: H. M. Devoy, traveling in the interest of Christy & Wise, wool merchants, returned last evening from an extended trip over the southern and western portion of the county, taking in Garberville, Round valley, Harris, Blocksburg and Upper Mad river. Everywhere the people interested in wool-growing are jubilant and look forward to a prosperous year. The mild winter has allowed the grass to grow; feed is consequently abundant and the sheep in excellent condition. The crop of lambs is large, especially on the South Fork and about Garberville. The sheepmen are very much annoyed by coyotes, and say the animals are more numerous than for several years past.

COYOTES.—Judge Carr had an attraction in the Police Court Saturday and Sunday. It was nothing more nor less than a coyote. Min. Hunt, who has been in the employ of L. C. Beckwith on Upper Mad river, brought it to town, and will receive \$16 from the county for having dispatched one of the pests. Min. says there are a large number of coyotes around the sheep country, and that they have managed to make several of the "critters" bite the dust in the last two or three weeks.

CHICKEN THIEF PEPPERED.—There is a gang of chicken-thieves in the city and a large number of coops have been visited the past week. The thieves have had to pry off locks to get into several chicken-houses that have been robbed, thus adding the crime of burglary to that of larceny. A man living in the southwestern part of town had his hen-roost visited several nights ago, and then took the precaution to put a good lock on the door. Thursday night he heard some extra noise in the yard, and, going to the window, saw three large boys or men in the yard, one of whom was prying the lock off the door. He warned them to leave, when to his wonder one of the audacious rascals talked back to him in an insulting way. He opened the window and gave the rogue a charge of fine shot in the rear that sent him out of the yard in double-quick time. It is probable that some surgeon had a job yesterday, and the thief may be identified.

Lake.

ALMOND TREES.—Lower Lake Press: D. M. Hanson has completed planting his almond orchard, having now upward of 1400 trees in the ground. Those planted two and three years ago, he reports as the most vigorous upon his place, and now full of bloom.

Los Angeles.

GRAIN ABOUT NEWHALL.—L. A. Herald, March 2: So far as information is now attainable, there are over 6000 acres in cereals in the valley. Much the larger moiety of this is in the hands of the Newhall Farming Co. On these lands there are barley, wheat, oats and

rye. Many think that barley and wheat are the only cereals raised in this section, but oats and rye yield fine crops here. Last year, the Newhall Co. thrashed a large amount of rye, the greater part of which was shipped to Hamburg, Germany. There is usually an active demand for this grain for the German market, and it brings good prices. A much larger area ought to be sown to it, and it ought not to be shipped abroad. In the coming time when paper is made in large quantities in Southern California, rye straw will be in active demand.

PROFITABLE ORANGES.—J. H. Brewer has a small orange orchard in the Vernon district; there are about 250 trees or 2½ acres. Yesterday he sold the crop for \$1000 on the trees. It is not claimed that even the Vernon district, fertile as it is, is the best for orange culture. The foothill country is generally conceded to be better.

CEREALS AND FRUIT.—There will be larger sowings of wheat and barley in the county this year than ever before. Portions of the Palos Verdes ranch, never plowed before, have been put in grain this year. On the San Pedro ranch the same is true. Well-informed residents of the district estimate that between the Los Angeles river on the east, the Cahuenga mountains on the west, the city on the north and the ocean beach, that is, on the San Pedro, Los Palos Verdes, Sanol, Redondo, Centinella, Cienega, La Bellona, and other ranches along the belt outlined, there is not less than 100,000 acres in grain. The Lankershim Land and Water Co. has 2000 acres in grain, every available acre of their lands being leased out on shares. On these lands there are newly planted 1300 acres of deciduous fruit orchards. The fruits being set out are mostly apples, peaches, pears, plums, apricots, quinces, figs, olives and English walnuts. The planting of walnuts is very liberal.

Mendocino.

FRUIT GROWERS IN COUNCIL.—Ukiah Dispatch-Democrat, March 1: The Mendocino County Horticultural Society held one of its most interesting and profitable meetings last Saturday. There were several new members received, and every one who was present felt that the half-day was profitably and pleasantly spent. The remarks made by our County Horticultural Commissioners, Messrs. Purdy and Thomas, are worthy of special mention. Mr. Purdy thinks we are in a fair way to get ahead of the bugs with proper diligence. It is the opinion of Mr. Thomas that the woolly aphis is in nearly every apple orchard in this section, but fortunately the remedy is cheap and effective.

Sacramento.

WHOLESOME EXERCISE FOR TRAMPS.—Sacramento Bee, Feb. 25: At the regular meeting of the Board of City Trustees this morning, Mayor Gregory said that he had made arrangements for the erection of a frame building in the rear of the city prison, where idle and dissolute men could be set to work breaking rock, to be used upon the streets, and he wanted the board to support him. Warden Aull of the Folsom prison had offered to furnish all the rock necessary at \$2 a carload. The Mayor said that if the men were only kept at work six months, it would do a great amount of good by scaring out hard characters. Of course he would rather give the street work to honest labor, but something would have to be done, too, in the case of the tramps who swarm into the city. A switch will be constructed upon which to haul the rock into the prison yard. The Mayor said there was no excuse for a man being a tramp in California, as work can always be found on the fruit ranches. The proposed plan will do away with the chain-gang, which is now used by the county authorities on country roads. The board passed an order giving the Mayor power to have a necessary inclosure made in which to hold the rock-breakers.

San Bernardino.

AFTER THE CITRUS FAIR.—San Bernardino Times-Index, March 2: Although the fair is over, the good work that it has accomplished will go on. The attendance the last night was good. It is not known at this writing just what the actual receipts and expenses were, but it is roughly estimated that the Board of Trade will have a surplus of \$500 with which to pay off their indebtedness, and that this aid will enable them to get to work and do much for the benefit of this city and county. The Executive Committee of the citrus fair is deserving of the thanks of the whole community for their exertions, and so are the fruit-growers of this county, who by their large and liberal displays made the fair such a success.

San Diego.

EDITORS PRESS:—We have had another glorious rain, which makes the precipitation for the season to date 14 inches. With what rain we now have there will be a good crop of grain, fruit and grapes, but we want 3 or 4 inches more to make a good honey-crop. During an experience of many years I have never seen a large yield of honey with less than 18 inches of rain. With less than 18, the black sage will grow well, but the white will not; the moisture gets out of the ground before the blossoms mature so as to yield honey. It would seem from the reports from different sections that we are favored with more rain than some localities; can it be that the seasons are changing? You know how short a time it is since San Diego county was considered little more than a barren waste. The stranger coming into our charming little valley to-day would think there

was something besides sand and jackrabbits. We have one of the favored spots of our glorious State—what used to be called the upper Sweetwater valley, a section so sheltered by the mountains on all sides that it is free from the coast fogs and the withering blasts from the eastern deserts. The soil near the creek bottom is a rich black loam; farther back it is decomposed granite, fine for fruit, vines or berries. The orchards are mostly young, but no thriffter and finer-looking trees can be found. The raisin grape grows here to perfection. Mr. McFarland and Mr. Sheldon are the largest producers; many others have vineyards that will soon come into bearing. The peach, apricot and in fact the whole list of California fruits do splendidly here. We are just finishing a new school building that will be an honor to the district and will be dedicated about March 15th. I never miss a chance to speak a good word for the PACIFIC RURAL PRESS, which has for a long time been a constant visitor in my family. Even when thousands of miles lay between us, the faithful old PACIFIC RURAL PRESS found us in a foreign country and we have always found it clean, healthy, progressive and instructive, a fit companion for old or young, and now as ever we look for its coming as a dear friend. Oh! I nearly forgot to mention, among other products of our valley, the chickens, which do splendidly and are so healthy. I am very much interested in the poultry department of your paper and especially two of the last reports in Feb. 16th number. I am breeding up and in good time will have a report to make of my Brown Leghorns.—A. W. OSBURN, Dehesa, San Diego Co., Feb. 27, 1889.

San Joaquin.

EDITORS PRESS:—The high hopes of three months ago have been considerably toned down by two months almost without rain. I see by consulting the table in your last that we had a very good share of the rain of Feb. 23d, Tracy showing about half an inch by rain-gauge. Grain is looking pretty well, although rather backward, and as February is apt to be a dry month and spring showers are to be expected in March, we still hope for a fair crop. Nothing could be more delightful in the way of weather than the present, or indeed all the last winter.—MRS. J. M. K., Tracy, March 2, 1889.

San Mateo.

ARTESIAN WATER.—Redwood Times and Gazette, March 2: F. F. Moulton has had an artesian well bored on his premises at Fair Oaks. At the depth of 185 feet he struck a fine stream of water, which rose to within 30 feet of the top. The well is eight inches inside with an outside pipe 12 inches in diameter and cemented between to prevent surface water from entering.

Santa Clara.

PACKING COMPANY INCORPORATED.—San Jose Mercury, March 3: Articles incorporating the J. M. Dawson Packing Co. were filed in the County Clerk's office yesterday. The purposes of the company are to acquire and sell real estate, deal in fresh, canned, sealed and dried fruits and vegetables and other articles, and to carry on the business of canning and drying fruits, etc., to handle tin ware and other canning materials and to receive goods in storage. The corporation is to exist for 50 years, have five directors, the names of whom for the present year are E. J. Dawson, E. L. Dawson of this city, M. H. Myrick of Santa Clara, Geo. W. Beaver of S. F., and Geo. H. Wheaton of Oakland. The capital stock is \$100,000 divided into 1000 shares of \$100 each, and the amount of stock subscribed at present is \$85,000. E. J. and E. L. Dawson each own 250 shares and the remainder is divided between G. W. Beaver, M. H. Myrick, W. E. Davis, G. H. Wheaton, J. A. Folger, L. P. Drexler and H. Wadsworth, who have 50 shares each.

Sutter.

ORCHARD EXTENSION.—Farmer, March 1: G. F. Starr has just finished planting an addition to his already fine orchard above Yuba City. He has now 5300 fruit trees, most of which have been bearing for several years, besides a large vineyard of choice raisin and table grapes. The following is a list of the trees and vines planted this season: Peaches—500 Tuckan cling, 160 Wheatland, 150 Muir, 200 Hale's Early, 400 Wager, 300 Winters and 100 Old-nixon. Prunes—300 Tragedy. Cherries—100 Royal Ann, 200 Black Tartarian, 200 Centennial. Pears—800 Bartlett. Grapes—5000 Muscatel, 3000 Zinfandel and 600 Thompson Seedless.

Santa Cruz.

OLIVE AND ORANGE.—EDITORS PRESS:—A few days since I visited the mountain ranch of Mr. Pilkington & Son. They have 200 acres of land with large orchards of the finest varieties of apples, peaches, etc. The son, Mr. H. B. Pilkington, invited me out to see his olive orchard, where he has 500 healthy-looking trees, two years from the setting, of the Picholine variety. His trees were one year old when he set them out. I think his olive trees are the most thrifty, considering their age, that I ever saw. On the southerly slopes of the Santa Cruz mountains, facing the Bay of Monterey, is, in my opinion, one of the finest sections in the State for olive production. Mr. Pilkington gave me an orange from a seedling which originated on his place. It is seedless, of fair size, thin skin, juicy and richly flavored, divides readily into sections, leaving very little pulp when the juice is extracted. I think it

will prove a valuable acquisition among the citrus fruits for Central and Northern California.—O. F. SHAW, Santa Cruz, Feb. 15, 1889.

BEEF ACREAGE.—Pajaronian, Feb. 28: The following farmers have contracted to plant the acreage of beets opposite their names this season: [61 names.] Total, 621 acres. The following have promised to plant the acreage of beets opposite their names, providing the season is favorable: [33 names.] Total, 446 acres.

TRAPS FOR SQUIRRELS.—J. Giberson, who purchased Mrs. Brower's farm near Moss Landing, last fall, is using steel traps in his warfare against squirrels, and finds that the best and cheapest way of clearing out the pest.

Tehama.

A CHEERFUL OUTLOOK.—Red Bluff Sentinel, March 2: Up to this writing, 12.28 inches of rain have fallen this season. The crop in this county looks fine, and grain and grass are growing rapidly, although there is some winter-sown grain that has not come up. Stockmen report fat sheep, lots of lambs and a prospectively fine clip of wool—probably the best spring clip in 15 years. The fruit crop has not been damaged the least bit; no frost to hurt anything. Tree and vine planting goes on apace, with the prospect that a larger acreage will be planted than in any two years previous.

ARTESIAN BORING.—Red Bluff Cause, March 2: We made a visit to the artesian well Wednesday afternoon. Mr. Fox was busily engaged in drilling, but making slow progress on account of having struck a bed of black sand—it fills in so. "In rock," said he, "I can drill 35 or 40 feet a day, but I can't make that progress in sand." The well is now down 1684 feet, and water rises to within 15 feet of the top. Three sizes of casing have been used—10-inch, 8-inch and 6-inch. The 10 inch casing goes down 496 feet and shuts off all the surface water. The 8-inch casing goes down 1140 feet to the top of the sandstone. The 6-inch casing extends down 1682 feet, and will be used until the well is completed. He has bored through sandstone, sand and cement, encountering a great deal of sand, which has made the work slow. Mr. Fox is well equipped for the work. He has a 25-horse power engine, and is well supplied with casing drills, etc. The drill he is now using weighs 4800 pounds. The water is now very muddy, but before the six-inch casing was put in was clear as crystal. It is not known whether artesian water will be struck or not, but the Board of Supervisors has concluded to have the well bored down 2000 feet.

Tulare.

LOTS OF LAMBS.—Visalia Times, Feb. 28: Luke Howeth, the extensive wool-grower of Fountain Springs, was in this city Tuesday. He stated that this season has been a good one for sheep-raisers, and that the present month has been the best one for lambing he has ever experienced in this country. He marked his lambs only a few days since, and figured up an increase of 103 per cent. This is extraordinary, the average yearly gain being about 90 per cent. There has been an entire absence of cold weather this month, and feed has been abundant and nutritious, which accounts somewhat for the increase of lambs.

Yuba.

WATER FOR ALFALFA.—Cordua Cor. Appeal: Grant & Sall have begun operations to bring water for irrigating purposes through their old ditch running northwest from the Yuba river. Both of these irrigation-enthusiasts contemplate successful cultivation of alfalfa by means of river-water. The proprietor of the well-known Hall stock-ranch has begun the preliminaries to raising water by means of steam-power for irrigating alfalfa. We understand that a large well will be sunk, the water to be pumped into a reservoir.

ARIZONA.

FINE FEED ON THE RANGES.—Phoenix Herald, Feb. 28: F. B. Moss has returned from his range on New River, where he has been rusticated and looking after his cattle. Mr. Moss states that the unusual hard winter rains have had the effect of making the stock ranges in that region better than were ever known before, and (something almost unheard of) a great many cattle are dying from bloat, owing to the greenness and luxuriance of the grass.

OREGON.

THE SILO A SUCCESS.—Hillsboro Independent: Col. T. R. Cornelius last week opened his silo, and it was a surprise to many to see how well the ensilage had been preserved. With the exception of two or three inches on top, the whole mass was found in a perfect state of preservation. This removes the doubts entertained by some as to the possibility of preserving feed by this method in this excessively moist and warm climate. Col. Cornelius began filling his silo about the 1st of last September, and sealed it up about the 1st of October, so that it remained sealed about 3½ months. It was filled with green corn fodder, cut into half inch lengths, and as there was no chance for evaporation, the ensilage retains all the juice and moisture which the green corn fodder originally contained, making it very rich feed, the cattle eating it with great avidity. The silo is 16 feet high. About 200 tons of ensilage was put into it.

Betsey Snow and the High-Hat Bill.

EDITORS PRESS:—From my earliest remembrance there have been many nice jokes and funny witticisms in the papers about woman's love for new bonnets. Bonnets and mothers-in-law are two fruitful items of ridicule in both political and religious papers. Our high-toned journalists have wisely seized upon this method of calling public attention to the fact that a woman's highest ambition is to wear a \$15 or \$20 bonnet, and that the mothers of the wives of young men are the greatest enemies of their daughters' husbands and children, and ought to be speedily exterminated.

The magnitude of the bonnet subject is just beginning to be appreciated. The wave of bonnet criticism has rolled from the Eastern States to our broad Pacific, and finds among our noble law-makers men with brains enough to give the matter their most serious attention.

While Fred was engrossed in reading legislative proceedings quietly to himself and I was absorbed in the wifely duty of cooking mush for the pigs' breakfasts, a happy smile overspread his fine features and he kindly asked me to listen and hear what our California Solons were doing for the good of my benighted sex. I thanked him tenderly for his thoughtfulness, ceased the artistic labor of stirring mush, and listened to his silvery tones as he read to me the "High-Hat bill" just introduced into the Assembly. Here it is as reported for the San Francisco "Monarch."

Down with the High Hats.

Mr. Damron, in the Assembly this afternoon, introduced a High-Hat bill, which was referred to the Judiciary Committee. It reads:

SECTION 1. It shall be unlawful for any spectator in any public place of amusement to wear a covering for the head which shall reach more than three inches above the crown of the head or more than three inches beyond the lateral circumference of the head; and any person wearing such a covering for the head shall be guilty of a misdemeanor, and shall be fined in a sum not less than \$5 nor more than \$10, or be imprisoned in the county jail not less than two days nor more than six days; provided, that this Act shall not apply to females more than thirty-five years of age.

As I am a female less than 35 years of age, and liable at any moment to become the happy possessor of a hat several inches higher than the law admits, I was very grateful to my protector for calling my attention to the bill.

As soon as the mush was well cooked, I took a string and measured the height of my present hat, and what was my horror to find it 3½ inches above the crown of my head! It was a very narrow escape, although I have not been to any place of amusement since my marriage, except to church a few times, and that will hardly come under the head of places of amusement in the bill, I suppose. Had I been so unfortunate as to have worn my hat to the theater after that bill received the Governor's signature, I do not see how I could have spared the time to go to jail a week, unless I had taken my mending along, and I never could have raised the five or ten dollars to pay my fine, as the hens are not laying much now, and the butter has to go for groceries.

I asked Fred why females at 35 were exempt from the penalty, and he says on account of their great age. At 35 females are no longer beautiful and attractive, and law-makers and lawyers would have no object in arresting them and having them brought to trial. A new age of chivalry is just dawning, he says, and when girls from 15 to 20 are arrested, there are scores of lawyers who would only be too glad to make a display of their gallantry by pleading their cause. Besides, it is hardly to be expected that women at the advanced age of 35 will go out much evenings, especially to places of amusement. Fred says if the bill becomes a law, two new offices will be created, a hat measurer and an age detector, which will give employment to a good many gentlemen who are too intellectual to engage in manual labor. Also if this law works well it will open the door to other much-needed legislation. The height of trimmings above the crown of the hat must be defined, and the color the same. The spirit of the law is liable to be defied by strong-minded women who might wear hats the legal height and width, and then pile the ribbons and feathers 12 or 14 inches above that. It grieves me to own that some females are so perverse that they think they know better than men what is proper for them to wear. When that beautiful law was passed in some of the Eastern cities, making it a misdemeanor for females to wear Mother Hubbard dresses on the street, women actually trampled the law under foot, and were forced to languish in jail for the offense. Torn from the bosom of their families, with no one left to smile on the hearthstone, get the meals, milk, wash, iron, etc., it would be supposed that such open defiance of law would never occur again. It may, however, unless females under 35 are on their guard.

I grieved Mr. Snow very much when I thoughtlessly asked if he did not think a law ought to be passed prohibiting males under 35 from going out of the theater between acts, leaving their female companions unprotected until they returned, smelling very strong of smoke and whisky, and when the play was over, and they attempted to walk home, be so weak that the females would be obliged to lead them or call a hack. He gazed at me a moment in silence, and then poured forth in unrestrained eloquence the following beautiful sentiment:

"My dear Mrs. Snow, do you for a moment suppose that the noble representatives of this magnificent State will so far degrade their high calling as to frame laws militating against their liberties? You do not understand the principles underlying our free institutions."

I was penitent for my rash words, and at-

tence, "our country cannot afford to do business on a narrow-gauge policy like that. It would not require more than 12 or 14 hours to draft that bill, and not more than a couple of days to discuss it. Sometimes members absent themselves during nearly the whole session, but their pay goes right on. That shows magna-

an honest, useful means of checking the tendency to strong-mindedness among young females. The only objectionable feature of the bill is, it brings female headgear into politics, and they may take advantage of such freedom and follow their headgear. Let us be humble and do right. BETSEY SNOW.

FIG. 1—LADIES' HAT.

FIG. 2—LADIES' COSTUME.

tempted to soothe his troubled spirit by saying I had no doubt the High-Hat bill was introduced for pastime—to while away an idle hour by representatives who were pining for their far-off firesides, and asked him if he did not think their wages ought to be docked to cover the time spent in such high-toned pastimes.

"Betsey," he replied, softened by my peni-

ninity of a high order." Waving his hand gracefully, an indication that his explanations were ended, I retired from his presence with my heart filled with gratitude for our public protectors as well as my own.

Dear female sisters under 35, lose not a moment in getting the hight and "lateral circumference" of your hats. The bill may prove a bit of legislative playfulness, but more likely

Fashion Notes.

Ladies' Hat

FIG. 1.—Black straw of fine, pliable quality forms this hat, which has a square crown and a broad brim that turns up at the back and for some distance at the sides in box-turban fashion, but flares in front. The edges are outlined with lace braid of a yellow tone that is brought out very effectively by the dark background. Loops of deep-rose ribbon are closely plaited and laid in fan-fashion on one side, peeping out from the uplifted brim. The decoration is on the top at the back and consists of three stiff loops of black moire ribbon placed well forward and two very full tips that show in their fluffiness a scale of pinks ranging from pale rose to very deep pink. This *chapeau* must be placed straight on the head, and to attain a becoming effect the hair must be arranged low. The shape is well suited to those who can wear becomingly an English walking-hat.

Ladies' Costume.

FIG. 2.—Serpent's-green French serge, dark-green velvet and Kursheedt's Standard Valenciennes lace flouncing are here combined. Upon the round skirt is a full drapery of flouncing, which hangs with the admired natural effect to the foot; and over this drapery at each side is a long, flat panel of serge that is slashed to the knee at the center, revealing the lace drapery prettily between the edges. The overdress has a pointed basque-front that is curved well at the sides, where large pocket-laps of velvet lie upon the hips, the fronts lapping narrowly in double-breasted style, with an invisible closing. The present fancy for contrasting effects in the fronts is charmingly exemplified by the arrangement of the lace and ribbon trimming. A row of lace edging is turned to the right from the closing edge, and from the left shoulder start four rows of velvet ribbon that are carried forward diagonally to the closing, where they are terminated under butterfly bows of velvet ribbon, a similar bow being placed on the front below the collar. A row of lace is turned down over the high standing collar, and lace edging of the same kind is rolled up on the sleeves in deep-cuff fashion over deeper pointed cuffs of velvet; the sleeves are sewed in with fullness across the shoulders. At the back, the overdress hangs in straight plaits, to the foot of the skirt, the plaits being produced by underfolded fullness below the waist line of the middle three seams.

Any preferred variety of lace may be used instead of that pictured, black lace combining fashionably with a number of colors. Silk, velvet, or the material may be used for the flounce-drapery instead of lace, and when the material is thus used a contrasting color will often be chosen. Bordered goods make up effectively in these costumes, the border being decoratively placed at the edge of the flounce-drapery. The mode is especially handsome for tailor made gowns, and buttons will prove a fashionable trimming, small ones being effective at the closing and on the sleeves, and large ones on the panels and pocket-laps. Much braiding will also be seen, and appique garnitures, passementerie, galloons, etc., will be stylishly used.

The rolling brim of the hat is smoothly faced with velvet, and the trimming consists of lace and watered ribbon.

About California Birds.

EDITORS PRESS:—I notice that when any one lacks information on rural subjects, and states that fact in your convenient columns, some kind friends are sure to supply the need in the next issue.

Who will give me descriptions of California birds, their habits, food, song, localities, etc.? As an Eastern person, I find things very different from at the old home, but the subject is a delightful one and will repay study. To the young especially I should think it would prove a valuable pastime. I chanced this morning to open a "Book of Birds," and these words caught my eye: "Besides great numbers of worms and grubs, the sparrows eat the seeds of many noxious plants, as dandelion and thistle. These valuable qualities are shared by most of our small birds, and all richly deserve protection." The careful farmer may, and does, demur to the last clause, recalling his losses in cherries and peaches.

Who will tell me how far north the mocking-bird breeds in California, and where thrive best the finches and thrushes? LUCY.

Feb. 25th.

Public Affairs.

Prison-Made Bags.

EDITORIAL PRESS:—The manufacture of bags at the State Prison, and their sale and distribution, seems to be a more difficult subject to the average politician than they expected. To a business man, however, it is not surprising that persons unfamiliar with legitimate mercantile operations should fail to make a success in a calling that requires years of experience to perfect.

No business man would expect, or hope, to control the price of bags in this market with a stock of two to three millions of bags, more or less, when the consumption runs up to forty millions annually. Nor would he deem it possible to distribute among the farmers, equally—or in just proportion—the make of the prison, so as to give all of the farmers a benefit or preference.

Such a proceeding is more in the nature of buncombe, if you know what that is, than legitimate business. It pleases the small farmer no doubt to think that his friend the politician is looking sharply after his interests, and the politician may honestly believe that such a thing can be done, and does not know himself what merchants learn by frequent sad experience, that the law of supply and demand will make the market price of merchandise as surely as water will overflow all obstacles in the course of time, and that you might as well expect to hold back the waters of the Sacramento with a two-foot dam as to control the bag market with less than a single month's supply of bags.

Nearly all farmers have their agents in this city to sell their produce and secure their supplies, and this is the practice, I believe, in most other counties. The fact that this practice exists generally is sufficient proof that it is the best for the farmer, as he is always at liberty to do his own business personally, if he desires. If he has an honest and level-headed merchant, who will be satisfied with the regular commission on the business, and not a speculator on his own account in a like product, the farmer will have all the advantages of the merchant's experience in his purchases and sales. It is more important to the farmer to know when to buy or sell than any difference in commissions, as between merchants, that he might save, and consequently, that merchant whose judgment in relation to the market is best—and most reliable—must be selected if the farmer desires to prosper. Good judgment is based on reliable information in relation to the markets of the world, as well as the local market, and but few farmers can be sufficiently posted, considering their location and lack of information in relation to the general markets, and therefore the most of them depend upon their factors attending to their purchases and sales.

Therefore, it would not be prudent for the farmer to buy bags directly from the prison agent upon his own judgment, because he might pay considerably more for them, even if he had a preference, than he would have to subsequently through a lower market, and which his factor, with a better knowledge, might anticipate for him.

Deliveries of bags to farmers for cash is about the only method that could be adopted by the prison agent in making sales. But how is the agent to know all the farmers in the State? How much land they cultivate, how much grain they raise, and what proportion of the prison output each one should have as his just proportion—say about one-thirteenth of what he used, basing the output at three millions and the consumption thirty nine millions. If the agent is not just in the distribution of the benefits, there will be trouble, of course, and it would require an annual census to inform the agent of the requirements of all the farmers for each current year, and it is no wonder that politicians have become bewildered at the formidable undertaking to them of selling bags. Besides, farmers are not all raising grain, and why should the grain farmer be benefited at the expense of the fruit or dairy farmer, who pays the tax necessary to provide for the prison cost over its income? Or why, in fact, should any one pay taxes to make cheap bags, more than for any other production? If it is admitted that the farmer should have a special benefit over any one else, it would be much more simple to give him a rebate on his taxes or a premium on his productions rather than by a preference in buying bags.

In case of high prices and a corner in bags, it would no doubt be in the interest of many for the prison authorities to allow an accumulation of stock, and at the opportune moment put the bags up at auction with due notice and in moderate-sized lots and sell to the highest bidder, and thereafter, during high prices, make weekly offerings until the market drops, and then withdraw from the market and accumulate stock again to meet another rise. In this way the farmer would be benefited largely by not having to pay extreme prices, and the remainder of the tax-payers would be benefited by a good profit on the whole product. The farmer's agent would be on hand to profit from such sales, and all would have an equal opportunity to buy when and as much as they chose, while those neglecting the opportunity would have no cause to complain.

It would be economy for the State to pay a moderate commission to an auctioneer to dis-

pose of all the prison product in this way rather than to take the chances of a political agent's methods of sale and distribution.

There are two very important questions in connection with prison management besides the matter of punishment for crime. Those are the health and lives of the prisoners and their education to some useful employment that will give them a chance to make an honest living after their term expires.

It is conceded pretty generally that an idle life in prison is harmful in every way and a greater terror to the prisoners themselves than almost any other punishment. Nor is it justice to the honest laborer outside to be compelled to support prisoners in idleness.

The making of bags is not one of those industries that will assist the prisoner materially when he is free, and therefore it is of doubtful utility to instruct any very large portion of them in bag-making, to the exclusion of other trades that would be of more value to them. Stone-cutters are more in demand and get higher wages than almost any other class of artisans, and there is no reason why they should be protected by the State in securing \$5 or \$6 daily, when the average common laborer gets only \$1 or \$2. The erection of stone buildings on this coast is practically prohibited by the high price of labor, and the employment of a large number of prisoners in this direction would be to their direct benefit as well as to the State at large by encouraging the use of stone for building purposes.

The manufacture of sash and doors has proven profitable and does not interfere seriously with manufacturers outside of the prison, and is a trade that will be valuable to the prisoner. So there should be no objections to continuing that business, and no doubt there are other uses for the labor of the prisoners that would assist materially in working their reformation by their learning a trade through which a good living may be obtained after they have left the prison, and thus adopting the principle of providing artisans in preference for those callings that are needed most in the State to equalize the price of labor.

R. G. SNEATH.
Jersey Farm, San Bruno.

The Foothills.

The following valuable article was written for the Marysville Appeal by Prof. E. W. Hilgard of the State University, who is the highest scientific agricultural authority on the Pacific Coast:

"In the olden times, the foothills were pointedly contradistinguished from the valley country, as a region fit only for the miner, and of little interest to any one after being mined out, being practically dependent upon the valley for its supply of food. Like the great American desert, this idea has been dispelled by the light of experience; and now the foothill country bids fair to outshine the valley lands, not in the quantity, but pre-eminently in the quality of its fruits. Not only is the 'abomination of desolation,' created by the hydraulic and placer mining, fast being hid under a renewed forest growth, but the orchard and the vineyard are spreading over the well-subsided, gold bearing red earth, and yielding their choicest products.

"It was early found that the small valleys within the foothills would produce fine crops of grain and vegetables when irrigated, and many a small 'patch' of this kind made the fortune of its possessor during the early times when salt chunk and beans were the staple food of the mining population. But the water was mostly pre-empted by the miners, and without irrigation it was thought useless to attempt cultivation. At first only a few venturesome spirits dared to act contrary to the prevailing popular conviction and plant trees on hillsides, where no water was available, and for a while their success attracted little attention, the more as some of their would-be imitators signally failed of success. But as mining became less and less profitable, the owners of the land thought it worth while to try what could be done, and the comparatively small holdings facilitated and encouraged improvement and experiment, at a time when the large ranches of the valleys were still held sacred to the sheep-herder and vaquero. That the experience thus acquired did not sooner become more generally known, was due to the nature of the country and the isolation of its inhabitants. But it is none the less cogent, and is now being reaffirmed every day.

"The contradictory beliefs still found even in the northern portion of the foothill belt, in relation to the necessity of irrigation for fruit trees and vines, are largely due to real differences in local conditions, which are not duly appreciated by the population generally. In a hilly region underlain by various rock formations there is necessarily much variation, not only in the quality but especially in the depth of the soil. Moreover, the nature and position of the underlying rocks influence in a very decisive manner the moisture conditions of the soils. Where as much as three feet of the red soil overlies the slate bedrock with edges upturned, trees and vines would have little occasion for irrigation after the first season, during which, of course, a more liberal supply of moisture would help them along faster. But when the vertically-bedded rock is once reached the roots insinuate themselves into its moist crevices to great depths, and henceforth have little use for water from above, beyond the natural supply.

But where the soil is shallow, or the rocks horizontally bedded or otherwise too hard for penetration by the roots, the case is different, and irrigation may be called for. The most commonly occurring rock next to the slate is granite; and this when solid is of course an impenetrable barrier. But in most cases it is 'rotten' to a considerable depth below the actual subsoil, and thus affords opportunity for the roots to seek both moisture and mineral food. While then there are many cases in which irrigation is a necessity in the foothill region, yet these cases are the exception rather than the rule, so far as trees and vines are concerned; and I should estimate that fully two-thirds of the foothill land susceptible of cultivation can be readily managed without irrigation, by those who have a proper conception of the use of plow and hoe as substitutes for a deficient rainfall. The actual area available for agriculture within the foothills is very much greater than most persons suppose; and fortunately for the development of the country, it is not convenient for large holdings managed on the plantation plan. It is and should be the special home of a thrifty population of intelligent small farmers, utilizing the valley for bread and forage crops, for their own supply, while using the hills for the fruits to which they are adapted and which they produce in such great perfection. While the deeper and richer uplands will be best utilized for the deciduous fruits and in the proper exposures for those of the citrus tribe, the olive, fig, carob, pistachio, cedar, and other plants of the Mediterranean border will probably occupy many places now deemed too poor or rocky for culture. The fruit-grower will have great need of watching his local climate and will find many surprises, such as, *e. g.*, the best success of the semi-tropical fruits, not on the lower slopes but at the elevations between 1000 and 2000 feet. These matters will receive special attention at the 'foothill experiment station' lately established in the center of the foothill belt in Amador county; but as a matter of fact, were all the local experience had, well gathered together and made generally available, the evidence would surprise even the old denizens of the region.

"In the future, the Sierra foothills will be a close parallel to the Italian Riviera, in the foothills of the maritime Alps, but with American progressiveness to 'energize' its industries."

American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Pleasanton Stock Farm.

A RURAL reporter made a flying trip to the Pleasanton Stock Farm, owned by Mr. Salisbury. It is situated about one-half a mile from the town of Pleasanton and contains 100 acres of rich alluvial soil, with a fine one mile race-track on the side adjoining the town, with stables, corrals and paddocks on the south side of the track. It is used as a stock farm and training establishment.

Mr. Salisbury's stud contains several noted horses, among which are Director, Monroe Chief, Direct, the pacing mare Gold Leaf, with record of 2:15 as a three-year-old, and a string of ten selected standard trotting brood mares who have made records under 2:30, and a majority of which are under 2:21, besides weanlings, yearlings, two and three year old colts in training.

Mr. Sa'sbury's efficient trainer, Mr. Andy McDowell, gave an exhibition of speed with several of the flyers, with a goodly company of home fanciers in attendance. The gamy black stallion Direct, three years old, by Director, trotted a mile without a skip in 2:22, the last one-half in 1:09. Margarette S, two years and six months old, made a trial trip with the pacing mare Gold Leaf, and came under the wire in 2:25 with a skip.

A photo-facsimile of some of the leading animals of Pleasanton Stock Farm, with an extended description of the same, will appear in the RURAL this season.

Cheap Money for Farmers!

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, 149 Powers Block, Rochester, N. Y.

Picturesque Californian Homes.

Vols. 1 and 2, each containing 40 plates, plans, details and specifications of houses—City and Country Homes—costing from \$700 to \$15,000, and adapted to families having good taste and moderate means.

This work is designed to meet the wants of that large number of persons who have but a limited amount of money at their command, and in building a home wish to use it to the best advantage. Drawn by Samuel and Joseph C. Newson, Architects, San Francisco, who have taken much pains in its preparation, and confidently assert that mechanics, clerks, salaried men, workmen of every calling contemplating building, carpenters and builders in cities, towns and villages, will find this book a useful aid, worth many times its cost in the information and practical suggestions which it gives.

The Plans are clear, and finely drawn on Lithograph Plates, and handsomely printed; size, 9x13 inches.

Subscribers to this paper (old or new), who pay one year in advance of the date of application for this premium, can have the same by paying 50 cents additional for Vol. 1 (bound in paper), or 75 cents for Vol. 2 (bound in cloth). Sent by express unpaid, or on receipt of 60 or 80 cents.

For Coughs, Colds, Croup, Asthma, Bronchitis, Influenza, Loss of Voice, Incipient Consumption, and all Throat and Lung Troubles. J. R. GATES & CO., Proprietors 417 Sansome St., San Francisco.

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY
presents many and important advantages as a
Home Agency over all others, by reason of long
establishment, great experience, thorough sys-
tem, intimate acquaintance with the subjects of
inventions in our own community, and our
most extensive law and reference library, con-
taining official American and foreign reports,
files of scientific and mechanical publications,
etc. All worthy inventions patented through
our Agency will have the benefit of an illustra-
tion or a description in the MINING AND SCIEN-
TIFIC PRESS. We transact every branch of
Patent business, and obtain Patents in all coun-
tries which grant protection to inventors. The
large majority of U. S. and Foreign Patents
issued to inventors on the Pacific Coast have
been obtained through our Agency. We can
give the best and most reliable advice as to the
patentability of new inventions. Our prices
are as low as any first-class agencies in the
Eastern States, while our advantages for Pacific
Coast inventors are far superior. Advice and
Circulars free.

Seeds, Plants, Etc.

A VEGETABLE WONDER!
HENDERSON'S NEW BUSH LIMA BEAN.
Can and Should be Grown in every
Garden on the Continent.
Of all the Novelties in Garden Products
ever sent out, there is nothing so entirely distinct
and valuable as this **New Vegetable.** The
old Lima Bean can only be grown on poles,
while the **NEW BUSH LIMA** grows and is
cultivated exactly like the common bush or snap
bean (growing only 18 inches high), and from
the time of its bearing in July, produces in
abundance delicious Lima Beans through out
the entire season until frost. It has, besides, an
additional value, in that it is **two weeks**
earlier than any other Lima Bean, being fit
for the table in from forty to fifty days from
time of planting.
Price (by mail) 25 cents per packet,
5 packets for \$1.00, 12 packets for
\$2.00 (12 packets sufficient for an
ordinary-sized family for the season).
Directories for growing on each packet.
Remittances can be sent either by Post
Office Order, Postal Note or Stamp.
\$100.00 in Cash Prizes for single plants
bearing greatest number of pods. For
conditions see Manual offered below.
Every purchaser of Henderson's Bush
Lima Bean will be sent, without charge, our
MANUAL OF EVERYTHING FOR THE GARDEN,
a book of 140 pages, size, 9x11, containing 3 col-
ored plates (the price of which is 25 cents), on
the distinct understanding, however, that
those ordering will say in what paper they saw
this advertisement.

Lands For Sale and To Let.

200 FRUIT FARMS FOR SALE.

Large and small, from five acres up, IMPROVED and UNIMPROVED, at all the best points and in the best FRUIT-GROWING COLONIES in the State, on EASY TERMS.

Special Agent for the NOVATO and MERCED FRUIT-GROWING COLONIES. Address: D. B. WIER, 40 California St., San Francisco.

FARMING and GRAZING LANDS.

5530 Acres; one of the finest ranches in Berryessa Valley, Napa county; a splendid stock farm, with several hundred acres choice fruit land; 300 acres now in grain; plenty of running water; commodious barns, stables, etc.; this property must be sold immediately, and is one of the best investments ever offered in this State; \$8 per acre.

Stock Ranch in Lyon county, Nevada; 5300 acres; title perfect; 400 acres in alfalfa; unlimited supply of water; will be sold with the place—985 head of stock cattle, 60 head horses, 750 tons alfalfa hay and a full line of farming utensils; this is a rare bargain.

10,000 acres on railroad in Colusa county; 3200 acres now in wheat; all level land.

640 acres, 2 miles from Germantown, in Colusa county. Two farms in Sutter county, one of 240 acres and one of 180 acres.

1440 acres in Placer county; all level.

214 acres 1 1/2 miles from Calistoga.

800 acres in Yuba county; \$10 per acre.

1040 acres in Placer county, 8 miles from Newcastle; well improved with fencing and buildings; 200 acres cleared; \$8.25 per acre.

5000 acres in Antelope Valley, Colusa county; 1200 acres cultivated; balance rolling; \$7 per acre; a splendid bargain.

Two bearing Orchards and Vineyards in Sutter county, near Yuba City; 80 acres each; trees 4 and 5 years old; fruit of approved varieties; these are particularly good bargains, and will be sold very low, one-half cash, balance on time, if desired, at reasonable interest.

16,500 acres in Contra Costa county.

670 acres 2 miles from Sonoma.

S. J. STABLER, Flood Building, 809 Market St., room 1.

Agricultural and Grazing LANDS FOR SALE.

7975 Acres of fine grazing and agricultural land, including 4000 head of fine grade stock sheep; abundance of water; 9 miles from Merced City, and near Merced River; price, \$7.25 per acre; 1000 acres good wheat land.

Address OSTRANDER & SONS, Merced, Cal.

Or N. O. CARNALL CO., 624 Market Street, San Francisco, Cal.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities; commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

LANG, MERRITT & DEXTER, Real Estate Brokers.

A LONG LIST OF

Choice Fruit, Farming, Grazing and Colony Tracts.

Address, SALINAS CITY or CASTROVILLE, MONTE-REY CO., CAL.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2381, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the Artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied for soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS, San Francisco, Cal.

QUERIES AND REPLIES.

Interesting Observations on Rattleweed.

EDITORS PRESS:—I have been reading, with some degree of interest, the several articles which have appeared in the RURAL of late in regard to rattleweed, and in some of them the writers seem to be very skeptical as regards its true properties, and although it may be a hopeless task to undertake to convince them to the contrary, I for one can say without hesitation that I am positively certain as to its effects on stock. I have had more or less experience with it for the last 28 years, with sheep, cattle and horses, some of which I gave in the PRESS 8 or 10 years since; I still have plenty of it, but I have learned by experience how to manage it, and while we are at it I will give you my rules for pasturing where it abounds:

First, Do not turn stock in when the feed is poor.

Second, Do not leave them in after the feed begins to dry up in the spring.

Third, Watch them closely during the time they are in, and when you see an animal leaving the band and feeding around alone, take him out right away and you may save him if he is not too far gone, as when they begin to eat it they will eat nothing else and will leave the other stock to hunt for the weed. At first they fatten up, but a reaction soon sets in and then they soon show the effects of the weed.

I have a theory in regard to the way that stock get to eating it first, and that is this: The stock, in feeding among it while the feed is good, will eat the grass all around it and when the feed begins to get a little scarce or dry they will nibble the grass that has been left untouched in among the rattleweed, and in so doing will get a stalk of rattleweed now and then, and as it remains green nearly all the year they soon get to eating it and will eat nothing else. I have not had an animal hurt for several years, but it is because, as I have said before, I have found out how to manage it.

I would also like to state that the water in my pasture is pure spring water and plenty of it, as I see some think water the cause. Others say they are overworked, starved, beat around and in fact never had any sense in the first place and were natural fools out and out. Now this in my opinion is all a mistake. Of course there may be differences in horses and they may not all act just the same, but this much I will say, that if you want to make a horse, cow or sheep crazy give them plenty of rattleweed.

I will now give you one case that came under my notice. I turned my colts in a pasture adjoining mine in which there was one patch of rattleweed. The feed was not very good generally, but along the gulches and in places where it was sheltered it was very fair. I did not dream that they would trouble the weed, and as I was busy I did not pay much attention to them. Now there was among the colts an old American mare that had crossed the plains; she was a family nag, any one could drive her and she would work any time and anywhere, and I thought she had plenty of good horse sense. Well, I went over one day and there was the old mare and a two-year-old colt up on that hill busy at work eating the rattleweed. They had even pawed up the ground and were trying to eat up the roots, and they were good and crazy and no mistake. The other colts were all right. I then took the colt and old mare out and put the colt up and fed him awhile and then I sent him away to pasture where there was no weed, and in the fall he seemed to have recovered from the effects. I then brought him home and turned him out among the other horses in the stubble. In this stubble-field there was a hill and on it some rattleweed. I did not think he would leave good feed and the rest of the stock, so I paid no attention to him. I then went away to work and did not come home for two weeks, and found my colt up on the hill busy at the rattleweed and as crazy as a bedbug. He was a total wreck, he could not walk straight nor go downhill without turning round and round. Of course I saw he was done for and let him die, which he did in a short time. I have other cases that are equally convincing, but think I will not burden you with too much at once.

Suisun, Cal.

A. A. DICKIE.

"A ROSE BY ANY OTHER NAME."—The Pasadena Star says: A citizen who happened to be riding in a street-car yesterday with a couple of strangers, overheard one of them gravely remark as he pointed out a blue gum beside the road: "There's one of those erysipelas trees!"

NEW CARRIAGE REPOSITORY IN STOCKTON.—The H. C. Shaw Plow Co. of Stockton have opened their new carriage repository, 40x150 feet, and will continue to carry an increased line of all kinds and grades of buggies, carriages and farm wagons.

EXCELLENT lime is made at San Jacinto. The company there is now sending out 100 barrels a week and expects to treble its output before next summer.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

Engraving as an Art.

A series of most interesting and instructive lectures and conversations are now being given by Mrs. C. D. Adsit, at Union Square hall, in this city. The fifth of the course was given on Thursday afternoon, the 7th instant, the special subject being "Mezzotints and Stipple." The series consists of 12 lectures, and was preceded by a free preliminary lecture.

Conversations on the subjects treated in the several lectures are given on the days succeeding the lecture at the parlors of the Woman's Educational Union, at 325½ Geary street, at which conversations many of the choicest works of the old masters are shown, so as to be freely examined and studied and discussed by all.

The series of lectures is divided into topics and in order as follows: 1. The Engraver's Art. 2. Wood Engraving. 3. Line Engraving. 4. The World's Great Engravers and their Masterpieces. 5. Mezzotints and Stipple. 6. States of Plates, or What a Proof is, and What it is Not. 7. Etching—its Etymology and Technique. 8. Practical Illustration—a plate etched before the audience. 9. Comparison of the Etched Line with the Engraved Line. 10. Conventionality of Art—Hader and his Works. 11. What Good Drawing is and What it is Not. 12. Qualities that Make the Great Etcher.

From this division of subjects, it will be seen that the art of engraving is thoroughly considered in its technique and bearings. Each lecture is profusely illustrated by numerous engravings from the great masters in the special line which forms the topic under consideration for the time. This collection of engravings in the possession of Mrs. Adsit is of the very highest class and valued at over \$50,000.

The lectures increase in interest as they proceed, and the attendants become more and more interested with each succeeding topic. The public of this city have never before had such an opportunity to become acquainted with this interesting branch of art. Mrs. Adsit has lectured in most of the principal cities of the Union, and previous to visiting this city has given her course in San Jose and before the Ebell Society of Oakland. Her knowledge of the subject is perfect and her expositions simple, clear and full. She has in her possession examples of nearly all the great masterpieces of the engraver's art, from Rembrandt to those of the latest date. Some of them are of high value. One piece, entitled "Ecce Homo," Rembrandt's great masterpiece—about 12 by 16 inches—is valued at \$1000.

It is by means of this valuable collection—the most extensive and costly ever brought together in the United States—that she is enabled to so fully and perfectly illustrate her admirable series of lectures.

Mrs. Adsit, we believe, makes no especial claim as an artist, but is a most thorough and intelligent art critic. She has made the engraver's art a study for many years, and has been aided in her studies by having free access to most of the celebrated art-galleries and art collections of Europe, both public and private, and has also met personally many of the leading artists and art connoisseurs now living. Her criticisms and opinions have been received with much favor in leading journals of both Europe and America. She is extremely happy and familiar in imparting instruction and always infuses her own enthusiasm into the minds of her audiences. She is particularly gifted in this connection, while her methods are quite original. She puts herself in perfect rapport with her hearers, and makes it a practice to hear and answer questions in a familiar manner after each lecture. Her conversations the day following her lectures are particularly enjoyable and instructive.

The attendance upon her present course is small, but especially select. It is to be hoped that she will be requested to repeat her course in this city, and that her lectures will be more largely attended than thus far. We are pleased, however, to state that the interest in her work is increasing, as is evinced by the new faces which are beginning to appear as the same progressors. The next lecture will complete one-half of the course, and half course tickets will be issued after that time for \$2.50 for the remainder of the series—the whole series being \$5. As this half course will take up the full subject of etching, it will be found both very instructive and interesting, as may be seen from the program as given above.

The ladies of the Woman's Educational and Industrial Union have done a good work in securing this valuable contribution to art study in this city, and it is to be most sincerely hoped that the Art Association or Century Club will take measures to secure a repetition of the same in aid of the useful and growing interest of art study in San Francisco.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

SUGAR BEETS.—Mr. E. Sa'z of Decoto leased five acres of land near this place at a rental of one-third the crop. The yield was 27 tons per acre, which at \$4 per ton gave \$36 per acre rental.

State Horticultural Society.

S. J. Stabler presided at the meeting of the State Horticultural Society on March 1st, until the arrival of President Hilgard. C. S. Aitken of Berkeley and Wm. Cluff and B. N. Rowley of San Francisco were elected members of the association. Samples of apples from James Waters of Watsonville, with a letter requesting the society to determine their variety, were referred to a committee consisting of James Shinn, C. W. Reed and Leonard Coates, who declined to make any positive assertion as to variety.

The names of George F. Weeks of San Francisco and C. A. Wetmore and John H. Wheeler of Livermore were presented for membership, to be voted upon at the next meeting.

C. A. Wetmore presented his views on Senate bill 611, now pending, which contemplates the abolishing of all the agricultural commissions and establishing in their place a Department of Agriculture at Sacramento. Mr. Wetmore strongly opposed the proposition, which was also pronounced against by Prof. Hilgard, Judge Stabler, Senator Buck, Eilbert Tompkins and others.

On motion of B. N. Rowley, a committee was appointed, consisting of Messrs. Rowley, Buck, Tompkins, Stabler and Bancroft, to draft a resolution, which was adopted, as follows:

WHEREAS, Senate bill No. 611, an Act to establish a Department of Agriculture, is opposed to the best interests of the horticulturists of this State; therefore, be it

Resolved, That the California State Horticultural Society, at its regular meeting, held to-day, strongly urges the Legislature not to pass said bill, as it will overthrow much valuable work, and it is entirely unsupported by those who have at heart the best interests of our horticultural, viticultural and agricultural industries.

It was decided to telegraph copies of the resolution to the President of the Senate, Stephen M. White, Senator De Long, and to Secretary Lelong of the Horticultural Society, now in Sacramento.

John T. Cutting, by request, read a paper upon the marketing of dried fruits, which was heard with much interest, and to which we will refer at length at another time.

Remarks on the shipment of fruit were made by Senator Buck, Dr. Handy, James Shinn, J. S. Robertson of Minneapolis and others.

W. H. Aiken, chairman of the Committee on Railroad Rates, said that he was hardly able to report yet, but thought he would be able to do so about April 1st. The railroad authorities were not able to give any definite information, but he was not sanguine that any material reduction would be secured.

The Olive.

On motion of A. L. Bancroft the subject of the olive was chosen for the meeting of March 25th, and B. M. Lelong was invited to open the discussion. The line of discussion to be followed at the meeting will be as follows:

Upon how cheap land can the olive be successfully grown?

What kind of land is the most economical—dry or moist—hills or flat land—rocky or loam?

Distances to plant trees; advisability of putting out vines between the trees; amount of cultivation required, and how to prune the trees.

The climate best adapted to the olive; the pests which interfere with it. Do hares, squirrels and insects prey upon it?

The age at which the trees bear sufficiently to pay the expenses of cultivation. The vigorous bearing life of the tree.

The uses made of the fruit; how to gather and handle it.

Question-Box.

The following amendment to the by-laws, proposed by Mr. Bancroft, will come up for action at the next meeting:

That there be added to the order of business, to come immediately after the stated discussion, and before the subject for the following meeting is decided upon, "Questions and Answers," which shall consist of questions and requests, either written or verbal, for information by members for responses by other members of the society, and that this item of business be announced regularly as it is needed in its order.

Mr. James Shinn exhibited a sample of very handsome Navel oranges grown on his place near Niles, in Alameda county. On motion, the society adjourned.

PUMPS AND HAYING TOOLS.—F. E. Myers & Bro. of Ashland, Ohio, whose advertisement appears on another page, sends us a descriptive catalogue and price list of the goods which they are turning out at their immense factory—said to be the largest and most thoroughly equipped in the country for the exclusive production of double-acting force pumps, haying tools and supplies. Beginning on a small scale in 1870, their plant now embraces half a dozen brick buildings—brass and iron foundries, machine-shops, etc.—which, with the machinery they contain and the ground they occupy, represent a large invested capital. The repair lists and alphabetical index are noticeable features of this clearly illustrated and interesting catalogue, which those in need of such goods will do well to apply for by mail.

A GOOD SUBSCRIBER.—O. H. Ferris of Tustin City lately sent us four boxes of Navel oranges—big, fair and luscious—which found their way into several households we wot of, and every one who has had the pleasure of putting them to the final test agrees that he who supplies us with such fine fruit is a good subscriber.

Inducements to Subscribers

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, IF REQUESTED the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25
- 2.—Beautiful Poetic Review, entertaining and instructive; 35 pages (a handsome and pleasing present).....25
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

Inform your neighbors about our offers and paper.

For New Subscribers—Something New and Rare.

PACIFIC COAST RELIEF CHART.

PHOTO FAC-SIMILE.

With subscription paid one year in advance for this paper, and 10 cents to pay postage and mailing tube, we will send a fine Photoplate Relief Chart of the Pacific Coast, embracing California, Nevada, Oregon, Washington Territory, and part of Montana, Idaho and Utah. Photographed from a topographical relief model in plaster 15 feet 3 inches by 5 feet 6 inches in size, made recently by Isaac Winston and Prof. Geo. Davidson (the latter Chief of the U. S. Coast Survey on this Coast for the past 20 years).

While it does not take the place of an ordinary map, it illustrates, comparatively, the elevations and depressions of the principal mountains, valleys, rivers, lakes, ocean and bay-shores of the Pacific States and Territories, and makes a permanently useful, handsome and desirable picture for either library, office or home.

The charts are 19x24 inches, well suited for framing, if desired. It is as handsome, and even more durable, than an ordinary photograph. Seldom is so choice an article offered as a newspaper premium. Sent to old subscribers on the same terms on paying one year in advance of current date. Subscribe and secure this permanently valuable chart.

Address Publishers of this paper, No. 220 Market St., S. F.

It is estimated that 600,000 fruit trees have been planted in San Diego county this season.

Important Sale

—OF—

F. ROEDING, Proprietor, Box F, Fresno, Cal.

Bless Your Souls! My brother farmers, why pay 10 or 20 cts. for a seed catalogue, when you can receive one containing just as many and very probably more varieties, and in new vegetable tables that are really valuable, for just NOTHING? It may have less paint about the covers, but, great Scott! we are not after paint, but seed, fresh and true to name, such as will make with a master's hand his own picture all over our farms and gardens; seed I can guarantee to be **WATERBURY** on the cover of my catalogue. Come, my fellow farmers, and join the thousands who for thirty years have been users of my seed; why, we were a goodly company and having pleasant times together before the great majority of the present race of seedsmen (bless the boys who have left their honest trade!) Send for a catalogue.

A Standard-Bred Stallion.

We adorn our opening page this week with an attractive sketch introducing a portrait of the standard-bred stallion Campaign, the property of L. U. Shippee and W. H. Parker of

Stockton, Cal. The position of Electioneer, well termed the "favorite son of Palo Alto," is so well defined that the name speaks volumes to horsemen. His roll of honor with 11 of his get with records from 2:20 down to 2:16, and 28

recognized, and is in fact the basis of pure breeding. It is, however, too often that one is apt to be dazzled by the glory of a sire and forget the element of uncertainty of transmission which may be due to unfixed type in the dam. We have heard an old horseman say

the descent of Campaign on the side of his dam, which is, in brief, as follows: First dam Lily B, by Homer, 1235; second dam Maggie Lee, by Blackwood, 74; third dam by Alexander's Abdallah, 15.

The descent of Campaign from Homer on the

STANDARD-BRED STALLION CAMPAIGN OWNED BY L. U. SHIPPEE AND W. H. PARKER, STOCKTON, CAL.

Stockton. Could the artist have introduced the element of color into his portraiture, it would be seen that Campaign is a beautiful dark bay with black points and right hind foot white. He stands 16 feet high and weighs 1125 pounds, and was foaled in 1886.

When it is said that Campaign was sired by Electioneer it is hardly necessary to add any-

others in the 2:30 list, is too well known to need more than reference. The value of Campaign's pedigree on the side of his dam is possibly not so well known and will warrant comment.

The value of concentrating quality in an animal by selection of both dam and sire with similar ruling aims is, of course, generally

that the chances of securing superiority by selecting a progenitor according to his sire alone estimated as one to ten, and the chances when both sire and dam are alike bred in a desired line, as one to two. Whether these proportions are accurate or not cannot be said, but the truth is in that direction. For this reason we deem it important to speak especially of

side of his dam makes pertinent the following appreciative mention of Homer, which we find in Wilkes' *Spirit of the Times*:

Homer is a black son of Mambrino Patchen, foaled 1872, standing 15 2½ hands high, and weighing 1200 lbs. Homer has all the finish and symmetry for which his family are noted, and with it a certain stoutness of build that

(Continued on page 257.)

CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

Calaveras County Again.

EDITORS PRESS:—In the issue of March 21 of the RURAL, E. H. Schaeffle, writing from Murphys, Calaveras county, claims to have discovered errors of fact in my letter to the RURAL of Feb. 9th, but what these erroneous statements are, he has wholly failed to point out. He says that in future he will try to show the reader "that there are several systems of irrigating ditches in the county, and that a visit to those sections will prove that there is a large area of land capable of being irrigated."

If by this he intends to assert that I have denied the existence of irrigating ditches, I will call the attention of the reader to a quotation from the third paragraph of my article where just the contrary is stated: "In some districts irrigating ditches have caused the blossoming orchards to spread far and wide over the sunny slopes, and in the rich meadow-lands, as at Knight's Ferry, Valleito, Angels and Murphys." How this could be construed into a denial of the existence of irrigating ditches I have failed to discover.

Neither have I anywhere said that Calaveras has not much excellent land capable of irrigation; but, on the other hand, have repeatedly referred to the choice spots "favored of nature for the culture of the peach and grape." In the third paragraph, already alluded to, I have called the natural advantages of Calaveras nearly equal to those of Tuolumne, which is conceded to be magnificently adapted to the culture of fruit. If allusions to the "fertile uplands, the rich hillsides that invite the vine and berry, the alluvial vales, and the sheltered valleys," can be interpreted to mean that there are no irrigable lands in Calaveras, then I admit that I am guilty of mistaking facts.

Nor can I understand how the statement that "this region is almost unequalled for fruit culture" can be reconciled with the idea that it is not suitable for fruit, although Mr. Schaeffle informs the readers of the RURAL that if there are any doubting Thomases (who have presumably understood me to assert that there are no advantages for fruit-raising) he will "show them lands suitable for fruit."

Since these are the only facts mentioned in Mr. Schaeffle's article, which appear to him to be faulty, and since he has not shown me wherein they are so, or in what particular they differ from those which he considers to be true, I feel that he has dealt unfairly with me in publicly accusing me of errors which he does not define.

However, I believe that Mr. Schaeffle after all has only obtained a wrong impression from my article because of the comparison of Calaveras with Tuolumne, which is really far ahead of the former county, both in its production of fruit and in its facilities for irrigation. This can be abundantly proved by reference to the horticultural reports of these districts, and also readily seen, if one will but consider the canneries and the large fruit-drying and cider-making establishments in Tuolumne, of which there are only a few in Calaveras. But I did not draw the comparison for the sake of placing Calaveras in an unfavorable light. On the contrary, I tried to show that her natural advantages were quite as good as those of Tuolumne, so that her people might perhaps more earnestly strive for her development. Because I stated that the mining ditches had often "chanced to flow" through rugged ways (which to my own personal knowledge is entirely true), I did not deny the existence of better paths, but only felt this fact to be an excuse for the position of Calaveras when compared with Tuolumne, because the objects of the people of Calaveras in constructing canals have not often been to raise fruit. This is officially reported: "Comparatively little of the water supply (of Calaveras) is used for purposes of irrigation consequent upon the demand for mining purposes."

In conclusion, I will say that all the features of Calaveras and Tuolumne—ditches and fertile lands included—are more familiar to me than any other portion of the globe. In those well-loved hills I have spent by far the greater portion of my life, and besides have made yearly visits to nearly every little town within their borders. During both 1887 and 1888 I made extended tours over both counties with the sole object of gathering material for the Eastern and San Francisco press, my reports to the latter including letters to the RURAL PRESS, the Chronicle and the Call. I have written all my communications from personal knowledge, and have tried to be as accurate and just as possible in every statement, for which heretofore I have always been rewarded by numerous letters from the people of Calaveras and Tuolumne commending my conscientious efforts to aid in their welfare and advancement.

MAY BLOSSOM DAVIS.

San Francisco, March 4, 1889.

RAILROAD CROSSINGS.—According to the report of a Massachusetts legislative committee, all the grade crossings of railroads in that State must be abolished. There are 2902 intersections of highways and railroads, and to carry out the purposes of the law would necessitate the expenditure of \$48,000,000.

THE APIARY.

Moths, Hives and Hybridization.

EDITORS PRESS:—The mothworm is regarded as the worst enemy of the Californian bee-keeper. Undoubtedly this is true where allowed to have its own way. But to become a successful bee-keeper it is necessary to use cleanliness and give your stock a certain amount of attention, and when neglected in these two respects, you will soon find something going wrong. I have heard of cases where apiarists have given up bee-keeping because the mothworm destroyed their bees. Such cases are due either to carelessness or ignorance. Only lately I bought an apiary of black bees, and one-third of the hives were so badly infested with mothworms that it was impossible to remove the honey-boards without breaking them; they were so tightly glued down by worms, and I was obliged to tear out the frames and combs and burn them up. The owner had hived his swarms into hives that were infested with the mothworms, either through carelessness or under the impression that the bees would clean them out.

Whenever your bees die in a hive or desert it, close up the hive at once, or carry it indoors out of the way of moths and robbers. There is no danger from the worms in the fall, winter or spring, as they cannot develop unless they have a summer temperature, but they will live a long time in a dormant state, and if allowed to stay in the cracks or crevices in the hives, will commence their work of destruction when the temperature favors their development. If you keep only Italians or even all hybrids, you may go over a hundred colonies and not find a trace of the mothworm. At the very low price at which Italian queens are now to be purchased, it seems we shall soon forget that the bee-moth ever existed, and the best way to prove the truth of this assertion is to take an infested comb and hang it in the center of a full hive of Italians. You will find all the bees and worms carried out at the entrance and the comb cleaned up in a couple of hours or so.

The Best Hive.

In reply to Mr. Phelps' letter under the above heading in your last issue, I would recommend the hive known as the Langstroth. It is the hive most generally used in California, and is the kind we use. It is easy to make, easily handled and is not patented. We find it equally suitable for comb or extracted honey and for queen-rearing, etc. The frames are easily handled, being of a convenient size. If Mr. Phelps wishes to adopt this hive, I have no doubt he will be able to get a pattern from some bee-keeper in his locality; if not, I shall be glad to send him drawings and a description of the hive by mail.

Whatever kind of hive is decided upon, he should have them all to take the same-sized frame, so as to be able to change a frame from any one hive to any other in the same apiary. When his hives are made he should get comb foundation and fit it into the frames which will insure straight combs (the main secret of success in modern bee-keeping). I shall give instructions to beginners from time to time in the columns of the RURAL that will be of interest to Mr. Phelps, and shall be glad to give any further information, if desired.

Bees and Fruit.

In addition to the very able letter written by your correspondent, W., in your last issue, regarding the fertilization of fruit blossoms by bees, we have in the same issue a letter signed J. R. Springer, Woodland, which is a proof of the efficacy of cross-fertilization undoubtedly performed by the agency of bees. Mr. Springer (speaking of almond trees) says: "I will say that the Standard and Languedoc, planted alternately, will yield double what they will if each is planted by itself. I saw that at Mr. W. W. Smith's at Vacaville last June. He had 12 trees in a row—6 Languedoc and 6 Standard—and where the two varieties were the nearest the trees were the heaviest loaded, and the farther away the lighter." The reason for the above is obvious: the bees working on the trees nearest together would naturally cross-fertilize more of their blossoms than those at a distance, hence the desirability of planting the two kinds together.

Many kinds of fruit depend entirely on the agency of bees in fertilizing the flowers to enable them to produce fruit at all. It is a well-known fact in the Eastern States that unless they have a few hours of sunshine when early cherries are in bloom they get no fruit at all. The reason is plain; when the cold wind and rainstorms prevail the bees are unable to get out, and consequently the blossoms remain unfertilized.

W. STYAN.

San Mateo, Cal.

Advice to Bee-Keepers.

In their annual review of the California honey business, Schacht, Lemcke & Steiner of this city advise apiarists as follows:

As to quality, the last year's crop was choice, but unfortunately much of the "extracted" was packed in unsuitable cans and cases that had been used for coal oil, etc., which caused many complaints and some losses to shippers and

dealers. Apiarists should be more careful and use nothing but new cans and cases, and the nicer and stronger they are the better. The cans and cases should also be strong and good, especially those that are shipped long distances; then there would not be so many complaints nor so much loss from breakage and leakage, etc.

All comb honey, or at least the greater part, should be in one-pound sections. It sells far better and is much more attractive in other respects than when in larger packages.

It will be found to the interest of the producers of honey to attend to this; it of course will cost them something to change the hives and frames, but it will pay them well for doing so in the end. California comb honey is equal, and even superior, to Eastern in all respects, but it does not command as high figures because it is not put up with as much care and in as attractive style. Two-pound frames are too large and are not in favor in the Eastern markets. Our apiarists should imitate and not be excelled by their Eastern brethren. If they attend to this as they should this season, they will have no cause to regret the expense.

A Description of a Hive.

EDITORS PRESS:—At the request of Mr. Phelps, we would recommend the Simplicity hive, it being used largely by many of the leading apiculturists, is not patented and is adapted to the warm climate of California. It is of the following dimensions and built in two sections of equal size, viz.: (inside) length 18 inches; wide, 14½; deep, 9½ inches. Frames hang lengthwise from a rabbet ¾ inches across the top of the ends. If you wish to avoid killing bees, drop the rabbet another one-eighth and nail a strip of zinc or heavy tin so that there will be one-eighth space under the ends of the frames and the bottom of the rabbet. The bottom of the hive should project two inches in front for an alighting-board; the top should be watertight and the hive, when set in position, to have an incline of 1 inch toward the front or entrance, which is an opening ¾ by 3 inches in the end at the bottom. The frames are of inch stuff by ¾; top 19 inches, end 8 inches, bottom 17½ inches over all. The end pieces fit between the top and bottom. There are 9 frames in the brood-nest or bottom section; 38 above in top box. The top and bottom are exact duplicates, as we use them for extracted honey; for comb many prefer a shallow top for one tier of sections, say five inches deep. For lumber use inch pine dressed on one side at least, which should be inside.

Place the hives on a stand and shade them.

The request for other information seems intricate. We would recommend the purchase of some standard work of recent issue. W. Bakersfield, Kern Co., Cal.

A Queer Hive.

EDITORS PRESS:—A very novel and curious bee-hive was discovered recently at Dutch Corners. It consisted of a straw-burning engine, which a swarm of bees had taken possession of as their home. Every attempt to dislodge them had failed, and horses and people were often stung by them. The engine was stored in an open shed facing the road; hence it was very desirable to get rid of the bees.

The proprietor of the Dutch Corners' hotel offered me the bees if I would take them. Accordingly I went at it, and in a few minutes had them safely hived in a box. I moved them 80 miles and set them up. On being liberated they immediately went to work.

There were in the engine about 14 pounds of honey of a very fine flavor and nearly pure white, made from alfalfa, of which there were large fields near by. The means of capturing them was simply smoke and water. After capture I found the queen and clipped her wings, and all trouble was over.

Now we will see what they will do up the San Joaquin valley, under the Kings river and San Joaquin canal.

E. L. DICKINSON.

Central Point, Merced Co., Cal.

POULTRY YARD.

Hints from the Cackler.

Green food is one of the essentials that must be present to obtain a large number of eggs. The climate of California is such that no breeder is excusable for denying his fowls a regular supply. A grass range is good, but we think that taking the year round it is better and more economical to raise the feed and give it the fowls regularly. During the winter or rainy season all kinds of grains will grow freely, and during the summer or dry season alfalfa is perhaps the best plant to raise. It is eaten in preference to grass, and is not surpassed for rabbit feed. Apricot leaves are highly relished, and are easily gathered by those who have the trees.

Because ducks love water it does not follow that they thrive best in wet situations. To induce early laying, ducks should have a warm, dry shelter during the night, and should not be allowed to go into the water at all. We formerly held the opinion that ducks would prove

healthier and produce better fertilized eggs and stronger young if allowed their liberty on running water, but later experience has proven the contrary by some practical duck-raisers. The fancy for fine ducks is not receiving the attention that it should in a country so well adapted to their culture as California. Their wants are so simple, and they are so hardy, grow so rapidly, and sell so readily, that we wonder why more do not enter the fancy.

The original Douglass mixture was made by dissolving eight ounces of sulphate of iron (copperas) in one gallon of water, and add one-half fluid ounce of sulphuric acid. Mr. Douglass, the originator, now prefers a mixture which he makes as follows: Two ounces sulphate of iron, and one-half ounce diluted sulphuric acid; stir with a stick; add hot water until dissolved; when cold, add enough water to make a gallon; keep in an earthenware or glass vessel. A teaspoonful to a quart of water makes a strong tonic.

Keep a pedigree-book; it is always useful, and in breeding for color is indispensable, and but little trouble to keep if once started.

I have experimented with eggs kept for various periods, and found that eggs will hatch well after being kept for a considerable time if they are kept at an even temperature, or as near to that as may be convenient, and turned every day or two. On one occasion I had a favorite hen from which I wished to procure a setting of eggs. I put her with a black-red stag, also a favorite. The hen only laid every other day, so that it took nearly four weeks to get the 13 eggs. By the time I could procure a hen to sit on them, the first laid egg of the lot was 40 days old. Every egg of the 13 hatched, and I succeeded in raising all—nine stags and four pullets. I kept the eggs in a cigar-box on the top of a cupboard in the kitchen; there was a fire in the kitchen daily, but the doors and windows were open most of the time, as it was during warm weather in May and June. When I put a fresh egg into the box I turned all the rest; this, of course, does not prove that all eggs will hatch if kept for a long time, but it is one of many instances in which I have had eggs hatch that were thought to be too stale to produce life. I believe that with a little care eggs may be kept at least two months at any season of the year and hatch, and if they do not hatch they were never fertile.—L. E. Mattoon.

THE IRRIGATOR.

A Proposed General Irrigation System.

EDITORS PRESS:—The irrigation problem is one of immense magnitude. Since the earliest stage of human existence it has attracted the attention of its greatest minds. History informs us of the heroic deeds of the Spartans; of the rise, prosperity and fall of Rome and other mighty nationalities. We also read of the heroic deeds of our own ancestors in establishing a firm basis for a mighty nation. It has prospered and grown until it has taken its place among the mighty nations of the earth, and if we as sons and daughters of noble sires who bequeathed to us this noble heritage will but follow their teachings and examples, ever bearing in mind that right, justice and equity are mightier than the sword, our nation will continue to grow and increase in greatness.

One of the imperative essentials to our prosperity and happiness is to make the very best obtainable use of our natural surroundings. Agriculture is the foundation—the "chief corner-stone" of humanity. It furnishes the only means of life to all, both high and low. The importance of agriculture, as the human family increases in numbers, is being brought more directly to the notice of thinking minds, and the necessities of the surroundings are made more apparent. The demands of the tillers of the soil are beginning to attract some of the attention they deserve.

Congress has recently appropriated the sum of \$100,000 to investigate and report upon the advisability of establishing a general system of "Water Storage" throughout the United States.

It is reasonable to expect that our State will be included in the investigation. The foothills of California are entitled to a share in the surveys that may be made. The natural formation of the foothills and the higher mountains of the Sierra Nevada system, with its immense lakes and living streams of pure, sparkling water, together with the immense area of arid plains lying on the verge of the great valleys of the Sacramento and the San Joaquin, certainly will attract the attention of the commission in charge of the investigation. From this source, however, we cannot expect relief for some years to come.

What the farmers and miners in this region are mostly in need of is a bountiful supply of water, and we want it now both for irrigation and for manufacturing purposes. More than enough water and snow falls during the rainy season to supply all necessary wants. Storage reservoirs can be constructed in favorable localities, at a comparatively small cost, sufficient for present needs.

The following proposition is hereby presented with the firm conviction that it is a step in the right direction. By an Act of the Legislature, authorize the State to issue bonds to the amount of \$1,000,000 at five per cent or less to run for ten years, thereby creating a fund

to loan to the land-owner in sums ranging from \$500 to \$5000 to be employed in building embankments in favorable localities, and upon his own premises. When completed, the State to establish an annual rate for the use of the water sufficient to pay the amount loaned, with interest inside of ten years. The Board of Supervisors in each county to be authorized to order surveys upon the filing of bonds by the applicant sufficient to cover the necessary expense; the same board to have general supervision of all storage works.

Under a system of this kind, many small farmers would be greatly benefited, the value of the land and its productive capacity greatly enlarged. Much land that is now worthless would be brought into profitable cultivation. Happy homes would soon take the place of arid wastes, and cause them to "bloom as the rose." Our hills and vales would be inhabited by a prosperous people. Schoolhouses and churches would take the place of crossroad saloons and half-way "deadfalls," and every man and his wife could sit in the shade of their own vine and fig tree.

An Act of this character could be framed so as to prevent the possibility of loss to the State, and without an elaborate system would assist the small farmer and fruit-raiser, and in the end a mutual benefit would be secured.

S. C. WHEELER

HORTICULTURE.

The Muir Peach.

EDITORS PRESS:—In your issue of February 2d, Mr. Thompson of Vacaville has an article as full of bombast and sarcasm as an egg is full of meat, and offers it as evidence that the Muir peach is not a seedling.

When I entered this controversy I did so in good faith, as I knew nothing more of the origin of the Muir than I had stated, viz.: That I had discovered the peach at Mr. Muir's. Never having seen or heard of Pool's Late Yellow, I believed the peach I found to be a seedling from the Crawford, and simply called it the Muir.

No one will be more pleased than I to know the true history and origin of the Muir. To obtain this information, it seems necessary to continue this controversy. Mr. Thompson in the Rural of February 2d tells the public that he can give the history of the Muir, and will be most happy to do so in a future article in the Rural. I do not believe that Mr. Thompson can explain or give these historical facts. Hence duty compels me to reply to his article in the Rural of February 2d.

Davy Crockett's motto was, "Be sure you are right, then go ahead." On that line I propose to work it out. I have no ax to grind; no personalities to hurl back at Mr. Thompson; I simply want to get at the facts in the case. Mr. Thompson must take up the trail at Mr. Wolfkill's, where he lost it, and trace it to Mr. Muir's, and prove that the tree had been budded; nothing less will satisfy the public.

It does not take an over-bright intellect to see that his argument does not hold together. There is confusion in it; in fact a flat contradiction. In the Rural of October 13th, Mr. Thompson told the public that I had procured the buds at Mr. Muir's. In the Rural of February 2d he modifies that statement and says he only followed the trail to the celebrated orchards of the Wolfkills on Putah creek, and that here I had got the buds. Now in the name of common sense, which story would Mr. Thompson have the public believe? What we want is historical facts. Mr. Thompson must make the connecting link between Mr. Wolfkill's and Mr. Muir's.

According to Mr. Thompson's own argument, it has been 30 years since the death and burial of Pool's Late Yellow. It lay in the grave 14 years, and 16 years ago it was resurrected by me and named the Muir, when it came forth in all its glory and beauty, possessing a rich and delicious flavor, a perfect gem—the poor man's peach in every sense of the word. It is evident that Mr. Thompson, like the great Pathfinder, Col. Fremont, has lost the trail. It would be well for him if he could call in a second Kit Carson to take it up and lead him out of the difficulty he is in.

Is it possible that Mr. Thompson does not know that 99 out of every 100 of the intelligent and progressive fruit growers have pronounced the Muir the best peach in the State, and have placed it at the head of the list as a canning and drying peach? Then why does he persist in declaring that I have been palming off on the poor ignorant fruit-men a renegade—a worthless tramp of a fruit? Why does Mr. Thompson so vehemently assail the Muir? Does he think all the fruitmen are cranks and cannot tell a good and valuable peach when they see it, or is Mr. Thompson the one and only bright and shining star that can follow a trail?

If Mr. Thompson is correct in the history of Pool's Late Yellow (and all the standard authorities bear him out in it, as quoted by the editor in the Rural of Oct. 13th), then the Muir of to-day and Pool's Late Yellow of 30 years ago cannot be the same peach. To prove that Pool's Late Yellow as described by Mr. Thompson in the Rural of Oct. 13th and Feb. 2d will not apply to the Muir, I dropped a postal to a few of the leading fruit-growers and

dealers to obtain their views of the Muir. Below I give their replies:

What Dealers Think of the Muir.

Allison Gray & Co., 300 Washington St., S. F.: "Have handled the Muir and find it a most satisfactory peach for canners, because of its almost uniform size, its holding together qualities when cooked. It has a very small pit, is very free and is an excellent peach for drying."

Porter Bros. & Co., 404 Davis St., S. F.: "Have handled the Muir for seven years. It is a fine canning peach, and is the best dried peach that comes to this market."

E. C. Newton, Lakeport, fruit-dealer: "Have handled the Muir. It is the best peach that ever came to this market."

Growers' Opinions.

J. R. Springer, Woodland: "I have planted largely of the Muir this season. It is the best peach in this section."

John Sackett, Winters: "Have planted 800 Muirs. It is the best drying peach in the State."

Wm. Sims, Winters: "Have planted 350 Muirs this winter—all the trees I could get."

W. H. Price, Vacaville: "Have 250 Muir trees; as a canning and drying peach it is the boss and stands at the head of the list."

W. D. Rhoads, Winters: "Have 250 Muir trees; it is the best peach I ever saw."

D. H. Waughtal, Winters: "Have 315 Muir trees; it is an excellent peach."

Leonard Coates, Napa Valley Nursery: "I sold over 25,000 Muir trees since I obtained the buds from you. They have gone all over the State. I have 1600 planted on my place. I think as favorably of it as ever, both as a canning or drying peach. It is peculiar in adapting itself to so many different conditions—near the bay, or in the hottest part of the State, it thrives equally well and never curls."

E. Austin, Winters, foreman of H. C. Goodyer's ranch: "Have planted 3500 Muir trees. It is an excellent canning or drying peach."

G. W. Hincley, Winters: "I know of no better canning and drying peach in the State."

W. J. Pleasants, Winters: "Have planted 500 Muir trees; it is the best drying peach I know of. I can handle twice as many Muirs as any other variety with the same number of hands. It is an excellent bearer and never curls."

J. A. Johnson, Winters: "I have 100 Muir trees. I consider it A No. 1 for canning or drying. If I intended planting more trees, I would plant the Muir."

George Graham, Vacaville: "The Muir is a splendid table peach; for canning and drying there is none better."

Tucker & Tubbs, Vacaville: "Have planted 500 Muir peach trees; have dried it and find it A No. 1 for drying."

A. T. Hatch, Suisun: "I think very well of the Muir peach for canning, and it is a good drying peach; one of the best. I have planted 2500 Muir peach trees and prize them among my most profitable peaches."

C. M. Silva & Son, Newcastle: "We regard the Muir in the lead as a drying peach. As a canning variety we consider the Muir better than any we have seen except the Lovell, which we got from you. We had Pool's Large Yellow peach from Rochester, N. Y., and we can see no similarity between this and the Muir on our grounds."

W. & A. Brink, Winters: "Have planted 500 Muir trees; it is an excellent canning and drying peach when properly treated."

G. W. Thissell, Jr., Winters: "Have in orchard 1100 Muir trees; it is the boss peach."

D. B. Derby, Vacaville, agent for California Nursery Co. at Niles: "I sold in this locality (Winters and Vacaville) during the seasons of 1886, 1887 and 1888, 16,000 Muir peach trees. I believe the Muir and Wager are decidedly two distinct varieties. I have them both in fruit."

R. E. Farrington, Phoenix, Arizona: "I have sold 15,000 Muir peach trees since I obtained the buds from you. I find it to be one of the best, in fact I would not exchange it for any other peach. I cannot furnish trees so far to supply the demand. I find they fill the bill as represented in the Pacific Rural Press by yourself and other prominent horticulturists of making one pound of dried fruit from four of the fresh. The Wager resembles it, but ripens a week earlier than the Muir, but the Muir takes one pound less fresh peaches to the pound of dry."

J. M. Robinson, Vacaville: "Have in orchard 1500 Muir trees. For canning and drying the Muir cannot be beat."

James Wilson, Winters: "Have 250 Muir trees. As a canning or drying peach, there is none better; the pit is small and is very free; flesh heavy and rich, and does not dry away much."

John Rook, Niles, President Cal. Nursery Co.: "Have sold Muir peach trees, from the original stock received from you, as follows: In 1886, 11,000; in 1887, 21,000; in 1888, 15,000. Could have sold as many more if we had the stock. I consider the Muir the finest of all yellow peaches, considering flavor, firmness, color, small pit and drying qualities."

Comments on the Evidence.

With all this evidence staring Mr. Thompson in the face, is there any reason or sense in a man trying to prove that the Muir is that worthless Pool's Late Yellow? Can it be possible that the Muir is a horticulture tramp? If so, from whence comes its fresh vitality? May be its Rip Van Winkle sleep in Pomona's bur-

ial-ground generated new vigor. Of course Thompson of Vacaville "can explain" (see Rural of Feb. 2d quoting his own words). Yes, Thompson of Vacaville is already on the trail and fully prepared to explain, and if needs be, in a future article of the Rural will, for the benefit of whom it may concern, be most happy to explain. Mr. Thompson, you owe that explanation to the public. Take up the trail at Mr. Wolfkill's, make the connecting link at Mr. Muir's, and then explain.

In the Rural of Feb. 2d, thirteenth paragraph, Mr. Thompson pauses for a moment, then takes wings and soars away to Persia, then sweeps down through the Roman Empire, then back to America, and for a period of 150 years following all the meandering trails of that worthless Pool's Late Yellow to its final burial-ground; then with a muddled and confused brain throws down the standard authorities in disgust and in wild confusion flies to the foliage, growth and characteristics of the tree in a frantic endeavor to sustain his rotten and flimsy argument. After telling the public that he was on a hot trail, and would be happy to explain, he then, like a drowning man, catches at every straw, in his latter paragraph proposes some time in the future to drag me before a pomological court, and there in the presence of that august body expose my ignorance, and show me up in the true light—blockhead, a crank that knew not what he was talking about. No sir, Mr. Thompson, you assailed the origin of the Muir through the Rural Press, and through the Rural we must settle it.

Winters, Cal.

G. W. THISSELL.

FLORICULTURE.

Easily Grown Ferns.

[Written by DR. LORENZO G. YATES, F. L. S., of Santa Barbara, for the California State Floral Society.]

In all the vegetable kingdom there is perhaps nothing which civilized man has cultivated for amusement or home decoration more satisfactory for the purpose than ferns. They require less care for the results obtained, and make a more continuous display of beauty, thereby paying a larger dividend on the investment than any other family of plants.

The tribe of cryptogamous plants known as filices, or ferns, must necessarily attract the notice and enforce the admiration of lovers of the beautiful in nature, being not only beautiful in themselves, but also adding a peculiar charm to the scenery where they are grown.

Many dwellers in cities and villages, or other localities where ferns are not found in a state of nature, love to cultivate them, often partly as remembrances of pleasant excursions to deep and shady canyons, where the otherwise rough and unsightly rocks were covered and toned down by carpets and screens of beautiful ferns and mosses, and where hours might be spent in admiring the graceful and delicate forms, the luxuriant growth and the agreeable coloring of the living plants, and in gathering specimens to dry for home decoration, or for comparison and combination with those of other and perhaps far distant localities or countries.

Nothing can be more interesting than to watch the development of ferns in cultivation, the plants sometimes throwing up, almost in a day, fine shoots which rapidly unfold their lace-like fronds, giving the observer the result of nature's work, which, though so rapidly disclosed above ground, has taken months of labor for its preparation in the laboratory beneath.

In our day we may enjoy the beauty of the ferns, although they may lack the interest which they were regarded by our ancestors, arising largely as it did from the superstitions connected with them.

It is now pretty generally known that ferns are flowerless plants, developing their seeds or spores on the pinnae of the fronds; but less than 20 years ago the inhabitants of many parts of Europe had not forgotten the traditional belief in the mystic power of fern-seed. In some parts of England there was, and probably is yet, a tradition that the fern blooms and seeds only at 12 o'clock on midsummer night, and that in order to catch the seed, 12 pewter plates must be used, as the seed would pass through 11 of the plates, but be caught by the 12th. Nor do our philosophers teach us as formerly, that demons watch to carry away the fern-seed as it falls, to prevent any person from obtaining it, as it was believed that the possessors of fern-seed were enabled to walk invisible, which accomplishment the demons, no doubt, were anxious to monopolize themselves.

Ferns grown in shady nooks and otherwise unoccupied corners on the shady side of the house, will, if sufficient moisture is supplied, persistently grow and increase, gracefully unfolding their delicate and beautifully arranged fronds.

The varied size and habits of growth of the different genera and species afford plants suitable for almost any place which one may desire to beautify about the house. The Arborescent forms such as *Dicksonia Antarctica*, and others, furnishing trees; the *Lygodiums* or climbing ferns furnish the vines; *Aspidiums*, *Aspleniums*, *Pteris* and other genera furnish the low-growing feathery masses which so effectually fill in the background and corners of the outdoor fernery;

while the low-growing species of *Adiantum*, other genera, with a carpeting of *Lycopodium* and *Selaginellas*, finish up the foreground. There are also minute species which only require a nut-shell, a knot-hole or a depression in a rock wherein to exhibit their miniature beauty.

The genera and species of intermediate requirements and utility are very numerous and widely disseminated, and owing to the increasing interest taken in their cultivation, the native plants of widely separated countries are being rapidly brought within the reach of the amateur fern-grower.

Dry sandy soil, rich loam, muck, peat, dead wood, living trees, water, barren rocky soil, and even bare rocks may all be accommodated with species of ferns suitable for growth in or upon them.

A great many species of ferns will thrive in a lath house if protected from the winds, and many who cannot conveniently have a conservatory may derive a great deal of pleasure from the cultivation of the hardier species. Plant the ferns in stout boxes, old buckets, etc., with suitable soil and good drainage. These may be placed on the ground or piled up in a group to suit the requirements of the spot and the taste of the grower. Rocks should be placed so as to hide the unsightliness of the boxes, and the interstices should be filled with peat, living moss, or masses of the roots of common ferns from the woods.

During the past seven years the writer has been experimenting on various species of ferns from foreign countries, to test their adaptability for outdoor cultivation. Many of the exotics have given more satisfaction than the native species grown under the same conditions. Several of the latter die out without apparent cause when moved from their native habitat. Among the most satisfactory plants grown under varied conditions are the following:

Dicksonia Antarctica, too well known to need description.

Dicksonia Davallioides, large fronds and finely-divided pinnae.

Aspidium Falcatum, rich, dark-green leathery fronds, a native of Japan.

Onychium Japonicum, a very handsome fern, with delicate, finely-cut foliage, as fully entitled to be called lace-fern as some other species which pass under that appellation.

Hypolepis Repens, as beautiful as the *Onychium*, but of a much more robust habit when grown out of doors.

Pteris Tremula, its regular branching fronds growing from two to four feet high, and its bright-green pinnae and chestnut-brown stems giving it an unusually airy appearance.

Pteris Cretica and its variety, *Albo-lineata*, with its distinct white line running the entire length of the sterile fronds, and the fertile fronds, thrown well above the others, making it one of the most popular ferns in cultivation.

Pteris Serrulata, more easily cultivated than almost any other exotic species, adapting itself to almost any condition or manner of growth.

Asplenium Bulbiferum, another popular fern, its finely-divided fronds pendulous and covering a space of four or five feet; profliferous, the bulblets ornamenting the upper surface of the frond.

Aspidium Aculeatum, Von Angulare, the profliferous form of which makes an exceptionally beautiful plant, the young plants growing the entire length of the ripening frond, and so thickly placed as to hide the central portion of the frond by their mass of delicately tinted moss-like foliage.

Adiantum Hispidulum, resembling somewhat *Adiantum Pedatum*, but very distinct. Many others might be added to this list, but time and the length of this paper forbid.

A large number of the North American ferns will do well and prove satisfactory under cultivation. Of our California species, *Nephrodium Patens*, *Woodwardia Radicans* Var. *Americana*, the three *Adiantums*, *Pedatum*, *Emarginatum* and *Capillare-veneris*; the *Pellaea*, *Cheilanthes Californica*, or lace fern, *Cheilanthes Clevelandii*, *Notholaena Sinuata* and its varieties, *Gymnogramme Triangularis*, *Aspidium Munitum* and *Aculeatum* with their varieties, *Asplenium Felix-femina*, *Lomaria Spicant*, *Polypodium Seouleri*, *P. Californicum*, and others.

Too little attention has been given to the cultivation of the ferns of the Eastern States, many of which could doubtless be introduced here. *Nephrodium Patens* grows in Florida and Texas, and its occurrence in Santa Barbara county seems to be the result of an accidental distribution or a holding over of a species which has otherwise died out on this coast.

There are special works on ferns which give cultural directions.

A few hardy palms, a clump of feathery bamboo, a pot of the lovely ethereal *Asparagus-Nana Plumosa* or *Tenissima*, will add to the loveliness of a fernery. They are all hardy and easily procured.

The writer would be pleased to receive notes from any one who has had experience in the cultivation of native or exotic ferns out of doors.

ODDS AND ENDS OF SOAP.—Every piece that becomes too small to use, lay aside, and when a sufficient number have accumulated, boil them in a little hot water till all are melted, then pour into a mold, and when cold you will have a nice cake of soap. You can use a glass dish for a mold by heating it thoroughly before pouring the melted soap into it.

Interstate Commerce Amendments.

The Interstate Commerce Commission has issued a lengthy circular calling the attention of common carriers to the provisions of the recent amendments to the Interstate Commerce Act, and urging that especial care be taken to avoid violations thereof.

Among the declarations of the amended portions is one to the effect that no advance shall be made in joint rates, fares or charges, except after ten days' notice to the commission, and no reduction shall be made except after three days' notice. Time in each case is to be computed from the day when the notice of change reaches the office of the commission in Washington.

Transportation of passengers or freight over continuous lines or routes operated by more than one carrier upon through tickets or through billing necessarily implies the existence of joint tariffs. In future all advances or reductions in joint tariffs will be given the same publicity as required in the case of individual carriers.

Another amendment makes it now an indictable offense for any carrier to participate in the reception of compensation either above or below the established rates for the transportation of any joint traffic whatsoever. The commission is required to execute and enforce the provisions of the Act, and it is made the duty of any District Attorney of the United States, upon the request of the Commission, to institute and prosecute all necessary proceedings for that purpose.

These rules apply equally to joint and individual tariffs.

Regarding export traffic, the commission understands that the through rate is determined by the addition of the ocean rate prevailing from the point of export. Therefore the inland rate to such point of export is subject to the foregoing regulations.

Growing Crops Exempted.

Assemblyman Howe's bill, No. 549, has passed both the Assembly and Senate and is in the Governor's hands. He claims it will exempt growing crops from taxation. The bill is entitled "An Act to amend Chapter II of Title IX, Section 3617 of the Political Code of the State of California, Relating to the Definition of Terms." The seventh of the series of amendments reads as follows: "The term 'growing crops' includes: All growing crops, cereals, vines, nut-bearing, fruit and ornamental trees." No farmer will ever object to the lessening of his taxes. He pays the greater part and receives the least direct benefit of any class of men.

San Lucas Prospering.

San Lucas Grange is determined to get there if she be but an infant in years. S. Sherwood, the Secretary, writes Secretary Dewey to hurry up and forward them sashes and pouches for three candidates to whom they expect to give the first and second degrees Saturday. He adds the cheering intelligence that two men and three women sent in applications for membership at the last meeting.

Indorsed by Santa Cruz.

MESSRS. EDITORS:—I am instructed by Santa Cruz Grange, No. 68, to say that the resolutions passed by San Jose Grange Feb. 16 were fully indorsed by Santa Cruz Grange at a called meeting held to discuss said resolutions March 6, 1889.

B. PILKINGTON, Secretary.

Santa Cruz, March 7, 1889.

WE hope to announce next week that Past Master Coulter will address San Jose Grange on the occasion of conferring the third and fourth degrees on a prize class of a dozen more men and women with the new combined ritual, on the 23d inst.

Bro. Carr's Address at Stockton.

At the reception at Stockton on the 6th ult., Worthy Master Carr spoke at length, and was listened to by a large gathering of Patrons and farmers generally. The Stockton Mail gives the following synopsis of Bro. Carr's remarks:

In his address before Stockton Grange, Worthy Master Carr of Wisconsin dwelt particularly upon co-operation and the benefits arising from a union such as that formed throughout the land by the Grangers. He urged all who were eligible to join it. It was not the hard work to be an active member of a Grange, he said, that it was a few years ago. The institution was sailing along finely now. At first there were few of the Grangers who were accustomed to presiding over deliberative bodies; but they were not so green now. There were numbers of farmers who could not only preside, but could make able addresses. There were plenty in every subordinate Grange who would make good representatives. They could be picked out by the dozen in such subordinate Granges as that in Stockton. They had become educated faster and better than they knew. "Think," said he, "of things as they were when you organized and see if you have not gone a long ways ahead of where you were then."

The Strength of Union.

During the struggle for the passage of the oleomargarine law the power of the Grangers as an organization was manifested. The speaker did not know how it was in California, but in Wisconsin every Grange passed resolutions; and if any one had looked into his office at 11 or 12 or 1 o'clock at night they would have found him busy penning letters not only to the members of Congress who went from Wisconsin but to the entire 401 of that body. All the Granges worked for it and it was enacted.

What the Grangers especially needed was more representatives in Congress. He was proud, he said, of those they had there. There was Senator Spooner who used to brag that he could twist a band about a sheaf of wheat as quick as any man alive; he had got so that he could twist an argument with the very best of them. Spooner said in an address that the Grange was the best institution to which the farmer could belong. He was saying nothing against other organizations, but the one for the farmer to join, both to build up himself and his interests, was the Grange. It was purely a farmers' organization.

The Farmers' Congress.

"There is," said he, "the Farmers' Congress of America. It may be and doubtless is a very good organization, but how is it made up? The Governor of each State appoints a member for each Congressional district of the State. That is all very well, although it has a little coloring of politics to it. But how does the Governor know whom to appoint? There is a Vice-President chosen for each State, and he sends in to the Governor the names of those he wants appointed to the Congress, and the Governor appoints them. I got an appointment once myself; but do you suppose that if I had anything to do with the Farmers' Congress of Wisconsin that I'd leave my Grange—that I'd strip off this badge that I wear? No; and if I can't accomplish anything in the Grange, I certainly cannot in the Congress, for there I should lack the immediate backing and encouragement and enthusiasm which comes from a popular connection and a popular backing. The members of the Congress can but at best follow the Patrons of Husbandry; but if they will not work with us, let them work as they are, but the strength ought not to be divided."

The Alliance and Congress.

The Southern Alliance, the speaker said, was preparing to merge itself into the Grange movement. They were satisfied that it was the best thing they could do. Their objects were the same and they had done nobly in assisting to pass some needed laws. At the last session they joined with the National Grange in the endeavor to get the postage reduced on packages of seeds and bulbs. The movement started in the Grange, and it went before the House and through the Senate, and became a law which benefited everybody except the great corporations.

But the great need of all agricultural organizations was to change the political complexion of Congress. "Why," said he, "they have given away 400,000,000 acres of land which should have been kept for your children and for mine, and the people have sat idly by and allowed them to do it. These great possessions have gone to the rich and mighty corporations."

Land Steals.

"There's the Northern Pacific—and I came over their road—got 47,000,000 acres—every other section for 40 miles on each

side of their road. It is an outrage. There are in our land 20,000,000 acres owned entirely by foreigners who care nothing for our Government and nothing for us but to make money out of us. One man owns 75,000 acres, of which 40,000 are in Illinois; and his tenants there were equally as degraded as those of Ireland. What was the result? The Granges of that State started and took hold of the movement to put a stop to such things there, and they put it through the Legislature, and now those lands are for sale. They are all in the market; and so they should be all over the land. If I had lungs like the ocean and a constitution like that of the United States [applause] and Gabriel's trumpet and was on a pedestal 14,444 feet high, I would shout to the country and tell them the condition of agriculture all over the land and do some good; but we must change the complexion of Congress.

Granger Law-Makers.

"I do not know but you may have a farmer as a representative of this State in Congress—I hear you have. Is it true?"

Worthy Master Overhiser answered that it was.

"Well," continued the speaker, "we have none from Wisconsin. Now, when Mr. Carlisle wants to make up his Committee on Agriculture he has to make it of just such timber as the people give him. Of the 15 composing the Committee on Agriculture, five are lawyers, four are merchants, two are bankers, three are said to be farmers, but I have my doubts about it, although one is a planter, and one has no occupation. I say that I have my doubts about those being farmers who are said to be farmers, because I knew a lawyer who was put down as 'the farmer from Walworth,' and he wore that name all through the legislative session. But there are five lawyers on the Agricultural Committee, and what do you suppose we want of lawyers on an Agricultural Committee? We have no use for them. We want men who know a beet from a cabbage, and we told Speaker Carlisle so. That was because they had one on the committee—a New York fellow—who didn't know a beet from a cabbage."

Settling Difficulties.

"We have no use for lawyers, anyway. There may be half a dozen here in this room. If so, I wish them well; but if there are any Grangers' sons present who contemplate being lawyers, I'd say to such: 'Think well before you do it.' Grangers have no use for lawyers if they live up to their ritual. If they find matters of difference they can select their friends—one each, and they the third one, and they go before the Grange and settle matters. It then goes about as it does in Denmark before the Elect Court of Consultation, where four-fifths of the cases are settled, although they have the right, if they choose, of going before the court afterward. But they have no lawyers there."

The Strength of the Grangers.

"Now, the lawyers are multiplying very rapidly, but not as fast as the Grangers. Wisconsin University turned out 71 lawyers last year and let them loose on an unprotected people."

The speaker then told some of the inside workings of the University at Madison, and how the farmers dug and sweat and got so tired that they couldn't read, and made no movement, but let 240,000 acres of land donated by the Government become tacked on to the State University, the representatives of which selected the lands and sold them at \$4 25 an acre and put the money into bonds so that they could spend the \$18,000 a year interest to educate lawyers.

"I don't know how it is here," continued he, "but the farmers of Wisconsin pay 70 per cent of the taxes of the State, and I presume you pay over half in this State. See to it that you get an agricultural college. You are strong enough to do it, but for God's sake and your own sake don't get one that will turn out over one-half of its graduates as lawyers. Farmers are apt to send their brightest children to those universities that educate the head and not the hand, while they keep the lunkheads at home to learn farming. The Grangers are strong enough, I repeat, to provide agricultural schools for their brightest boys, and, if you haven't got such a school, don't let the present session of the Legislature pass till you get a bill through providing for one where head and hand shall be educated together. But divorce it from the classics. The two will no more mix than will oil and water."

Agricultural Schools.

The speaker then enumerated some of the schools which were purely agricultural, and cited commendably those in Michigan, Massachusetts, Iowa, Kansas, Mississippi, and others he had visited. These were doing a great amount of good. They were lifting agriculture from a despised occupation

to a science, for the most successful farmer must be a scientific man. If children were sent to the other schools they were very apt to come out, not as they went in, robust and strong, but broken in health and good for nothing, many of them forever after.

"Make farming honorable," said he. "Make it honorable? It is so already—nothing more so. To follow it is to keep the hand and head both steady and true. Why, the Emperor of China once a year goes out into the field and turns a furrow to show that he considers agriculture the foundation of his country's prosperity and to make it honorable. It is truly so in all nations, and it goes back into the dim days of antiquity for its origin. But to get the best results for ourselves we must get together, we must work together, and we must vote together."

Farmers Fighting a Combine.

The following extracts show that different States are preparing for the fray:

If farmers are really in earnest in their efforts to fight trusts, there is one way in which they can show it; that is by refusing to buy twine this year to bind wheat and other grain on their harvesters. Every man who has a self-binder and grain to harvest can now show whether he really means business. Of course it will be a little inconvenient to cut grain without binding it, but is not the object to be attained worth the sacrifice? If it is not, then it is not worth the trouble and expense to fight any trust. The issue is fairly and squarely before the people. The twine men have formed a syndicate and propose to put the price of twine at any figure they choose. No one uses this twine but farmers. If they refuse to buy, the trust will be smashed. Will they have the nerve to refuse?—*St. Louis Journal of Agriculture.*

I have been waiting for some one who can wield a more trenchant pen than I can to speak out in condemnation of the Binder-Twine Trust, but as no one does, I will try my hand in hope of awaking the people to what I think a great danger. This trust is surely one of the greatest steals that has come to light in this age of trusts. A few men (so the manufacturers say to shield themselves from their share of the steal) have bought all the raw material in sight and forced the price up from six to ten cents per pound.

Now what do you say, Mr. Editor and brother farmers? Shall we submit, or shall we do as any other trade or occupation would do, rebel, for if we submit now to 20 or 25 cents per ball, will we not next year submit to another steal of five or ten cents per pound?

Had we not better refuse to buy a ball of their twine? We can cut our grain with our binders, and bind it by hand as we did before the time of binders. The binder will put the grain off in as good shape for binding as the self-rake did, and I well remember when we thought that a perfect machine.

Of course it will cost us a little more this season to bind by hand, but if we submit to the rapacity of these robbers they will not stop until they put this twine up till it would be barely below the cost of hand binding.

If we simply say to them, "keep your twine; we can and will do without it if you persist in your extortion," one year will be sufficient for them, and they will not try it again if they find we are in earnest.

I, for one, will pay extra price for hands to bind my grain before I will allow myself to be robbed in this manner. I would like to hear from some of your readers who are better posted than I am on this matter, and also from you. Can nothing be done to stop this wholesale robbery of an already overburdened farming community?—*R. A. L., Octagon, Ind., in Indiana Farmer.*

We are glad our correspondent has called attention to this matter. It had been mentioned to us by another reader, but for the time was forgotten. If any considerable number of farmers can be induced to join you in your determination, it would help to break down the trust. Your plan is the only practical one that we can think of under our present laws. We see it stated that the farmers of Iowa are organizing to resist the demands of the Binding-Twine Trust.—*Eds. Indiana Farmer.*

Grange Election.

POINT OF TIMBER.—F. J. Qualt, M.; J. E. W. Carey, O.; L. J. Willis, L.; M. T. Ivory, S.; A. Plumley, A S.; S. J. Ivory, C.; Geo. Caple, T.; S. M. Wells, Sec.; —, G. K.; Maggie Caple, Corrs; Minnie J. Carey, P.; Sarah McCall, F.; Dora Lemoine, L. A. S.

VALLEY GRANGE of Pacheco will give a social dance on the 26th inst. in that town.

The Grange and Fruit.

[Remarks of JAMES BOYD of Riverside at an open meeting of Tulare Grange on the occasion of a Harvest Feast March 2d.]

Worthy Master and Members of Tulare Grange:—I feel rather embarrassed by reason of not being accustomed to public speaking, by being called on to address such a goodly company of toilers and producers. Being, however, an ex-Granger myself and a life-long toiler and producer gives me the greater feeling of confidence and makes me more at home, and so I will not take up your time or weary you by profuse apologies, but will rather go ahead and try to show you what we have done in Riverside, believing that will interest you more than any personal remarks I might make.

Claiming to know somewhat of Grange principles, I believe that co-operation is one of the fundamental principles of the Patrons of Husbandry. It will not therefore surprise you to hear that what has been done in Riverside has been done mainly by the co-operative efforts of the citizens themselves.

It is rather surprising to me to find that here in Tulare the water question is in an unsettled condition, and that it is in the power of one or two men to defeat what would seem to be the will of a whole community. In Riverside we settled the water question years ago in an effectual manner, and to day in Riverside wherever a man owns or claims land he has water and uses that water on his land. It might be in our favor somewhat that in our irrigation customs we had mainly followed the old Mexican and Spanish laws and customs on that subject, and that our courts in Southern California had always recognized such laws and customs in their decisions, and it makes me almost wonder, when I find that other laws and customs are apparently followed in Tulare, whether I am really in California.

It may rather surprise you, with your comparatively large land-holdings, to hear what we are doing in Riverside, and as a matter of the general good I believe that the sooner you get rid of a portion of your surplus lands and put them into the hands of intelligent fruit raisers the sooner your county will go on to greater prosperity. In view of the fact that some uneasiness is felt for fear that you may have a dry season that will partially at least curtail your crops, when I look at your fertile soil and your snow-crowned Sierras I have no hesitancy in saying that you need never suffer for lack of moisture in your soil, if you will only go on and use the water with which by nature you are abundantly supplied. But in order to do this to the best advantage, land must be held in small subdivisions.

In Riverside the man who owns ten acres of improved land is thought to be well off, and I see no reason why you cannot raise grapes and deciduous fruits to perfection with winter irrigation and thorough cultivation. You may not be able to raise oranges successfully right round here, but you can raise apricots, and the remark was made to me by a Riverside man on the train on my way up here, that if he could raise a crop of apricots every year in Riverside it would pay him as well as his orange grove.

Now in Riverside we expect to sell \$1,000,000 worth of fruit this year, and this is grown on 6000 acres not yet in full bearing, and this gives a living to a population of 6000, or one person to every acre of land under cultivation. But our water system has cost us all told \$1,000,000, and now we have the best water system in California. In addition to our irrigating ditches, we have 300 inches of artesian water piped through the whole settlement under a pressure of 200 or 300 feet, and every family in the settlement has the privilege of using that water, and a voice in its management. By our system of co-operation, we have spent over \$60,000 on a new high-school building, and when the needs of our rapidly growing population demand it, provision is made for an expenditure of \$15,000 or \$20,000 more on it. And what we have done has been done without any such organization as you have, simply by the systematic efforts of the people themselves. This requires education, energy and enterprise directed in an intelligent way, and we old settlers of Riverside have had to pay for our education in such a way as you need never have to, as when we started in Riverside comparatively nothing was known of orange-growing or raisin-culture, and every man picked and packed his fruit for market in the way it seemed best to himself, until now, as a result of our efforts, we have six large packing-houses, and you can if you wish sell your fruit on the tree or vine and get your cash for it without any further trouble.

As an instance of the costly experiences we have had in Riverside I would say that I am now digging up and burning lemon

trees, which wood must have cost me \$100 per cord, and as a result of our mistakes the man who buys unimproved land in Riverside to-day is likely to make more money on his investment than we who got ours at a cheap rate. It was perhaps fortunate for us in one sense that we in Riverside could not raise anything successfully except fruit, as it compelled small holdings and kept out an undesirable class of settlers. As a further argument in favor of small holdings of land I would say that we have railways, motor roads and street railways all through our settlement in such a way that half a mile or less will in most cases bring any of our citizens in reach of some one of these modes of intercommunication, and by this method we can enjoy the country in the city and the city in the country as may be desirable.

Fruit-raising demands intelligent efforts, and this is all in harmony with the aims and objects of the Grange; and when I heard a brother make a remark about legislative action on the saloon question it made me feel like telling you that when we wanted to get rid of the saloon in Riverside we declared it a nuisance and got rid of it, and though I do not go as far as some prohibitionists, believing that the most effectual way of closing the saloon is to stay outside of it, I still recognize the fact that there are some who cannot resist the temptation, and it is our duty to remove that temptation in the best way in our power.

The logical outcome of my desultory remarks is that what has been done in Riverside can be done in Tulare county, and that would imply that wherever you carry on fruit-growing on a rational basis, every 6000 acres treated in that way ought to produce \$1,000,000 and support one person to every acre.

Ready and Desirous.

The following letter received at this office shows that our Southern California brethren have an opportunity to get into line again if they will only embrace it:

Am glad to hear so much good Grange news about the Grange at Chino, San Bernardino county. I am willing and ready to do all the work required, provided it can be done by or before the 12th of this month and provided you will furnish me with the necessary rituals and other outfits. These you can forward to my address at Chino, Cal., care of B. V. Moffitt, provided they need to be sent.

My intention is to leave Yuma about the 8th of March, and I shall stop over at Colton, Riverside and San Bernardino for a couple or three days. Will stop there longer if the people want a Grange. Notify me by telegram here up to the 8th instant if the Chino people want to organize. If there be any chance to reorganize Los Angeles Grange, I will agree to remain there to do the work, provided it can be done by the 20th of March. Please advise the proper parties at Los Angeles of my desire to help them, and tell them to address me by letter any time up to the 14th of March at Pasadena, Los Angeles county, care of Prof. E. S. Carr. I am going to visit with Bro. and Sister Carr for a few days. You can also reach me at their place up to the 14th instant. My intention is to stop at Tulare and other Granges on my return trip, whenever I can catch their regular meetings by two or three days' stop-over. I expect to be in San Francisco about the first of April, and shall call to see you.

I hope we can get the Grange plant in Southern California to growing again. This is a fertile section of California, and the Grange ought to be so planted and nourished that the harvest would be large from the land of the orange. My program is elastic, and I will accommodate all if possible. E. W. DAVIS.

Yuma, A. T., March 4, 1889.

[All will be glad to read such a letter from our Worthy Overseer and, while noticing the evidences of returning strength, breathe a word of caution for him to "step with care" as to assuming anew too many labors of his office.—EDS.]

BRO. D. FIELD, a Patron from Maine, is a hale-looking man for one over whom three-quarters of a century have rolled. He has served in the Legislature of his native State, and thinks it a grand thing that he can cross the country and find himself welcomed by the Grange, an inmate of the same home. He has not settled definitely where he will live in our State, but expects to locate in Oakland and join Temescal Grange. We enjoyed the good brother's conversation. The Grange is strong in Maine. Turner Grange, he said, met early in the morning and stayed all day. That is the kind of meeting to hold. No wonder such Granges are strong.

More Ready for Reorganization.

Bro. Logan sends us the following cheering letter from San Luis Obispo:

Have just returned from Arroyo Grande, where I secured over 40 signatures for the re-establishment of a Grange. I made no appointment for the meeting, not knowing when I could secure the services of a deputy to organize it. Perhaps Bro. Webster can go down after our meeting at Cambria. I will go up to Creston to-morrow and try to get a Grange at Starkey, and perhaps at Parkfield, as he (Mr. Webster) is desirous of having the people organize in those neighborhoods. He thinks that with five or six Granges in the county a Pomona Grange may be organized eventually.

Approves of the Idea.

Bro. A. P. Roache writes us from Watsonville as follows:

I should have answered your letter ere this, but actually have not had time till now. Your idea of awakening interest in the Grange by calling closed meetings in the morning and open ones in the afternoons I think an excellent one, and I believe it would result in great good. If two or three interested Patrons would go at it in earnest, much could be accomplished. The main difficulty would be in getting anything like an attendance; but that also could be overcome. I feel that something must be done to induce newly organized Granges to persevere, and our intercourse with them should be such as to make them feel that they really belong to a great fraternal family, and that the interest of the parent Grange in them does not cease after they have received the obligation and the State Grange and Deputy their fees.

Your plan seems to offer a practical solution of the problem. I would respectfully suggest also that it would be in order for a number or perhaps for all the Granges of standing to recognize and welcome all new Granges to the great circle of brotherhood in some appropriate way and make them feel that we have a real, tangible interest in their welfare and life.

I visited Gilroy Grange, all but one member being present, and gave them a thorough drill. Told them all I knew and a great deal more. They are anxious to have their charter returned or renewed, as was also Hollister.

Hope to do some solid work this year. We feel much encouraged over the improvement in our Grange. I shall have to apply to the State Grange for a new housekeeper, as my wife has become a regular scout in Grange work and has secured three or four new applications, the first in four years. We hope to report some progress right along.

Bro. Roache will please excuse the liberty taken with his personal letter. To the Grange at large we would say: Weigh our vigilant Steward's advice well, and show through correspondence that you have a welcome for the new Granges. Offer its members an exchange of ideas through the Press or by letter and encourage them by bracing up anew to the work in your own Grange and thus give them a good example.

Want the New Rituals.

BRO. A. Kingery, the Secretary of the newly reorganized Paso Robles Grange, has forwarded Bro. Dewey an order for the new combined rituals so that they may lose no time in initiating the two sexes at their next meeting, March 16th. They expect to induct a large number into the mysteries of Ceres, Flora and Pomona.

Woodbridge Grange.

MESSRS. EDITORS:—At the regular meeting of Woodbridge Grange, No. 84, P. of H., held March 5, 1889, the First and Second Degrees were conferred on a class of eight, three sisters and five brothers.

By motion, it was decided to confer the Third and Fourth Degrees at the next regular meeting, March 19, 1889, and to have a Harvest Feast, to which the officers of the State Grange and all Patrons in good standing are invited. Yours fraternally,

ROBT. G. WILLIAMS, Secretary.
Woodbridge, March 7.

BRO. MCCONNELL of Elk Grove Grange, a member of the Executive Committee, visited our sanctum this week. He was here to attend the meeting of the Grangers' Bank Directors.

A Feast Approaching.

BRO. O. F. Alley writes from San Jose, under date of March 11th, inviting Bros. J. T. Cobb, Secretary Michigan State Grange, and David Woodman of Michigan to visit their Grange at the conferring of the third and fourth degrees, and extending a similar invitation to Bro. Dewey. As Bro. Woodman does not expect to be able to attend, Bro. S. T. Coulter has been requested to be present. They will not have the Harvest Feast this week "because we did not initiate but six last Saturday, owing to various reasons. Two thought the meeting was in the afternoon, another had an appointment with a dentist, and why the other three did not put in an appearance I have not learned. So we hope to get the remaining six in next Saturday, and then on the following Saturday we will confer the Third and Fourth Degrees and have our Harvest Feast, to which you [Bro. Dewey] are bidden, also Bros. Woodman and Cobb."

Fortunate Farmers.

According to a special in Saturday morning's papers from Marysville, quite a stir has been created there by the receipt of the news that the United States Government has taken action to stop hydraulic mining on the creeks in Shasta county discharging into the upper Sacramento river. It is learned that a complaint was recently filed in the United States Circuit Court and that Judge Sawyer granted injunctions, which have just been served. Ex-Judge A. L. Rhodes of San Francisco is said to be retained by the Government for the express purpose of prosecuting debris cases affecting navigable waters. It appears that hydraulic mining has been going on in Shasta county on a large scale, and considerable damage has been done. The action of the Federal Government in this matter is hailed with delight in Marysville, and is held to show that the Government authorities will henceforth relieve the agricultural interests of the need of carrying on any more debris suits.

Points for New Granges.

A Patron from Santa Rosa writes Bro. Dewey as follows:

Our Grange is in a flourishing condition. We have a class of 12 on the way and in hopes to soon have more. Bro. S. C. Carr of Wisconsin took us by surprise, coming in upon us while the Pomona Grange was in session. He took his seat by the side of his brother, whom he had not seen for 35 years. He rose to his feet and introduced himself. You can imagine the picnic we had then during the day. He addressed the Grange, and we were sorry it was not an open meeting so the farming community could have heard him; but they have heard of him since through the Rural Press. It has waked up our Grange, and they are still hard at work getting new members. There are four Granges in the county and there are several places where there should be one, viz.: Petaluma, Sonoma, Glen Ellen, Forestville, Healdsburg, Geyserville and Cloverdale.

Reports Progress.

MESSRS. EDITORS:—We are pleased to report to the readers of your valuable papers the progress of the Plumas Grange in Plumas county. It was organized in 1874, and has a membership of 40 good, substantial working members. The financial standing is good, with money on hand and money at interest, and with the hand of charity ever open and giving aid to all the needy and suffering. On the 16th inst. they had a public installation of officers, followed by a sumptuous feast and a grand good time. O. McElroy of Rocky Point was installed as Master, the right man in the right place.

MRS. E. J. STEPHENS.

Sierraville, March 6.

Had a Good Time.

Saturday was a field day for Tulare Grange, it being the occasion of an official visit from State Secretary A. T. Dewey and State Lecturer D. Flint. After the secret session at the hall, the Patrons formed in line and marched to the Cosmopolitan hotel, where a banquet had been prepared. Not having been present at the banquet, your correspondent cannot give a very extended account of what took place there, but understands that a royal good time was had.—Tulare County Times.

BRO. WIGHTMAN, Worthy Treasurer of Sebastopol Grange, visited us Monday. He says they are holding their own with about 60 members.

"The Land of By-and-By."

The valleys stretched before me in that visioned land of light;
They were green with gleam of meadow, and with orchards they were bright;
On terraced hills the vineyards stood in seemly row on row,
And the grapes' full clusters purpled in the noon-tide's ruddy glow.

In the pastures, herds were feeding; in the harvest fields, the corn
Heaped the wains as 't were the largess from old Plenty's fabled horn.
Back and forth on traveled highway sped the traffic of the day,
And the train's shrill whistle sounded like a challenge to delay.

Round the pleasant dwellings, roses shed their sweetness on the air,
And the children's happy voices sounded blithely everywhere;
And the fair-faced gentle mother, on her errands to and fro,
Felt the joy and peace of loving from her glad heart overflow.

Want's grim specter lurked no longer at the household's festal board;
Gone was hunger, gone was malice, and the many-millioned hoard,
Men with men as brothers meeting, now no longer rivals stood;
Heirs of nature's common bounty, children of one Fatherhood.

In that visioned land of beauty, rose the city's pillared domes;
Street on street of stately warehouse—square on square of spacious homes.
But no alleys, foul and narrow, and no tenements were there—
Shutting out God's air and sunlight, shutting in the heart's despair.

In and out the crescent harbor, ships were passing on their way,
Freighted with the wealth of Europe, with the treasures of Cathay;
On the crowded wharves were mingled all the Indies' fragrant store,
With the hardy skippers' cargo from the coasts of Labrador.

Man no more in impious striving thwarted Heaven's eternal law;
Broad and fair as earth's dominion, now his heritage he saw.
Labor's giant forces never Greed's strong hand might fetter more;
And the throbbing pulse of commerce now was felt from shore to shore.

The starry banner floated—a welcome to the world;
But above its silken streaming was a fairer flag unfurled;
Upon its virgin whiteness no nation's name had place;
LOVE was the golden ensign that shone for ALL THE RACE.

In fancy oft I linger in that visioned land of light,
And see the happy people, with their faces calm and bright;
They mind me of "the shining ones" of whom the Pilgrim told;
And I think the Land of Baulah is this which I behold.

—Frances M. Milne, in *Weekly Star*.

Raining Rocks.

Meteoric Stones and Rural Philosophy.

EDITORS PRESS:—Probably the year was A. D. 1858—or along there somewhere—when I took a ride with a high-toned peddler of dry goods and notions in the counties of Muskingum and Guernsey of the State of Ohio. The season was summer, or at least the weather was warm. This peripatetic merchant was a man prone to display, and his wagon was an artistic evolution of the wainwright's mysteries; the run gears were delicate and beautiful to look upon, yet strong and tough as the celebrated white-oak, ash and hickory woods of that country could warrant; the bed, or box, was constructed with a system of shelving inclosed in a painted shell of clear poplar lumber, highly polished, and in shape like an oblong square, one-roomed house, one story high, with a roof on it pitching gently right and left, from side to side; and all the woodwork of this wagon was painted a bright red, except the delicate blue penciling on the wood of the wheels and the bright glossy black on the ironwork. Above this wagon-box at the front was a black leather top, like a buggy-top, covering the seat. The outside of this painted shell could be let down at each side and at the tail, resting upon suspender chains from the frame of the shelving, and when let down, either one or all three of these parts could be used as counters on which to display, and from which to sell, goods, wares or merchandise. In front of this mercantile vehicle trotted or pranced four jet black horses.

[NOTE.—This description of an ancient ped-

dling-wagon is for posterity; to show to the later-born and unborn readers of the RURAL PRESS (and may they be thousands upon thousands, Selah.) that their ancestors, "away back in the States," were no slouches in the peddling line when the grizzly bear on the California State shield was only a cub.]

Well, as I was about to say, I was journeying with the peddler, riding on the comfortable seat of the wagon aforesaid, and heading for the town of Cambridge, when, suddenly and without warning, a missile (afterward found to be a black stone about an inch and a half irregularly square) struck the highly polished roof of the wagon-box behind us. "Whoa!" exclaimed the merchant, as he stopped his team with an instantaneous twist of the reins around the brake-lever, and off he went down under the wagon, where he employed himself for a moment in crawling under the forward axle-tree, so as to unhook the traces of the wheel horses. I, of course, without exactly knowing why, had promptly followed the merchant, and as we both sat, sort of flat, down underneath the wagon, I asked: "What's the matter? What's up?"

"Nothing up," says he, "but something down. I can stand most any kind of a shower; but when it rains rocks, I want to get on the underside of something hard."

There was a kind of whizzing roar in the air when the thing struck the wagon roof, and also a wide scattered plumping, or, maybe, it was a pattering, all about; but the phenomenon only lasted about half a minute of time.

Hearing no more disturbance in the air, we crawled out and up, after re-hooking on the wheel horses, and went on our way, in no wise, so far as we could see, damaged other than a shattered hole in the roof of the wagon-box—a hole which looked to have been shot there by a large ball from a small cannon or a big shotgun. I asked the merchant why not stop and examine into the matter; but he said he wanted to get out of a place where it rained rocks, and he drove right along until we came to the small settlement where he expected to remain over night and "trade with the natives." Upon examination he found the little black rock where it had fallen into a pile of woolen comforters—a kind of knit neck wearing goods—and although the black stone was, at the finding of it, cool enough, it was evident that it was warm, if not hot, when it lodged there; for it had roasted the woolens right next to its surface as if they had been scorched by a sad-iron, a little too hot for family use.

That evening at the little cross-roads village the merchant had quite an audience to listen to his story, examine the black stone, and buy small articles of various merchandise. And at night, after supper, in the public room of the half-tavern half-farmhouse, we had an immense conversation on the subject of meteors, falling stars, shooting stars, etc., and one elderly person related the story of the shower of falling stars—in 1833 I think he said it took place.

[NOTE.—"The posterity of the constitution"—by which I mean my young fellow-citizens—do not know, perhaps, much about that shower of stars. Some day in the RURAL I will tell them all about it—if I am spared—for I was there and saw it.]

Well, we had a very interesting time at that half-tavern that night. I have never heard so much variety of strictly original scientific astronomical opinion in all my life. They were nearly all willing to believe our story about the shower of stones, because most of them had heard the roaring noise at the time we spoke of. They were old-fashioned Western farmers and laborers, none of whom had what they called "book larnin'," and nearly all of them said they had "heered that nize," and one of them "sort o' thort he seed sumfin most like to er fi spec' atween him an' the sun, but wa'n't shore what it could be tell he heered about this yer rock a-hittin' the peddlin' wagon."

But as to where that stone could come from, that was the "main pint afore that ordience." Several of the cereal Solons thought "hit must er come from the moon." But "wher wer the moon at that time er day?" To which last question the merchant—the traveling merchant—ventured to remark that it didn't matter where the moon might happen to be that day, at that hour, because if that stone came out of the moon and the moon being millions of miles distant from the earth, then that stone must have started on its journey several years ago. To this last statement the crowd responded: "Gosh!"

And then we all retired for the night.

Next morning, after a little more trading in dry goods, we strung out the black horses and wended, and, along toward evening, we arrived at the town of Cambridge, and there our story of the falling stones dwindled into smallness, because they had there a black stone of over sixty pounds in weight which had fallen hot, down from the upper air, about the hour that we dodged from the shower of stones.

This meteoric stone—the sixty-pounder—was exhibited for some time as a curiosity, and finally found permanent lodgment in some scientific museum—the name of which museum I could remember years ago, but not now.

The moral of this sketch is that when rocks are raining it is no cowardice to seek shelter.

J. W. GALLY.

Watsonville, Cal., January, 1889.

GENIAL CUSTOMER (in cheap restaurant)—Is the mut'on broth good to-day?

High-toned Waiter—Don't know, sah. I don't eat heah, sah.

Our Back Yard.

[Written for the Rural Press by MAUDE S. PEASLEE.]

We were new-comers to California, and the New Year found us settled in a little home on the outskirts of a busy mining town of the Sierras.

The house stood in a lot of four acres which was entirely uncultivated. The fence needed repairing and Donald saw there would be much work to be done on the place in the spring.

"In the spring!" exclaimed a neighbor. "Why, man, you ought to begin work at once."

I looked doubtfully out at the feathery flakes of snow that looked seasonable and homelike to me, so recently from New England.

The wiser neighbor assured us it wouldn't amount to anything, and that indeed any young trees we meant to set out ought to be in the ground even then.

The snow melted before night, and the next day was exceptionally fine; so I resolved to explore the yard while the men worked.

In the lower end of the lot the ground descended abruptly to a small creek skirting two sides of the yard. It had its rise in a spring that bubbled out from one of a pile of large rocks. There were a number of wild and woody looking shrubs near the running water, and as I had been eagerly studying up on the California flora, I easily classified them.

The manzanita with its dark-red scaly bark, its thick, leathery leaves, and its delicate pink, wax-like buds almost in bloom, was the most prominent. I found the blossoms too sticky to handle, but already giving forth a faint fragrance.

The pea-flowered cercis or Judas tree had not yet put forth its red buds, which legend tells us were white till the arch traitor hanged himself on one of the blossoming trees, whereat it blushed for shame. It was so old a friend that I knew it at once.

A chaparral bush in the next yard peeped through at me, and one branch had saucily extended even into my own territory; so I claimed it for one of my own.

Following the creek back to the spring, I found, to my great delight, many tiny green ferns uncaring their feathery fronds under the coaxing rays of the warm sun. Later in the season I scoured and planted some maiden-hair fern in my little rockery. It is not very common in this part of the Sierras.

I found a wild grapevine among the branches of some willows and locusts that fringed the upper edge of the creek. Already it made the trees beautiful with its graceful sprays and clinging tendrils.

I saw some azaleas near the house and sympathized with the love of the beautiful in the one who preferred them to a decorative shrub of any other kind more often cultivated.

The light upturning of the sod which was the only plowing they gave the ground that year was very favorable to my wildflowers and shrubs. The winter crept on; an occasional rain of perhaps several days, alternating with days of glorious sunshine, drew the flowers from their quiet sleep.

After each storm I searched eagerly for new beauties. My Judas tree was in full bloom in March, and in the sheltered nooks among the rocks I found my first delphinium, somewhat resembling our Eastern larkspur save in its brilliant crimson hue. Creeping on the ground were tangled masses of delicate mimulus, hardly at all musky in its faint fragrance.

The fritillarias came a little later, and by the last of March the buttercups blossomed in cymes as high as my waist. Every day now I found new species. A few plants of the oxalis or pink-and-yellow wood sorrel were scattered through the yard, while the Hossakias grew in great profusion. They were almost equal to the cultivated sweet pea in fragrance and appearance, though daintier and more fern-like. I had both the pinkish-purple and the white dodecatheon, and soon came the violets—purple, white and the large golden ones, with purplish-brown markings.

I found the white violets outside our lot and transplanted a little bed of them. In this way I contemplate adding to my treasures, and have marked the locality of two or three fine specimens of ceanothus and fremontii. The yerba santa I can get at any time, and a friend has promised me a madrono tree. I have heard of a specimen of aristolochia, and know where I can get a good clematis.

It took me some time to find these, but I will have them all for my own before another summer comes. I have been called cranky and chimerical when I have expressed a fear lest some species be extinct before I find and add it to my garden of wildflowers along the creek; but indeed my fear has some foundation when cattle and sheep roam by thousands over the most fragile flowers, trampling them underfoot, perhaps never to live again.

My pets flourish well, and as late as June I gathered flowers last year. The snowy lily bell of the calochortus, with the brilliant yellow of the eschscholtzia, and the delicate heliotrope of the fragrant wild hyacinth, when surrounded by a fringe of feathery fern fronds, made a more artistic bouquet than it is the lot of many to behold.

Grass Valley, Cal.

Matchmaking.

[Written for the Rural Press by HILDA DELRESTHERE.]

Some little time since the Rural Press printed an article from a well-known author on "Ethics of Marriage," and soon after one entitled "Women." These authors, as well as nearly every one who has lived to mature years, know that the world is full of unhappy marriages—so full that they crowd out of mind nearly all the happy ones; and as I believe many unhappy couples have been brought together by matchmakers, I would like to warn the careless, thoughtless matchmakers, as well as those who practice the art with fell intent, and I hope the thoughtless at least will hold their hands, or tongues rather, from meddling with the lives of others in the way of bringing about matrimonial ties.

Why connive to bring together any man and woman who of themselves would never have thought seriously of entering the marriage state? What right have you to say, "he is such a good man, and she is such a smart, good woman, they will suit each other exactly?" Who has made you judge over them? Many an honest man and many an honorable woman have suffered all their natural life from being mismated—their tastes, sympathies and conscience being so different that the burden of bearing and forbearing with the other's faults would keep one of them, and perhaps both, in continual torment.

Another matchmaker says: "I have a lady friend who is so lovely in life and heart, but she is poor, and it would be so nice if Mr. So and So, who is well off, would take a fancy to her; then she would always have a good home." She praises her friend to the gentleman and the gentleman to her friend, and repeats to them whatever kind words they say of each other.

Well, it is the strangest thing that gentlemen oftentimes cease to be gentle when they are husbands. They seem to delight to cut their wives to the heart, and though she cooks, washes, irons, mends and makes, and tends the children, he never seems to think she earns anything, but it is he who is so good to give her a home. He could not hire any one to do what she does for less than \$20 per month; probably it would cost him \$40. But the few words she said at the altar have made her his slave, and she hates to ask for a dollar. Of course there are many cases where the wife should practice the strictest economy, but then so should the husband.

I know there are hard-hearted, wasteful wives who do not know or care how much they spend—at least I have heard of such; the newspapers are full of their doings. What a pity they married till they found a man they loved well enough to consider his welfare as well as their own, and who loved them well enough to do the same.

About a year ago there came a question in the *Call* as to whether a couple could marry and live comfortably on an income of \$80 per month. If they loved each other and knew how to economize, there is not the slightest doubt but what they could, for I have known a family of five to live comfortably on \$25 per month where there was no rent to pay, and the wife did her own work and made her own and the children's clothing.

But do not let any amount of income persuade you to marry a man you do not love, or who has bad habits. Remember tobacco and whisky are bad for men as well as women, and you do not want a husband who indulges in them.

Questions and Answers from the N. Y. Weekly.

MRS. GOODHEART—Why don't you give that poor woman a dime?

Mrs. Tiptop—Mercy me! I can't afford to spare a cent. As it is, I don't see how we're ever going to pay for that \$300 dress I had to order for the charity ball.

LECTURER (who intends to trace the origin of certain dishes and give their historical significance)—Now, ladies and gentlemen, many of you will doubtless be surprised at the question I am about to ask: "Why do we eat mince pie?"

Voice (from a dyspeptic-looking auditor)—Because we are fools.

MISS FLIGHTY—Have you decided to take any part in the discussion, "What will we do in heaven?"

Good Minister—No, Miss. I am at present much more interested in the question, "What shall we do to get there?"

LITTLE BOY—Do hotel clerks get very big salaries?

Kentucky Uncle—Not often.

"Then how can they afford such big diamonds?"

"Well, you see, they don't have to pay anything for their licker."

MR. WINKS (looking over the paper)—Cheap, Drugg & Co. are selling all sorts of patent medicines at half price.

Mrs. Winks—Just our luck. There isn't anything the matter with any of us.

YOUNG FOLKS' COLUMN.

Dean and Swift, Trappers.

Phil Dean and Ned Swift were State-of-Maine boys whose fathers owned adjoining farms, and, like a majority of the juvenile residents of Northern New England, they were passionately fond of anything pertaining to hunting or trapping. Every fall a line of dead-falls or "culbeags" were set by them along every brook and pond in their vicinity in hopes some shiny-coated mink might be tolled into one of them, but somehow their labors in that line had been in vain. Once a gaunt, savage-looking "woods" cat had been captured, and again one of those little black-and-white-coated animals of unsavory odor had been found with the weighted-bar resting across its body, but as Ned said, "Mink weren't their grip." When the ground was covered with snow, however, and they turned their attention to hares, or "rabbits," as they termed them, they succeeded far better. Back of their homes extended a large tract of swampy land, grown up to small firs and alders, over which was a complete network of paths beaten by the clove-shaped feet of these nocturnal rambles. The boys would select some spot in the path where it led under some overhanging branch, and attach to this a fine, strong wire with a noose in the end, made "slip knot" fashion, which, suspended a few inches from the ground, would catch the unsuspecting hare around the neck, and before he could stop his headway the noose would tighten, and in a very short time he would be lying dead in his own highway. Often the boys would catch six or more in one night; these they would freeze up, and when they had two or three dozen they would ship them to a provision dealer in Boston. After paying all expressage, each "rabbit" would net them about 16 cents. Not a large sum, certainly, but farmers' boys have but few opportunities to pick up pocket-money during the winter months, and the boys were well satisfied.

Early one winter a sample copy of the *American Field* came to the postmaster of the office where they went for their mail, and well knowing the boys' liking for all outdoor sports, it found its way into their box, for the two families took turns at going for the mail, and the same box was sufficient for both. The boys read its pages with a great deal of pleasure, and itched to share in some of the exciting hunting and fishing adventures they recounted. Nor were the advertising columns neglected. Each cut of gun, hammer or hammerless, was commented on, and the different styles of folding-boats were subjects of endless conversations. One small advertisement in particular caught their eye and created a great deal of feverish excitement in their small bodies. It read something like this:

"LEPUS AMERICANUS. The subscriber, wishing to stock his preserves with Northern white hares, will pay \$6 per pair for them delivered alive and in good condition at any express office. Address S. V. Arundel, Booneville, Ky."

There was little sleep for the boys that night, and early the next morning they were busily engaged with saw and hammer in the manufacture of box-traps. Six of these were completed by night, and loading them on to a hand-sled, they hauled them down into the swamp, and baiting them with pieces of carrot, set them in the most promising "runs" they could find. When they visited them the next morning they were greatly disappointed to find every trap as they had left it, with a well-beaten path leading around them. Phil produced from his pocket a strip of salt fish, which he cut into small bits and proceeded to tie on to the spindles, explaining to Ned as he did so that his grandfather said that rabbits were just crazy to get at anything salt, and that "fishskin" just made them wild, it being for small bites of something salty that caused them to gnaw the antlers of moose and deer when left in the woods. The next morning one of the traps was sprung, and raising the cover slightly a mass of blue-white fur could be seen. They carried the trap home in high glee, and quartered their prize in an unused-corn chamber. As they were carrying the trap back to the swamp they started a hare out from under a small hemlock. It immediately struck into a "path," along which it hopped a little way and then rising on its haunches gazed back at them with ears very erect. An idea came into Phil's head, and dropping one end of the trap, he ran toward a lot of underbrush at their left, telling Ned as he ran to start the rabbit along when he (Phil) whistled. Bunny seemed in no haste, and before long from some little distance in advance came a low whistle. Ned clapped his hands, and the timid little animal went "pattering" his way down the path and soon out of sight. Wondering what was in store, Ned quickly followed, and hearing an excited shout from Phil, peered under the brushwood to see a scurry of snow ahead and Phil drop on to all fours over it. Dashing through the obstructions, he was amazed to see Phil emerge from a snow-bank with the struggling hare clasped in his arms. "Hurrah," he shouted, "I am the chap to catch rabbits, tell your folks," for like too many boys he was addicted to the use of slang when a little excited.

"How in the world did you ever do that?" cried Ned.

"You see," Phil answered, "I remembered that one of our wire nooses was tied up in this tree, and I knew if I could only get in ahead of Mr. Bunny, it would be only a minute's work to put it in position, and then when he came down the path we would have him. So I fixed the wire and then hid behind this stump and waited. It seemed so long before I heard him coming pat pat along, that I was awfully afraid he had got ahead of me. Oh, you three-dollar beauty!" he exclaimed, looking the trembling creature in the face, "I think we are going to get more of you in just this way." And they did. One would set the noose in the path and hide near enough to liberate the captured animal, while the other would beat about in the vicinity of the path till a hare was started, and nine times out of ten he would run his head through the loop and in another minute he would find himself tied up in an old shorts-sack, which the boys used to convey them to the house in. So successful were they that in a week they had a dozen nice, healthy hares in the old cornroom, and deeming this a sufficient number for one shipment, they procured two shoe-boxes from the store at "the Corner," and slating the fronts of them, put six into each box. A good allowance of carrots, and salt fish too, was put in with each colony. Then two large pieces of cardboard were nailed, one on each box, Ned having lettered them as follows:

S. V. arUndeL?

boONevilleLe-KY.

From DEAN & S W I F T, KEtCHers ov Hairs
WOODVILLE, MAINE.

Pleas Watter the animals.

The express agent at "the Corner" had a good laugh when he read the address, but that it was readable was proven when about a fortnight later a letter addressed to Dean & Swift, Trappers, came to the Woodville postoffice. It was from Mr. Arundel, and as the boys opened it a narrow slip of paper fell to the floor. Ned looked at it first on one side and then on the other, but could not understand it. Phil meanwhile read from the letter that the hares had arrived in first-class condition, and that they might ship 20 more as soon as possible; also that Col. Ranter, a neighbor of Mr. A's, would soon order a few dozens.

"But," says Phil, "there isn't any money here. He only says he has 'inclosed a check in full to date.' What does that mean?"

"I suppose this must be what he means," said Ned, holding up the slip of paper, "because it says \$36, but I can't see even one dollar, can you?"

"What is the matter, boys?" asked Mr. Ring, the postmaster, who saw they were puzzled over something.

"It's this scrap of paper," said Phil, handing it to him. "What does it mean, anyway?"

"Why," replied Mr. Ring, "that is a certified check, and if you will sign your firm name on the back of this I will give you thirty-six dollars for it."

It was two happy boys who trudged home that night, for in spite of their father's assertions that they would never hear anything more from their "menagerie," as they had termed the crates of live hares, the boys had persisted in their work, and now had 14 more confined in the corn-room.

Before Mr. Arundel's order was completed, one came from Col. Ranter for two dozen. They only had time to fill this before the snow left in the spring; but with over one hundred dollars in their pockets, they felt well pleased with their winter's work. The next fall they took their money to pay their expenses at an academy in a neighboring town, and we venture to say that when they next shipped a crate of hares the expressman saw no reason to laugh at the address.—J. C. Mead in Portland (Me.) Transcript.

GROWTH OF HAIR AFTER DEATH.—A remarkable case of the growth of hair after burial recently came to light at the disinterment of the body of Amzy Coeyman, who died in Belleville, N. J., over four years ago and was buried in the old private cemetery of the Coeyman family. When Mr. Coeyman died his beard was about two inches long and the hair upon his head was the usual length worn during life. When the coffin was taken up for reburial in Mount Pleasant cemetery it was discovered that the beard had grown to the length of two feet, and that the hair upon the head had also grown out from the sides and front of the face, completely obscuring the latter from view. When brushed back it was found that not only the face but also the body were in a remarkable state of preservation.

A BRAVE PRIEST.—The gallant fight which Father O'Hare has been making against the saloons of Greenpoint, L. I., has resulted in several wealthy members of his congregation, who are interested in the liquor business, leaving his church. Father O'Hare, nothing daunted, continues the work of organizing the American League of the Cross, whose members pledge themselves to keep away from all saloons. He declares that more money has been taken in the collections in his church since the withdrawal of the saloon keepers than ever before, which he attributes to the fact that his people have more to give to the church, having spent none in the grog shops. Nine-tenths of the crime in his parish, says Father O'Hare, comes from the saloons. The liquor dealers, it is claimed, are organizing for mutual protection. Exchange.

GOOD HEALTH.

The Passion and Danger of Anger.

Anger is a passion most generally excited on the moment, which subsides more or less rapidly, according to the nature of its cause. It always exerts a powerful and deleterious influence upon the system, which becomes augmented in proportion as the passion approaches toward insanity, as, when it becomes furious and ungovernable.

A person in a fit of anger may be at once recognized by the redness of the face, the furious sparkling of the eyes, and the violent agitation of the whole system. Some are unable to speak, while others are extremely voluble and vociferous; not unfrequently, persons foam at the mouth in a fit of anger. Some persons when angry, gesticulate violently, stamp their feet and display an uncommon degree of physical strength; others involuntarily shed tears.

Violent anger is very deleterious to health, and the more often it is suffered to be aroused, the more frequently will it develop itself upon even trivial causes. From its action upon all the functions of the system, it is liable to cause epilepsy, the rupture of a blood-vessel, convulsions, fainting, apoplexy, and even sudden death. Moderate anger is apt to be longer continued, and accompanied with hatred, malice, revenge, regrets, etc., rendering the person fretful and petulant, and gradually inducing some permanent disease. They who lead a life of voluptuousness and dissipation are the more ready subjects of this passion. Suckling infants have often been thrown into convulsions after having partaken of the breast-milk of a previous angered nurse.

To overcome the propensity to angry feelings requires much resolution and perseverance. As with fear, it is necessary to have a constant watch upon our minds, maintaining a degree of presence of mind upon the most sudden emergencies, and promptly repressing every angry feeling as it arises. The most powerful means of suppressing this passion is at once to concentrate the whole of the mental powers and resolve to overcome it; let the higher powers of the mind control the person. It is the power of thinking, reasoning and judging that renders man superior to the brute. When angry, contentious words only tend to fan the flame; it is better, therefore, to be silent, to take a draught of cold water, to withdraw one's self from the exciting cause, or adopt any other simple means, until the anger has passed away and reason resumed its sway. Never attempt to settle business when the mind is in an irritable or fretful condition. Persons of an inflammable disposition should be temperate in food and drink, especially avoiding the use of stimulating food and intoxicating drinks. The true gentleman, the man of proper education, can always hold command over this passion.

Children should be carefully guarded from those causes which will arouse and cultivate their angry passions. Improper punishment, disappointments, tyrannical conduct, partial justice, etc., should be carefully avoided. Children have their rights, which should be held sacred by every parent and teacher. Instead of being treated as mere machines, slaves, or brutes, they should be governed by such methods as will repress evil and cultivate virtuous propensities, remembering that they are but men and women in miniature, possessing every mental attribute common to the adult, though more keenly susceptible and alive to external impressions. "Train up a child in the way he should go, and when he is old he will not depart from it," is a truth too little understood, or too little acted upon in the present age, for instead of training and properly educating them, they are more frequently driven up as one would drive cattle to market.—Yolo Democrat.

DANGER IN THE CORN-COB PIPE.—"Your head aches, your eyes bother you, and your throat is always parched," said a well-known physician, diagnosing the case of a patient. "Now, I can tell just what brings on these difficulties. You smoke a corn-cob pipe. Isn't that a fact?" The sufferer replied in the affirmative, but was curious to know how the doctor learned what kind of a pipe he used. "I see so much of this that I couldn't help knowing what ailed you," explained the medical man. "Men apparently enjoying perfect health come to me every day. They are great big robust fellows, and they all suffer from the same cause. At first I was non-plussed, and led myself to believe that it was a new disease, but I finally discovered that the whole trouble was caused by corn-cob pipes. It needs no credulity on your part. Notice yourself when you are smoking a corn-cob, a sickly, overpowering odor, which fills up your throat and lungs and causes a smarting sensation of the tongue. That is the smoke of the burning cob, and it contains enough creosote to cure a ham."—N. Y. Sun.

NEW USE FOR POND LILIES.—A species of pond lily that grows everywhere in the Eastern States, it is said, was recently recognized by a Chinese botanist as a famous Chinese food, the delicacy of whose potato-like root is considered finer than the best yams. The discoverer sent specimens to a Chinese farmer in California, who planted them and raised nearly a ton, which, it is said, are selling at the rate of 20 cents per pound.

NATURE'S METHODS.—Dr. Wythe, Professor of Microscopy in Medicine, lectured on "The Bright Side of Disease" at Cooper Medical College some time since. He said disease was a wicked demon, as the Chinese believe; not an effort of nature to throw off morbid matter; not an affair of the imagination to be cured by an effort of will—all these were bingaboos. Nature's methods should be observed. "Take, for instance, a fainting spell," continued the doctor. "The prostrate position into which a fainting person falls is the best possible posture. Consequently, a person who has fainted should never be lifted to an upright position. In a fever one wants liquids because the stomach is weak and cannot digest solid food. A physician's duty is not to prescribe an antidote, but to remove obstacles in the way of nature, then the *vis medicatrix nature* will do the rest. When a limb is broken and the surgeon has fitted the broken parts together, Nature pours a kind of fluid all around them which hardens into a perfect cylinder, fitting the bone exactly. Besides this, a plug appears in the hollow center of the bone, uniting the parts until perfect union has taken place. Then cylinder and plug are gradually dissolved."

POISONOUS MACKEREL.—There has been a correspondence in the *British Medical Journal* on the subject of poisoning from the eating of mackerel. Details are given of several cases, and in commenting upon them, Dr. A. W. Flood, surgeon R. N., retired, writes from Bundoran: "I believe the cases that I have seen were caused, not by eating the mackerel when out of season, but rather to the fish being too long kept, and, in addition, being exposed on a cart to the heat of the sun for sale. I believe mackerel to be a most dangerous fish for food, unless great care be taken to get them fresh, as ptomaines are developed very rapidly in them. I may say the residents here do not consider them safe when they are more than 24 hours out of the water."

DOMESTIC ECONOMY

Tested Recipes.

[Written for the Rural Press by ADA E. TAYLOR.]

Maple Sugar Caramels.—Break two pounds of maple sugar into small pieces and put into a pan on the fire with one quart of rich milk. The pan must be deep enough to allow the sugar to expand as it boils; stir without ceasing; test as usual in cold water, and when it is sufficiently brittle it is done; then pour into square buttered pans and score with a knife into small tablets.

Parlor Candy.—Beat the white of one egg very light, add one tablespoonful of water and one pound of confectioner's sugar; mix gradually until it becomes a smooth paste. Flavor with vanilla or to taste. If this seems it too much, add a little more sugar; mold and let stand in a cool place for about 20 minutes. For chocolate creams, mold into balls and dip in melted chocolate. For solid chocolate, mix grated chocolate with the paste. A great variety may be made by using walnuts, almonds, cocoanut or preserved fruit.

Orange Charlotte.—Line a mold or bowl with lady-fingers or slices of sponge cake. Soak one-third of a box of gelatine in one-third of a cup of cold water until soft; then pour on one-third of a cup of boiling water and one cup sugar and the juice of one lemon. Strain and pour in one cup of orange juice. Cool in a pan of ice-water. Beat the whites of three eggs stiff, and when the orange jelly begins to harden, beat it until light; then add the beaten whites and beat together until stiff enough to drop. Pour into a mold.

Raspberry Pudding.—Put one quart of raspberries into a deep dish; mix with five tablespoonfuls of sugar; mash the raspberries slightly with the back of a spoon. Beat six eggs as light as possible, and mix with one pint of cream or rich milk, and six tablespoonfuls of sugar. Flavor with lemon. Set the dish immediately into a moderate oven, and bake the pudding about half an hour. When done, set the dish on ice so that it will be thoroughly cold before it is served. A similar pudding may be made with ripe currants or strawberries.

Side Dish of Cold Meat.—Take one cup of chopped cold meat, season and add two eggs well beaten, one ounce of butter, and one large slice of bread soaked in boiling milk; mix well together. Form into round cakes and fry in nice drippings.

Paradise Pudding.—Peel and chop six apples very fine; add to them the grated rind and juice of one lemon, half a teaspoonful of salt, same of grated nutmeg, six ounces of sugar, one and a half cups of bread crumbs, and one glass of brandy. Beat six eggs and add last of all. Boil or steam in a well-buttered mold for two and a half or three hours. Serve with wine sauce.

Ginger Apples.—Peel and core four pounds of apples and cut into quarters. Put them immediately into a basin of cold water; when all are peeled put them into a preserving-pan with enough water to cover them; boil for 20 minutes and strain them through muslin; set the juice on the stove again, and boil it with four pounds of sugar, the grated rind and juice of two lemons, and a heaping teaspoonful of ground ginger; boil for a quarter of an hour, then put in the apples and simmer very gently for three quarters of an hour.

The Week.

The last rain is the best of the season and completely washes the tears from the faces of the croakers. When the dispatches speak of the sinking of railway embankments and the washing away of the outer ends of the wharves at the coast landings, one does not need to stand out in the wet to know that a good old-fashioned storm is on. The sou'wester has risen in its wrath for the first time this winter, and the result is valuable beyond computation both in material promise and in popular emotional elevation.

The rain, which is not over as we write on Wednesday evening, has reached nearly all

parts of the State, and in the interior valleys, where it was most needed, the downpour has reached drenching figures. So far as can now be judged, the outlook is for immense cereal and pasture crops and corresponding favors for tree and vine. Though there has been much apprehension during the last few weeks, the present storm gives confidence, for with the customary later showers there will be abundance. Already the record has passed that of last year at most points, and a sequence of growing weather will turn the State into expanses of waving grain and blooming flowers. It will be a good year, after all.

Against the Meat Combine.

A convention of legislative delegates from Nebraska, Minnesota, Colorado, Texas and Kansas, met at St. Louis on Tuesday to consider measures for fighting the alleged beef and pork trust.

After a temporary organization and the appointment of committees, Albert Head of Iowa introduced a preamble and resolution, reciting the evils of the Chicago and other combines and declaring that as the State laws are inadequate to remedy the evil complained of, Congress be requested to pass a law, with adequate penalties, "prohibiting any corporation, company or individual from entering into or becoming a party to a pool, combination, trust or confederation for the purpose of regulating, fixing or controlling the price of beef, pork, grain or other productions of the country; and that the Interstate Commerce law be amended so that it will work in harmony with the law above requested." Referred.

Craft of Illinois then offered the following:

Resolved, That we have been sent here to investigate as to the existence of a meat and beef combine or trust, and its mode of operation and its effect upon the price of cattle and meat, for the purpose of basing upon the findings such remedial legislation as may be necessary that can be lawfully enacted by the different States.

The object of this resolution, as stated by the members of the Committee on Rules, was to switch the convention off into considering whether such a thing as a beef trust or a monopoly exists, and so divert attention from the announced purpose of the gathering—namely, to recommend needful legislation. The resolution went to a committee.

Among other resolutions offered and referred was one memorializing Congress to make such amendment to the Interstate Commerce law as shall punish all interference or discrimination by railroads in the transportation of beef or pork in any its forms.

Tuesday night the cattle-feeders held a meeting, and protested against the efforts of the "Butchers' combine" to break down the dressed-beef business. Hon. Lafayette Funk of Illinois addressed the meeting. Resolutions were adopted protesting against any action on the part of the representatives that will have the least tendency to restrict or hamper the existing competition for live cattle; favoring the most critical and impartial national inspection of cattle and the products thereof at the place of slaughter.

The convention, which is still in session as we go to press, owes its significance mainly to the fact that it is made up neither of cattlemen nor of butchers, but of members of the Legislatures of different States.

An Excellent Appointment.

We are glad to learn from Eastern papers that Mr. S. N. Dexter North has been appointed Secretary of the National Wool Manufacturers' Association as successor to the late Dr. Hays, whose eminent services to the wool industry of the country have made his name familiar to every flock or loom-owner in the United States. Dr. Hays died about two years ago, and his place has not been filled hitherto because of the desire of the directors to select one fitted to carry on the work with the industry, spirit and genius which were characteristic of Dr. Hays. That they have secured such a man in Mr. North we know from personal acquaintance and association with him, beginning in college days, nearly 25 years ago. He is thoroughly sound on the tariff question and has for years made a study of the facts which win his advocacy. He has a natural taste for statistical data, and has by long journalistic experience acquired great facility in their collection and effective use. He is master of a

free and trenchant style of composition which has always been feared by those who have endeavored to foist fallacies upon the public attention in the guise of truths. We count Mr. North's enlistment in behalf of the woolen interests of the country very fortunate, and we expect a general recognition of the valuable services he will render.

Orange Auction in Chicago.

On Tuesday, March 5th, there was an auction sale of California oranges in Chicago, the fruit being put up by the Earl Fruit Co. and near-by growers. The sale was conducted by the well-known house of Richard M. Montgomery & Co. From the account of sales furnished us by the auctioneers we tabulate the following:

No. boxes.	Oranges per box.	Variety.	Price.
12.....	200 to 250.....	St. Michael	\$2 30
20.....	300 to 350.....	"	1 90
22.....	112 to 128.....	Wash. Navel	3 60
41.....	150.....	"	2 50
21.....	176.....	"	3 00
18.....	150 to 200.....	Seedling	2 35
15.....	226 to 250.....	"	2 15
62.....	300.....	"	2 00
13.....	360.....	"	1 95
20.....	128 to 200.....	"	2 30
10.....	128 to 175.....	Wash. Navel	2 60
20.....	200 to 250.....	"	2 30
31.....	150 to 170.....	Med. Sweet	2 30
20.....	200.....	"	2 20
38.....	226 to 250.....	"	2 30
25.....	128.....	Riv'side Nav.	4 55
25.....	112.....	"	4 60

Out of the offering which included the above sales, about 200 boxes were withdrawn. It cannot be claimed, perhaps, that the sale is especially significant, but it is certainly of considerable interest to growers.

The first Riverside Navel oranges of the season reached New York March 5th, and were received by Edward L. Goodsell, 103 Park Place, who makes a specialty of Florida and California fruits. Mr. Goodsell makes a very flattering report concerning this shipment, and speaks as follows:

They sold readily at \$5.50 for the 112 and 128 size fruit to the box. I pronounce the quality, as a lot, superior to any we had this season from Sicily, Spain or Florida. If the people of California can grow such fruit, and get such rates of freight as would allow it to be sold at a fair figure in this market, the future consumption in the East would be so great as to take the entire crop without any trouble.

This is an important assurance, in view of the quite general disposition to plant oranges in all favoring situations.

Death of Carlton Newman.

It is with sincere regret that we have to record the sudden death of Carlton Newman, president of the San Francisco Glass Works. Mr. Newman was suddenly stricken down when in apparently good health. He was out on business on the evening of Friday, the 7th inst., and returned home slightly indisposed. He rested well that night, but arose in the morning feeling still more unwell. His trouble appeared to be in his respiratory organs, coupled with weakness and irregularity of pulse. These symptoms grew rapidly worse until about 1 o'clock, when he died from failure of action of the heart.

Mr. Newman arrived in San Francisco in 1862. He had already acquired a thorough knowledge of the glass manufacturing business in Pittsburgh, and upon his arrival here saw an opportunity to build up that industry in this city. He started on a small scale at the corner of Rich and Townsend streets, but inside of two years his works were totally destroyed by fire, and he was left penniless. But nothing daunted, he immediately went to work with his friends and soon re-established himself again in the same business. From that time to the time of his death he has prospered, and built up a large and important industry, which now ranks among the most flourishing in the city.

In a short time after his second start he effected a consolidation with the Pacific Glass Works. At the time of his death he was sole proprietor of the extensive works under his charge. He was an inventor early in life, and secured the means of reaching this coast by the sale of two inventions. Mr. Newman was born in Wheeling, West Virginia, June 26, 1829. His life since he reached manhood has been one of busy and successful industry, and he largely enjoyed the respect and confidence of all with whom he came in contact. He was a man of warm and general impulse; manly and outspoken in all things. He fulfilled all the pre-

cepts of practical religion. Liberal in all things, there was nothing of narrowness about him either in religion, politics or social life. As an evidence of the estimation in which he was held by his employees, we need but refer to the fact that nearly all were present in a body at the last solemn rites over his remains.

Mr. Newman was an active member of the Manufacturers' Association of this city, and had just been elected a Director of the Mechanics' Institute. He was a Royal Arch Mason and member of Occidental Lodge of this city. He was also an Odd Fellow and member of several beneficiary associations. He leaves a widow, one son and three daughters—all of the latter married. He left two half-brothers, one Wm. H. Murray of the *Journal of Commerce* of this city and the other in business in Chicago. He was buried in accordance with the beautiful and impressive rites of the Masonic ritual. Notwithstanding the stormy character of the day, the large hall of the Masonic Temple was crowded by those who sought to do honor to his memory by their presence at the last sad rites which consigned to the earth all that was mortal of Carlton Newman.

A Floral Masterpiece.

The California State Floral Society is speedily advancing in popular interest and appreciation, and in the papers, discussions and exhibits brought forward at its meetings. The meeting on Friday of last week was a very good one. Much work was done in preparation for an exhibition which will be held in May next in this city, for which the final details will probably be arranged at the next meeting.

But we allude to the meeting especially at this time to speak of an exhibit of rare flowers made by John H. Sievers, one of the directors and an energetic participant in the work of the organization. We count this especially significant to show that in a new country, with the whole atmosphere filled with the industrial spirit, we are not losing sight of the pursuit of the beautiful for its own sake, and not altogether lacking in devotion to cultures the measure of which is not the purse alone. The exhibit of Mr. Sievers to which we allude consisted of a collection of orchids rarely, if ever, put together in a better or more tasteful style for exhibition purposes. The flowers were arranged on a moss-filled panel and included most all of the very choicest winter-blooming varieties of that beautiful and expensive class of plants—the orchids. Mr. Sievers thus placed together the most costly pets in his collection—not single flowers, but trusses or clusters of natural growth. A few of the varieties shown will be named to show to the connoisseur what a rich treat Mr. Sievers gave the society by his enterprising contribution: *Cattleya mossiae*, *trianae* and *Ludemannii*; *Phalenopsis amabilis* and *Schilleriana*; *Oncidium Cavendishii* and *grande*; *Lycaste Skinneri* and *aromatica*; *Lelia acuminata*; *Dendrobium nobile* and *Hillii*, etc. The splendor of the wondrous forms and varied hues of these rare blooms was well offset by the magnificent flowers of *Anthurium Andreanum* and *Scherzerianum* and with beautiful leaves of ornamental foliage, plants and ferns. The whole display was rare in conception and material, and would have been marked even among the most famous creations of the orchid shows in older regions of the world.

RESULTS OF ENTERPRISE AND SMALL HOLDINGS.—We call attention to the interesting and important remarks by James Boyd of Riverside at a meeting of Tulare Grange, which appears on page 245 of this issue. The secret of Riverside's prosperity and advancement cannot be too widely heralded, for they point the way to the development of many other regions in a similar manner. Mr. Boyd's remarks refer pointedly to these facts.

A GOOD SELECTION.—The appointment of Hon. John F. Swift of this city to be Minister to Japan is one that meets with general approval. It was fitting that our representative at the Mikado's court should be a citizen of the Pacific Coast, and Mr. Swift's acquaintance with the Japanese and their country renders him singularly suitable for this important mission.

CUSTOMS OFFICERS at Los Angeles and San Diego are of the opinion that much smuggling is done from the islands off the coast of California and Lower California.

California Grapes.

The beautiful picture upon this page calls forcibly to mind one of the chief horticultural masterpieces of California—the grape product. The picture is a direct reproduction from a photograph showing a section of vine in fruit, growing beside a cottage residence in the city of Bakersfield, in Kern county, the vine making a trellis of the posts which sustain the piazza. It is of the Black Hamburg variety—a grape famous in the covered graperies of England and the Eastern States, but of course rejecting such protection in California—in fact, thriving and bearing fruit of size and delicious quality beyond anything grown under glass in less favored climes.

The showing of this profuse fruiting of the grape naturally calls attention to the locality of

grown on small trees, the shorter the stump and the nearer the new canes come to the ground the better—in the warm interior valleys. Still when a vine is allowed to have its own way, and to rear its head aloft with some tall support to cling to, its growth and its weight of fruit are quite beyond the belief of those who have never seen them.

The Black Hamburg grape at a distance is the pet of the nobility who can erect glass palaces for its protection. The Black Hamburg grape in California is the friend of the humble settler, over whose habitation it will throw its bower of leaves, sheltering him from the fervid summer sun and yielding him fruit of grand size and vast amount, as the engraving indicates.

A PEAR TREE OVER THREE CENTURIES OLD. The Garden (London) gives the following de-

Action by Ayrshire Breeders.

C. M. Winslow of Brandon, Vt., Secretary of the Ayrshire Breeders' Association, informs us of the annual meeting held in New York February 21st. Among the officers we find that of George Bement of California as one of the vice-presidents.

Prof. Collier of the New York Experiment Station and Prof. Sears of the New Jersey Experiment Station were present, and stated their plans for testing the different dairy breeds, and asked the co-operation of the association in selecting representative Ayrshires for their tests. The association instructed the Executive Committee to examine and select representative Ayrshires for any station that might request it.

The association indorsed the action of the California Legislature by passing resolu-

THE NEW STATES.—Delegates to constitutional conventions in each of the proposed States of North Dakota, South Dakota, Montana and Washington, will be elected on the Tuesday after the first Monday in next May, and will meet to draft constitutions July 4th. Elections to ratify the constitutions thus agreed upon will be held on the first Tuesday in October, and when adopted it becomes the duty of the President by proclamation to admit the States formally into the Union. Each will be entitled to one member of the House of Representatives, except South Dakota, which will have two.

HORSESHOEING BY ELECTRICITY.—A novel use of electricity is about to be tested in sharpening the shoes of car horses in icy weather without removing them from the stable. This

BLACK HAMBURG GRAPEVINE, GROWING AGAINST THE PORCH POST OF A COTTAGE IN BAKERSFIELD, CAL.

its growth, which is now rapidly coming to the front in products and development. An article upon another page of this issue gives some interesting facts descriptive of the new life of Kern county, to which the reader is referred. Among the many adaptations of the region, its fitness for the production of the finest raisin grapes, and the exceptionally favorable climate for the curing of raisins, cannot be overlooked. The same is true of the growth of the finest orchard fruits for drying, the apricot, the peach, the nectarine, etc. The future fruit product of the upper San Joaquin valley will be beyond anything which is now imagined.

It is worthy of note for the information of the distant reader that grapes are not usually grown as is indicated in this picture. It is only when a vine is desired for ornamental purposes or shade, as well as for fruit, that it is allowed to take to itself such extension. Our vines are usually low pruned, and those varieties which thrive under the treatment are cut back each year almost to the short stump, so that our grapes might almost be said to be

scription of a remarkable French pear tree, which, although over three centuries old, is still bearing fine fruit in abundance: There exists in the garden of M. Mengnot, at Pollet, France, outside the town of Dieppe, *Seine-Inférieure*, an espalier pear tree, the oldest and largest that probably can be found in Europe. This is a tree of the pear *Cueillette* or *Epargne*, grafted on the free stock; it is planted against a wall eight meters high, and in a clayey soil. The stem is one meter in thickness; each lateral branch is 70 centimeters in diameter; it is 30 meters in width, and is in a southern exposure. Its growth is vigorous, and the tree bears each year from 3000 to 4000 pears. Its date of planting, written on a stone placed in the wall, was 1580, in the reign of Henry III. The property where it was found planted was formerly a hospital. This venerable tree is taken care of by the owners, so that even now a long life is assured it.

A POSTOFFICE has been established at Twin Oaks, San Diego county.

tions requesting each State to enact laws in regard to false pretenses in obtaining registration of cattle; also indorsing legislative Acts for the suppression of the manufacture and sale of oleomargarine and other forms of bogus butter. They also instructed the Executive Committee to prepare a list of approved judges of Ayrshire cattle to send to any fair association that might request it, from which they might select reliable judges for their fairs.

HAS BECOME EXTINCT.—One of Scotland's rare marshy plants, the *Scheuchzeria palustris*, a genus of the order of arrow grasses, has, according to Prof. Hillhouse, become extinct. It was to be found only on the moor of Methven in Perthshire; but some 300 or 400 black-headed gulls have settled down on this moor and annihilated every trace of vegetation.

THOS. BRASSELL of Guild Lake, Or., has 100 hives of bees. They have been busy every day this winter in gathering pollen from the willow trees.

important application of electricity is being made by the Baxter Electric Manufacturing Company of Baltimore, and is likely to prove one of the most useful applications yet made of this subtle force, and will especially commend itself to the Society for the Prevention of Cruelty to Animals.

A POSSIBLY NEW TEXTILE.—A French paper reports that from a plant called kanaff, which grows in the summer on the shores of the Caspian, M. G. Blakenbourg, a chemist, has obtained an admirable textile matter, which is soft, elastic, tough and silky, and which can be bleached chemically without losing these properties. The resistance of this new material is said to be far greater than that of hemp, while its specific weight is much less.

IN recasting the U. S. Senate committees Senator Stanford has been placed on the Committee on Education and Labor. This was done at his request, as he desires to promote his bill to aid in the development of co-operation among workmen.

AGRICULTURAL NOTES.

CALIFORNIA.

Calaveras.

TOMATOES.—*Angels Echo*, March 6: E. K. Stevenot of Carson Hill showed us several ripe tomatoes which he picked last Saturday from a vine in his garden. This is another feather in the cap of old Calaveras. Just think of it! ripe tomatoes on the 2d of March.

Fresno.

A HONEY DISTRICT.—*Fresno Expositor*, March 6: Wm. Henry of Los Gallos creek, on the West Side, was in town this morning. He was in good hopes of an excellent crop in that locality, the growing grain flourishing finely. He is located near the coal mines, on the border of Pleasant valley. That section is well watered, there being an abundance for irrigating purposes. This settlement is one of the great honey-producing sections of the State. From there was shipped last year, Mr. Henry informs us, 400 tons of honey. Nearly every settler has numerous stands of bees, our informant having 180.

FRESH GRAPES.—*Fresno Republican*, March 8: Some Flaming Tokay grapes were on exhibition at the Board of Trade rooms yesterday. They had been picked fresh from the vine; and this is March.

Kern.

PRACHES, RAISINS AND BAMBOO.—*Bakersfield Echo*, March 7: We went out to Charlie Maul's the other day to see the sights. His peach orchard is nicely trimmed and ready for the spring plowing. His raisin vineyard is looking well and will bear much fruit this year. With his peach orchard and raisin vineyard, Mr. Maul is a rich man. The peach trees are mostly five years old this spring, and for the last two years have given their owner an income of about \$400 per acre, with no other labor than was necessary in cultivating the trees and picking the fruit, as the latter was shipped East just as it came from the trees. Mr. Maul is the pioneer of Kern county in another line of business. He was the first to plant bamboo with a view to raising a material for fencing. He now has an acre set to bamboo, and although it is but a year since the roots were planted, the ground is well stocked and the growth of last year would make many thousand pickets.

THE RABBIT DRIVE last Sunday was a great success, and so was the dinner. Over 4000 rabbits were killed. Another drive will be had to-day at the same place.

Merced.

THINNING OUT JACKRABBITS.—*Merced*, March 11: A big rabbit-drive was held on the plains about five miles southwest of town to-day. People from all parts of the county assembled in carriages, on horseback and on foot. About 12 o'clock the sport commenced. Although there had been quite a heavy rain the night before, the day was warm and pleasant and the ground dry. Over 500 people engaged in the drive, and about 1000 rabbits were killed in the corral and round up.

Nevada.

IRRIGATION PROJECT.—*Grass Valley Tidings*, March 9: Some 70 farmers and land-owners, with a sprinkling of miners, met at Webster's hall this afternoon to take steps looking to the construction of a large irrigation ditch from the South Yuba canal down over Kress' Summit, through Allison ranch and Forest Springs to Magnolia district. Ben Taylor presided and M. J. Higgins acted as secretary. A motion to appoint a committee, consisting of two from each school district considered in the project, to interview the water company, was carried. The committee was authorized to induce the water company to make a preliminary survey of the route to be traversed; this done, the committee is to circulate an agreement among the owners of the land crossed, binding them to grant the right of way or to name their price for said grant. Another general meeting is then to be called by the committee and the reports submitted for consideration.... Over 40,000 acres of land, including Chicago Park, two-thirds of which is arable, may be irrigated by the proposed ditch. Power for a dozen mines will be provided. The main ditch will be from five to nine miles in length. All in all, the project is the most important ever broached in Nevada country.

Placer.

HORTICULTURAL ITEMS.—*Auburn Republican*, March 6: The trees at the orchard of the Auburn Orange Co. are looking splendidly. There are about 27 acres of orange trees planted there now, besides a large number in the nursery, and they are all making a remarkable growth. Down at Rattlesnake Bar, Robert Hector has 1000 young orange trees a year old which look just as fine, and he is planting more this season. His cherry trees are blossoming out, and he says there is every indication of a big cherry crop. A little farther down the river at Horseshoe Bar, J. W. Smyth has one of the prettiest places to be seen in the foothills. The results of thorough work and neatness are very evident on Mr. Smyth's place. The beautifully kept grass plats and flowers, the shrubbery and large orange trees in front of the house, are all as trim and neat as the best of gardeners could make them, and arbored seats on the bluff overlooking the river make the place delightful. Mr. Smyth has a large

number of cherry-plum trees which have been in full bloom for a week, and their great masses of white blossoms make a wonderfully pretty picture. The belt along the river appears to be the best of all places for that particular fruit, which there ripens earlier and comes to greater perfection than elsewhere. Mr. Smyth's cherry orchard is also in fine condition, and he expects to have a good many boxes on the market before May.

San Benito.

HOLLISTER HORSE MARKET.—*Free Lance*, March 8: Sixty-five horses were registered in the horse market last Saturday. Few buyers were in attendance, owing to the fact that the San Francisco market is overstocked with horses of all descriptions. However, 18 horses were sold during the day, principally to buyers from San Francisco, San Jose and Santa Cruz. The prices obtained averaged \$125 each.

San Diego.

SELECT SPECIMENS.—*San Diego Union*, Feb. 28: The excellent work being done by the Chamber of Commerce is fully appreciated by the strangers now in this city. More than 2000 have inspected the exhibit during the present month, notwithstanding several days' rain last week. Last Saturday the number of visitors was 225. The display is constantly changing in its varied features. Yesterday Maj. Levi Chase brought in from his place in the Cajon a number of large branches of delicious oranges, one spray of three oranges weighing four pounds, and all being proportionately large. His collection includes mandarin, Navel, blood and seedling oranges, and mammoth Lisbon lemons. This fruit from Maj. Chase's is the first produced by irrigation from the San Diego flume. J. C. Jackson of Tia Juana enriched the exhibit yesterday by a 51-pound beet, and a family of seven squashes from one vine, weighing nearly half a ton—a pretty good growth for one squash seed. Mrs. M. A. Stiles has just sent in from Spring valley a fine collection of Navel and Mediterranean oranges, limes and Lisbon lemons. Among the smaller additions to the exhibit during the past few days are some fine tomatoes, raised by C. R. Trussell of Tia Juana, and a pear tree showing one year's growth from F. W. Shultz of Japatal. J. H. Tibbals of this city contributes fine tomatoes, and C. W. Withrow, also of this city, specimens of cassia. T. Mings of Linda Vista sends green peas, which are not a novelty at this season except to strangers. Jos. Lester of Fallbrook sends a fine sample of green beardless barley, showing mammoth growth, while Pete, the blacksmith, has sent a fine specimen of growing oats. Sin Sen, a Mission valley Chinaman, contributed two enormous heads of cauliflower. He is not the only Chinaman who has taken interest enough in the development of the county and in the success of the exhibit to let the world know what he is doing.... A fine specimen of cirio, one of the curios of plant life, gathered by Mr. Turrill in Lower California, is growing finely, notwithstanding it has been out of the ground since a year ago last November.

THE "BACK COUNTRY" THRIVING.—*San Diego Union*, March 7: During the past year thousands have settled in the valleys back and to the northward of San Diego, and the acreage under cultivation is four or five times larger than it was last year. W. J. Riffenberg returned Wednesday from a visit through the Cajon and reports fully 5000 acres in the Cajon, and more than that number of acres have been broken between this city and that beautiful valley. The farmers have been breaking ground rapidly and besides putting in grain, have been planting large orchards and vineyards.... In the Ferris valley large orchards of orange, as well as large vineyards, have been planted this year, and it will not be behind the rest of the county in furnishing the supply of the soil. A trip up the Sweetwater valley will show an immense amount of newly cleared and newly broken ground. From Tia Juana and the Otay mesa come further encouraging reports, and from all sections the word is sent in of great advancement during the past year.

Santa Barbara.

EDITORS PRESS:—The prospect is good for more rain. Thunder yesterday, thunder to-day. Our late rain of 1½ inches was of great service; still it will require considerable more to make very good crops. Crops look well on land that was properly cultivated soon after the first rains. The safest plan is to plow as soon as it rains; if after rains render the plowing almost useless, the labor only is lost and not the crops; plowing can be done again and crops raised every year.—S. P. SNOW, *Santa Barbara*, March 6th.

Santa Clara.

EDITORS PRESS:—We are having very pleasant weather and the country presents a beautiful appearance with its fields of green and its almond orchards in full bloom. The apricot trees are blossoming very fast and promise a large yield. The roads are in fine condition, the late rain having laid what little dust there was, and left them as hard and smooth as a floor. Santa Clara county has as good roads as any in the State—which makes wheeling a pleasure.—GEO. W. GARDNER, *San Jose*, March 5th.

FAIR DATE CHANGED.—*Mercury*, March 10: At a meeting of the Santa Clara Valley Agricultural Society yesterday afternoon, at the office of Montgomery, Rea & Co., the time of holding the fall fair was changed from Sept.

30th to Oct. 5th, which will be after the Stockton fair. The dates first decided upon were Sept. 2d to 7th.

Shasta.

HYDRAULICKERS ENJOINED.—*Redding Democrat*, March 6: Last Friday papers were served on the owners of the Hardscrabble mine, on North Fork of Cottonwood, and the Drew mine, on Roaring river, all hydraulic mines, temporarily enjoining the operations of those mines. We understand that the injunctions are all made on one complaint, at the instigation of farmers on Cottonwood creek, who allege that their farms are seriously injured by the deposit of debris in the stream washed from those mines. The cases will come up for hearing in the U. S. Circuit Court in S. F. on or about the first of April next, when the complainants will move to have hydraulic mining in those mines permanently enjoined. It is admitted that the years of washing debris into Cottonwood creek has filled the bed of that stream to a considerable extent, causing overflow during freshets and deposit of sediment on rich bottom lands.

IRRIGATION DITCH.—W. D. Nicholson finished the survey some days ago of the irrigation ditch for John Hunting, taking the water from Cow creek, just on the outskirts of Millville, and following the east side of the valley as far south as A. B. Stevens' farm. Mr. Hunting purchased on Cow creek last fall for the purpose of raising alfalfa for stock-feeding, and is making preparations for the water which will cover all his bottom land. Continued, the ditch will water every foot of bottom land on the east side below Mr. Hunting's. Being excellent, rich soil, among the best in the county, the land covered by the ditch will become trebly valuable.

MISCELLANY.—*Anderson Enterprise*, March 7: Grain in Happy Valley is looking as well as on the Sacramento bottom lands, and those there who are fortunate enough to have in a few acres feel jubilant over the outlook.... Peter Smith has greatly improved his farm in Happy Valley by adding several acres more of fine fruit trees and fencing a considerable portion of the land rabbit-tight.... W. D. Nicholson has planted three rows of black walnut trees, reaching from his residence to the east end of Ferry street.... The Shasta County Stock Fruit Co.'s orchard now contains a little more than 13,000 trees of different varieties. Seven thousand of these were planted this spring. Stephen Friebe, who is managing this farm, says that less than one per cent of the 6000 trees planted last spring were lost. This orchard now contains 190 acres, 69 trees to the acre.

Solano.

A BOLD COYOTE.—*Vacaville Reporter*, March 7: Tuesday morning a large coyote attacked one of Henry Peters' men in his vineyard above town. The man beat the animal off with a shovel, and by a fortunate stroke killed it before any injury was inflicted upon him.

Sonoma.

CITRUS FRUITS.—*Index-Tribune*: Sonoma valley is coming into prominence as a producer of oranges and lemons. At present this valley is supplying the markets of Santa Rosa and Petaluma, while S. F. dealers stand ready and willing to take what is left. The most noted orange and lemon groves in this section are those of C. C. Carriger, Gen. Vallejo and Col. G. F. Hooper. The last-named gentleman has laid on our table some exceptionally fine samples of this fruit grown on his farm near Sonoma. One variety of orange, of palatable flavor, neither too sweet nor too tart, is quite small, but owing to its very thin skin is almost as large after peeling as the largest of the thick-skinned. [Specimens of this orange, given us at our recent visit, resembled the Paper-Rind St. Michael outwardly, but gave internal evidence of being the product of a seedling tree.—EDS. PRESS]

POULTRY AT CLOVERDALE.—*Reveille*, March 9: We paid a visit to the Cloverdale poultry-yards on Wednesday last, and were really edified on the subject of "hen culture." The proprietor, W. B. Taylor, starting two years ago with a trio of White Leghorns as an experiment, succeeded so well that last season he added to his outfit other breeds until he has now five yards of fine poultry. The first pen shown us were Black Leghorns, most beautiful fowl, and the eggs were as large if not larger than eggs obtained from the large Asiatic breeds, and we were assured that they are very hardy and easily raised. Pen No. 2 is a flock of large half-breed Wyandottes from selected fowls, mated to a fine cockerel of the same breed, and for size and beauty of plumage (mostly a golden tint) we can safely say that nothing finer can be found in this section. Nothing is claimed for this pen, more than size, egg-producing qualities and a strain of one of the most popular breeds in the country. In Pen 3 we found (had it not been for what was yet in store for us) as pretty a lot of fowls as our eyes ever gazed upon—White Leghorns. Pen 4 was a revelation. We had often read of Silver-Laced Wyandottes, but had never before seen a flock of them together. Their uniform plumage—dark, with silver penciling, so evenly laced that each hen seemed to be a duplicate of the other, certainly presented to our eye the acme of perfection. They are good layers of rich yellow eggs, and judging from their great popularity among fanciers, are the best "general purpose" breed in the market. No. 5 is a pen of mixed poultry, White and

Brown Leghorns predominating, presided over and thoroughly looked after by a Rose-Comb White Leghorn obtained from the East last season. These, as well as the second pen described, are not thoroughbreds, but crosses made for best results.

Tulare.

HARE SLAUGHTER.—*Traver Advocate*, March 2: The jackrabbits which make this vicinity their rendezvous have been having a hard time of late. Last week about 7500 met their doom. The results of the drives on different days last week were as follows, as near as can be estimated: Sunday, 1000; Tuesday, 2700; Friday, 800; Saturday, 3000. Most of these were caught at the drives west of Traver. This week the seat of war has been changed to the east side of the railroad track, and a big drive was made on Tuesday to a corral located near Mr. Vannoy's place. The farmers east of here have banded together and purchased about a mile of wire netting, the height of the netting for the wings being 2½ feet and of the corral six feet. Several drives were given this week and another big one takes place to-day. When it is considered that besides the 7500 a week being killed in this vicinity every third rabbit is with young, the great good done by these drives can be realized.

MORE HONEY.—*Tulare Register*, March 8: J. F. Faust is going into the bee business rather extensively. He has now 120 stands, and will establish his apiary at or near the farm of J. W. Shaklee. Mr. Faust has been looking through the Lucerne valley for an opportunity to purchase bees, and succeeded in finding a number of hives. He says the market for honey is quite good and the business is one that is very suitable to him at his time of life, as it does not require active labor.

Ventura.

VENTURA JOTTINGS.—*Free Press*, March 8: There are on exhibition at the office of E. S. Hall two white Belgian carrots raised on the place of Mr. Morrison, on the avenue, one of which weighs 14 and the other 1½ pounds. The larger one measures 24½ inches around at the crown and is now 23½ inches in length, and a portion of it is still in the ground.... Jim Evans has a Poland-China hog which weighs 900 pounds, and is still growing.... An artesian well has just been completed at Simiopolis, on the Simi rancho, which is only 85 feet deep and produces a flow of water which will rise 15 feet above the surface in a seven-inch tube. It now rises six or seven inches above the casing and flows in a strong stream.

Yuba.

MOUNTAIN RANCHES.—*K. J. Russom in Appeal*: We are at 2800 feet altitude, on the southeast slope of the north fork of the Yuba river, and as we have fig trees bearing, orange and pomegranate trees growing nicely, I feel that we are in the citrus belt. As we are just inside the snow belt we have a little winter, just enough to be pleasant, and are much cooler in summer than lower down. Water is pure and cold during the hottest days of July or August. The lowest temperature during the winter months is about 19°. We raise apples and peaches in abundance; berries of all kinds, and grapes as fine as can be found in the State. We picked blackberries and raspberries in January, and have strawberries now in bloom, vegetables growing nicely in the garden, and roses bloom every month in the year. This part of the county is little known, but it is settling up, there being quite a number of locations within the last 12 months. There are a great many acres of vacant land in the mountains, where a free water right could be obtained by settlers. We raise fine wheat, oats and barley without irrigating, and alfalfa with very little water. All that is necessary to open up a fine fruit and agricultural country is an outlet for our productions.

SHADE-TREES FREE.—J. T. Bogue, the nurseryman, has noticed that many of the yards surrounding the schoolhouses in Sutter county are not ornamented with trees in and around the children's playgrounds, and he therefore proposes to furnish without cost to every school district in Sutter county the following young trees: 50 black walnut, 2 black fig and 2 Monterey cypress. The only condition attached to this offer is that the trustees of each district must agree to plant them at once, after properly preparing the ground, and thereafter care for them. He also says that to every church in Sutter county he will present the same number of trees on the same conditions. The trees are now ready for delivery to the trustees.

ARIZONA.

FROM THE RANGES.—*Prescott Hoof and Horn*, March 7: Mitchell Burch and D. W. Strahan, leading cattlemen of the Mogollons, were in the city on Tuesday. They say that a great number of beef cattle will be shipped from the Verde this spring. Cattle have wintered unusually well, there being no loss whatever in that locality. The condition of the range, Mr. Burch says, is excellent, and the new grass will soon be in abundance to brace up the few old and weak cattle which always suffer more or less at this season of the year.... W. G. Shook of Juniper says grass is a little short in the vicinity of Walnut Creek, but believes cattle have held their own, and anticipates no appreciable losses. He states that there have been large sales of cattle from his locality.

McAFEE & BALDWIN,

REAL ESTATE AGENTS AND AUCTIONEERS,

10 MONTGOMERY STREET, SAN FRANCISCO.

AT AUCTION!

THURSDAY, FRIDAY AND SATURDAY,

MARCH 21st, 22d AND 23d, 1889, AT 2:30 P. M.

BY ORDER OF J. B. HAGGIN, ESO.

We will sell peremptorily, without limit or reserve, on THURSDAY, FRIDAY and SATURDAY, MARCH 21st, 22d and 23d, 1889, at the hour named, in the city of

BAKERSFIELD,

KERN COUNTY, CAL.

IN SUBDIVISIONS OF 10, 20, AND 40 ACRES EACH, ABOUT
7000 ACRES

OF FRUIT, VEGETABLE AND ALFALFA LAND, WITHIN ONE TO SEVEN MILES FROM BAKERSFIELD, BEING PORTION OF THE

HOP RANCH, COTTON RANCH, JEWETT RANCH,
AND OTHER RANCHES,

ALSO, CHOICE RESIDENCE AND BUSINESS SITES IN BAKERSFIELD.

This is the initial offering, and the commencement of the subdivision of the large possessions of Mr. J. B. HAGGIN, in Kern County. The property embraced in it includes some of the finest lands in the county, as all well-informed residents of BAKERSFIELD will testify. About 2500 acres of the land offered is in alfalfa, and can be rented or otherwise utilized to yield a large income and a high percentage upon a valuation of from \$150 to \$200 per acre. Other portions of the offering are used for vegetable and garden purposes, while the balance is composed of land rich and fertile, awaiting only the industrious settler to demonstrate its great adaptability to fruits and the products of this wonderfully prolific soil. A large portion of these lands lie along and adjacent to UNION AVENUE, which as at present dedicated extends from Kern river south through BAKERSFIELD, a distance of ten miles, and which is one hundred and fifteen and one-half feet in width. The other tracts are reached by excellent county roads leading direct to BAKERSFIELD.

WATER FOR IRRIGATION.

The lands to be sold are amply supplied with water for irrigation, from the Kern Island Canal, at rates now the lowest in the State, and fixed and regulated by the County Board of Supervisors.

UNUSUALLY LIBERAL TERMS.

TERMS OF SALE: Only one-fourth Cash. Balance in 1, 2, and 3 years, with interest at the rate of seven per cent per annum. TITLE PERFECT.

SPECIAL EXCURSIONS.

To enable all to participate in this important event, we have made arrangements with the Railroad Company by which we are enabled to offer special round-trip rates from all points to BAKERSFIELD, between SAN FRANCISCO, SACRAMENTO, SAN JOSE, STOCKTON and LOS ANGELES, as follows: SAN FRANCISCO, SACRAMENTO, STOCKTON, SAN JOSE, and all intermediate points, to Bakersfield and return,

\$9.50 ROUND TRIP TICKETS ONLY **\$9.50**

\$9.50 ROUND TRIP TICKETS ONLY **\$9.50**

AND CORRESPONDING RATES FROM ALL POINTS BETWEEN LATHROP AND BAKERSFIELD.

From Los Angeles to Bakersfield **\$5.50** ROUND TRIP TICKETS ONLY **\$5.50**

And corresponding rates from all points between Los Angeles and Bakersfield.

TIME TABLE.

Tickets will be good on trains leaving San Francisco March 20th and 21st, at nine o'clock P. M. and on March 21st, at half-past eight o'clock A. M., and on trains from Sacramento, Stockton and San Jose connecting therewith; and from Los Angeles on train leaving March 20th, at half-past ten o'clock P. M.
RETURNING, tickets will be good on all regular trains, leaving Bakersfield March 22d, 23d, 24th and 25th, 1889.

GRAND BARBECUE.

Vehicles will be at hand to convey excursionists over the property to be sold, starting at half-past ten o'clock A. M. of each day. On Thursday, March 21st, there will be a Grand Barbecue, at about one o'clock P. M., in the Grove at Bakersfield, to which all will be welcome. Railroad Tickets will be on sale at the offices of the Company, and at the office of McAFEE & BALDWIN, 10 Montgomery street, San Francisco, where sleeping-car accommodations can also be arranged for. Maps and diagrams will be ready for distribution in due time. For further particulars, apply to

Bakersfield and Kern County Attractions.

A Desert Converted Into Fruitful Farms by Irrigation.

[By R. M. E.]

Many eyes are now turned to Kern county, in the extreme southern portion of the San Joaquin valley, the southern part of Central California, where 1,250,000 acres of fertile land await the settler. For years the development of this splendid county has been checked because the parties holding the land would not sell. Now the fiat has gone forth to put the property on the market, and colonists are rushing in to get the lands before they are all purchased. A fine system of irrigating ditches is supplied from Kern, Buena Vista, Tulare and Goose lakes. In addition to these abundant sources of water supply, artesian water is obtained at a depth of about 200 feet, and it is so plentiful that one well waters a section of land, while, if stored in reservoirs, it will cover 3500 acres, as the average flow of a dozen wells for 24 hours was over 1,000,000 gallons each, and since the temperature of these wells is 71° F., they are invaluable for winter irrigation. The highest mountain in the United States, Mt. Whitney, 15,056 feet, together with other lofty peaks, sheds its melting snows into the Kern valley, but the waters of the Kern river alone are capable of irrigating all the valley, if properly stored and preserved. The cost of irrigating in Kern is from two to ten cents per acre, and there are more than 30 canals to furnish the water.

Progress.

Formerly this land was regarded as malarial, but since the irrigating ditches have liberated the stagnant pools of the swamps and sloughs and the people have substituted artesian for surface water, the malaria is said to have disappeared. About 15 years ago, outside of Bakersfield, the county seat, there were not a dozen families and the valley was considered barren, but this land was waiting for water. The debris of the mountains contains the elements of tree and plant life, and water transforms it like the touch of a fairy's wand. The mountains in that vicinity are composed of friable granite constantly disintegrating, and the river flows over gypsum beds which are worn away and deposited on the sands. The total value of all county property last year was \$8,990,521, or a gain in one year of \$2,649,582.

Products.

Alfalfa is the staple crop. The rich fields of this valuable forage plant yield from eight to ten tons per acre annually, besides furnishing some pasturage. Wheat and barley thrive. The products of this county include cotton and sweet potatoes, melons and delicious fruits of which the grapes in our cut on page 249 of this issue are a fair sample. This is a mammoth variety of the Black Hamburg and is taken from a photograph of a vine in Bakersfield, whose immense clusters give but an imperfect idea of the fertility of this region. Corn, planted in rotation with wheat or barley, and as late as July, yields 60 bushels to the acre, but if planted in April, twice that quantity. Here are grown citrus, nut-bearing and deciduous fruits. When six years old the pecan bears in Kern, which is something remarkable, oranges flourish and it is an Eden for flowers, over 200 varieties of the rose alone being grown there. Chestnuts, prunes, quinces, small fruits, pomegranates, apples, pears, apricots, plums, nectarines, walnuts, butternuts, mulberries, figs, persimmons and olives, together with grain and vegetables, afford a variety of foods to the settler, while an abundance of forest trees provide a cheap fuel. Dairying is an important industry and the county is regarded as one of the best for poultry, the products being rapidly disposed of in San Francisco and Los Angeles. The alluvial soil with a sprinkling of alkali is excellent for beets. Mangel-wurzel on the Lakeside ranch stood 2½ feet above ground and averaged one ton in weight to 100.

The Chief Town.

In Bakersfield with five hotels and three churches, six general stores, ten fraternal societies, with an assurance of a Grange of the P. of H., which will make eleven, four dry-goods stores, four variety, two book stores, etc., etc. One hotel, the Southern, will cost \$1,000,000; the Masonic temple cost \$30,000; water-works and a first-class fire department make this an attractive residence spot. Sumner, connected by a car line with business center, only one-half mile distant, may be reckoned as virtually the same town. Delano, 32 miles west, on the S. P. R. R., and about the same distance from Tulare, has a good future. Other stations and settlements offer special advantages, but we lack the space to describe them. Suffice it to say there are 39 school districts, and the examinations are so rigorous that only about 20 per cent of the teachers can pass and obtain their certificates. In addition to the above-named advantages, this county is notably rich in gold and silver, copper, fire-brick clay, limestone, marble, petroleum, building and lithographic stones, and evidences have been found of the existence of iron, coal and quicksilver.

A HANDY TREE-PROTECTOR.—One great recommendation of the Excelsior fruit-tree protector is the rapidity with which it can be fitted and secured to the tree. See Bonestell & Co.'s advertisement, with cut, on another page of this paper.

Vacaville Letter.

EDITORS PRESS:—We have had rain by spells for the last four days and it is still showering. Over one inch of water has fallen. Everything green is growing fast. The weather is quite warm, the mercury standing at 62° to-day.

In some of the cherry orchards where the yield has been light the past three years the owners have placed a lot of bees, hoping that they will fertilize the blossoms and help produce a crop.

Last Friday night it rained half an inch, with thunder and lightning. A party of boys who went fishing to Cache slough, 20 miles east of Vacaville, were very much pitted on account of being out in the rain; but they say it did not rain at all there, though it was raining there yesterday. The boys caught 300 catfish, which we country folks consider very good eating, as we seldom see any other kind.

The grain on the plains between Elmira and Cache slough is said to be very good. Nearly everybody here is doing pruning and many have their orchards plowed.

The prospect for large profits on the next fruit crop is not very bright. Those who ought to be best able to guess what the prices will be are very loth to risk an opinion. It will depend mostly on the fruit crop East; a large crop there means small profits to the California fruit-grower after he pays the railroad charges.

Several parties here have been painting their trees with turpentine to kill the scale. This is a dead shot on the scale, none being found alive on the trees one day after they were painted. It might be as well to mention that the turpentine is about as sure to kill the trees as the bugs.

Vacaville, March 11, 1889

FRAUDULENT LAND SCHIMES.—Referring to the victims of certain real-estate frauds, the Fresno Republican says: There is a State Board of Trade in San Francisco that is in direct communication with the county boards of trade all over the State, and all home-seekers have to do is to call there and express a desire for information concerning any of the various sections of country and it will be cheerfully furnished them. Besides, there are numberless real-estate agencies of known reputation where strangers can buy with perfect safety. Every safeguard possible has been thrown around the home-seeker coming to California, but there are some people who will climb over a fence 20 feet high, swim a rapid creek and walk a mile through a bog in order to get into the clutches of a swindler.

TREATMENT OF THE MYSTERIOUS VINE DISEASE.—It is an interesting fact that those now engaged in investigating the mysterious vine disease at San Gabriel are making a very large application of the Ongerth insecticide powder. We hear that the experiments being made by Prof. Dowlen, under the supervision of J. De Barth Shorb, have led to a tentative conclusion very flattering to the efficacy of the powder, and that 15,000 pounds of the powder have just been shipped to San Gabriel on orders, for the purpose of making a wide application. Surely the presumption is strongly in favor of a material when so large an order is made for it.

Our Agents.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, term of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

RAPID GROWTH.—P. H. Murphy, the well-known Perkins, Sacramento Co. breeder, writes us that he has sold two of the Shorthorn bulls he advertised in the Rural, and therefore reduces the number of animals in his advertisement. One of the bulls, after walking six miles, weighed 1785 pounds, and as his age is 28 months and three days, his average daily gain has been more than two pounds—all without extra feeding. Mr. Murphy wants to know what other breed of cattle can make so good a showing.

IN SOUTHERN HUMBOLDT, a correspondent says, the sentiment is crystallizing in favor of dividing large stock ranches and selling the lands to small farmers, gardeners and fruit-growers.

THE Los Gatos Cannery packed over 50,000 cases of fruit last year. The company is making arrangements to put up more than that the coming season.

WELLS, RICHARDSON & Co's

IMPROVED Butter Color.

EXCELS IN STRENGTH PURITY BRIGHTNESS

Always gives a bright natural color, never turns rancid. Will not color the Buttermilk. Used by thousands of the best Creameries and Dairies. FIRST GUN FOR 1889.

RED, WHITE and BLUE MOWER.

Manufactured Specially for the Pacific Coast.

THE BEST MOWER IN THE WORLD.

ADVANTAGES:

Gearing Covered from Dust.

Brass Boxes for Bearings.

Floating and Rocking Cutter-Bar.

Light and Direct Draft.

Steel Plate on Shoe under Scythe Head.

Cutter-Bar Carried on Wheels.

Steel Used Largely in Place of Iron.

Frame for Pole and Seat independent of gear frame, making it very easy on horses and driver. No jar or vibration on seat or pole. Wheels are high and have wide face—it has wide tread, the draft is direct from frame and does not pull down on pole or lift the wheels from the ground, thereby giving great cutting power, and at same time very light weight and draft. Scythe works against adjustable steel holders and does not wear on the cutter-bar—a great advantage over others.

THE BEST MOWER ON EARTH.

For 1889 the "RED, WHITE and BLUE" will be made for us to suit the requirements of the Pacific Coast trade, and will be, without an exception, the very best Mower in the market.

Dealers cannot afford to be without it. Be sure and see us before contracting for your Mowers for 1889. A train load has been received by us. SEND FOR CATALOGUE.

Lands For Sale and To Let.

200 FRUIT FARMS FOR SALE.

Lands of all sizes, from five acres up, IMPROVED and UNIMPROVED, at all the best points and in the best FRUIT-GROWING COLONIES in the State, on EASY TERMS.

Special Agent for the NOVATO and MERCED FRUIT-GROWING COLONIES. Address: D. B. WIER, 40 California St., San Francisco.

FARMING and GRAZING LANDS.

5530 Acres; one of the finest ranches in Berryessa Valley, Napa county; a splendid stock farm, with several hundred acres choice fruit land; 300 acres now in grain; plenty of running water; commodious barns, stables, etc.; this property must be sold immediately, and is one of the best investments ever offered in this State; \$8 per acre.

Stock Ranch in Lyon county, Nevada; 5300 acres; title perfect; 400 acres in alfalfa; unlimited supply of water; will be sold with the place—555 head of stock cattle, 60 head horses, 750 tons alfalfa hay and a full line of farming utensils; this is a rare bargain.

10,000 acres on railroad in Colusa county; 3200 acres now in wheat; all level land.

640 acres, 2 miles from Germantown, in Colusa county. Two farms in Sutter county, one of 240 acres and one of 160 acres.

1440 acres in Placer county; all level.

214 acres 1 1/2 miles from Calistoga.

800 acres in Yuba county; \$10 per acre.

1040 acres in Placer county, 8 miles from Newcastle; well improved with fencing and buildings; 200 acres cleared; \$8 25 per acre.

5000 acres in Antelope Valley, Colusa county; 1200 acres cultivated; balance rolling; \$7 per acre; a splendid bargain.

Two bearing Orchards and Vineyards in Sutter county, near Yuba City; 80 acres each; trees 4 and 5 years old; fruit of approved varieties; these are particularly good bargains, and will be sold very low, one-half cash, balance on time, if desired, at reasonable interest.

16,500 acres in Contra Costa county.

670 acres 2 miles from Sonoma.

S. J. STABLER, Flood Building, 309 Market St., room 1.

Agricultural and Grazing LANDS FOR SALE.

7975 Acres of fine grazing and agricultural land, including 4000 head of fine grade stock sheep; abundance of water; 9 miles from Merced City, and near Merced River; price, \$7.25 per acre; 1000 acres good wheat land. Address

624 Market Street, San Francisco, Cal.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 160 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

LANG, MERRITT & DEXTER, Real Estate Brokers.

A LONG LIST OF

Choice Fruit, Farming, Grazing and Colony Tracts.

Address, SALINAS CITY or CASTROVILLE, MONTEREY CO., CAL.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the Artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied for soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

The American Well Works
AURORA, ILL.
U. S. A.

A Standard-Bred Stallion.

(Continued from page 241)

makes him a very taking horse to even the casual observer. Homer's dam was that famous old mare Sally Chorister, who produced, besides Homer, Proteine, 2:18; Belle Brasfield, 2:20; Admiration (trial 2:26), and Belle Patchen, 2:30. Two of these have followed in their dam's footsteps and have produced trotters. Belle Brasfield is the dam of Holstein, 2:29, and Belle Patchen is the dam of that great racehorse, Baron Wilkes, 2:18, whose performances have, to a certain extent, brought Homer before the public, as his dam, Belle Patchen, is an own sister to him. His breeding as a broodmare sire, as will be seen, is simply perfect, as he is by the greatest broodmare sire of the generation and out of the greatest broodmare his sire ever covered.

Campaign also strikes a splendid line through Blackwood, sire of his second dam. Blackwood's record was 2:31. He was by Alexander's Norman, sire of Lula, 2:15; May Queen, 2:20, and the dams of Norman Medium 2:20, Fanny Robinson, 2:20, etc. Still further back, through his third dam, Campaign partakes of another royal strain, the famous Alexander's Abdallah (sire of Goldsmith Maid, 2:14), by Rysdyk's Hambletonian.

Having such blood to deal with, it is little wonder that Messrs. Shippee and Parker are turning out youngsters which strike the popular mind just at this time of intense activity in well-bred trotting horses. The horse now known as Campbell's Electioneer, whose sale to W. E. Campbell of Kansas for \$7000 was noted in the Rural of Feb. 23d, has, we are told, won a bid at the East far in advance of his purchase price in California.

California Products at Chicago.

CHICAGO, March 13.—Florida oranges were reported as in only moderate supply and in very good request for choice fruit, and quoted firm. California are still slow, except for fine Riverside or fine Washington Navel. Messina oranges are coming in and rule rather slow. California Riverside, 1/2 box, 176 in box, \$3.25; California Riverside, 1/2 box, 126 to 150 in box, \$2.75; California, San Gabriel, 1/2 box, \$2.50; California Navel, 1/2 box, \$3.50; 3-75; California Navel, (Washington) 1/2 box, \$4.50 @5.

Aside from there being some speculative demand for choice, unpeeled peaches in sacks, with now-and-then sales, the market rules very quiet and usually slow.

California Dried Fruits.—Apricots are quoted plenty and dullness reported. Quotable;

Apricots—Evaporated, bleached, bxs, 1/2 lb, 10@12; do, sun-dried, according to quality, 4@8c. Peaches—Evaporated, bleached, unpeeled, bxs, 7@8 1/2c; do, sun-dried, bleached, unpeeled, sks, 6@7c; do, sun-dried, unbleached, unpeeled, sks, 4@5c; do, sun-dried, peeled, bxs, 10@12 1/2c; do, do, sks, 10@10 1/2c; do, evaporated, peeled, bxs, 12@13c. Nectarines—White, evaporated, bleached, bxs, 7@8c; do, sun-dried, bleached, sks, 6@7c; do, red, evaporated, bichd, bxs, 6c; do, red, sun-dried, bichd, sks, 4@5c. Plums—New, pitted, 7 1/2@8c; new, unpitted, 4@7c. Prunes, according to size, in sks, 5@9c; do, Silver, 10@12c; do, Hungarian, sks, 3@5c.

Hops sell at late quotations and meet with good demand, while at the same time stocks are very moderate and receipts are light. Current prices: Washington Territory, best, 24c; good to prime Pacific Coast, 20@22c; fair to good, do, 18@20c.

Jute at San Quentin.

In Warden McComb's monthly report to the prison directors at their meeting at San Quentin on the 12th inst. he says: "No attempt has been made to open the season for the sale of grain bags, as the Legislature has several bills under consideration which may interfere with the plan adopted last year. As soon as the matter is definitely settled, circulars will be sent to the grain-growers, giving terms and conditions."

The board approved two contracts with Messrs. Lichtenberg for jute—one for 2000 bales at four cents a pound and 1000 bales at a fraction over four cents. The contract price includes freight, insurance and duty.

ALLEGED ILLEGAL FENCING IN MODOC.—In regard to the alleged unlawful inclosing of some 35,000 acres of Government land in Modoc county by Jesse D. Carr, District Attorney Carey (to whom the case was referred by the Department of Justice) has requested the special agent of the Interior Department, who investigated the case and ordered Carr to remove all fences which inclosed public land, to make the necessary affidavits in order that he might institute civil suit against Carr. Mr. Carey also says in his report to the Department of Justice that if there are gateways provided in the fences and no person has been prevented from entering the lands for the purpose of making settlement, with a view to enter the same in the land office, and no person has been prevented from free passage upon the land, then criminal proceedings will not obtain.

THE IMPORTANT SHORTHORN SALES to be held by Killip & Co., at Baden Farm, on the 28th and at San Mateo Rancho on the 29th, must not be overlooked by our readers. See advertisement elsewhere in this issue.

THE farmers of Sand Creek, Tulare county, tried to get up a rabbit-drive recently, but the affair was a failure. Only six rodents were rounded up in 1800 acres.

List of U.S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING FEB. 26, 1889.

- 398,367.—AUTOMATIC FOG-HORN—A. F. Baatz, Bellingham, W. T.
- 398,578.—ANIMAL-RELEASING DEVICE—A. R. Brann, S. F.
- 398,499.—KEY—J. P. Dandmand, Virginia, Nev.
- 398,711.—HARVESTER—Jabez Draper, Stockton, Cal.
- 398,773.—WHEELBARROW—John Dupuy, S. F.
- 398,387.—BEE-HIVE—J. I. Fort, San Diego, Cal.
- 398,728.—SAFETY-ATTACHMENT FOR ELEVATORS—H. O. Hooper, S. F.
- 398,406.—AMALGAMATOR—W. & G. W. Johnson, Portland, Ogn.
- 398,785.—HOISTING APPARATUS—H. Kennedy, S. F.
- 398,739.—FRUIT-BOX—J. G. Lettelier, Los Angeles, Cal.
- 398,648.—PLOW—James & William Paterson, Stockton, Cal.
- 398,798.—GATE—W. O. Pierce, Sacramento, Cal.
- 398,461.—STEAM OR WATER PACKING—J. T. Smith, S. F.
- 398,464.—NIPPERS—J. Sponseller, Ft. Apache, A. T.
- 398,682.—HAY-LOADER—W. M. White, Tacoma, W. T.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

CHOICE CUTLERY BY MAIL.—We have received from Alling & Lodge, cutlery merchants of Madison, Indiana, a nice little catalogue of various shears, scissors and clippers, pruning, pocket and table knives, plated forks, spoons, etc., which they are sending by mail, postage prepaid. The different patterns of goods are well and clearly illustrated, the prices of each variety distinctly stated, and the catalogue may be had, we presume, by any of our readers who will write for it to Messrs. A. & L. at the post-office named above.

PLEASANT VALLEY FRUIT NURSERY.—John S. Colli s of Moorestown, Burlington Co., N. J., a name long known to Rural readers, sends us his spring catalogue and wholesale price-list to which are prefixed "some questions and answers on fruits." The modest garb in which it comes might lead one to infer that to promote his business interests, Mr. Moore trusts less in gaudily-printed covers and more in the intrinsic worth of the trees and plants which he ships to patrons.

AN INNOVATION.—At the brilliant reception given by Gov. Waterman to the members of the Legislature on the evening of Feb. 27th, no wines, punches or other intoxicating drinks were offered to the guests, but in the center of the front parlor there was set an immense bowl in the form of a well, from which was dispensed ice cold lemonade. The bowl was hidden in banks of violets.

FOREIGN IMMIGRANTS.—The forty-second annual report of the Board of Emigration Commissioners shows that during the year 1888 the total number of passengers from all foreign ports landed in Castle Garden was 370,822—237,856 males and 132,966 females. The nationalities chiefly represented were: Irish, 44,300; English, 38,355; German, 78,145; Russian, 33,052; Swedish, 37,934; Italian, 43,927

LEGAL TENDER.—A passenger on a street car in this city tendered in payment of his fare a three-cent piece and two cents, all United States coins. The conductor refused to receive the money and the passenger was forcibly ejected. The conductor was altogether too hasty in his action, as the evicted individual has brought suit for \$5000 damages.

AN INCUBATOR APPROVED.—Fanny Field, poultry editor of the *Prairie Farmer*, strongly indorses the improved Excelsior incubator advertised in this journal by Geo. H. Stahl of Quincy, Ill.

LUTHER BURBANK of Santa Rosa has some Japanese chestnut trees in his garden that yield fruit. one dozen of which weigh a pound.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

THE GUIDE TO HORTICULTURE, published by the J. T. Lovett Co., Little Silver, N. J., is one of the finest catalogues of nursery products we have ever seen. In the matter of illustrations, cover and colored plates it is unique, chaste and refined. It contains a complete list of Fruit and Ornamental Trees, Shrubs, Vines and Creepers, Hedge and Herbaceous Plants, etc., fully described and illustrated, with botanical as well as common names. This book, of more than temporary value, is sent with colored plates for 10c., or without plates free.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 28.—What Every One Should Know; a cyclopedia of valuable information; 510 pp.; cloth; (full price \$1).50
- 29.—Knitting and Crochet; by Jennie June; 144 pp., 200 illustrations.25
- 30.—Needle Work, by Jennie June; 12 pp., 200 illustrations.25
- 31.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations.25
- 32.—The Way to do Magic; illustrated, 60 pp. 10
- 33.—The Taxidermist's Manual; illustrated, 64 pp. . . 10
- 34.—A Dictionary of American Politics; comprising accounts of political parties, measures and men, and explanations of the Constitution, divisions and practical workings of the Government, together with political phrases, familiar names of persons and places, noteworthy sayings, etc., by Everitt Brown and Albert Strauss. (Full price \$1.). . .50

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F.

In writing correspondence, items of information, or on other business, please use a separate sheet. Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired. Inform your neighbors about our offers and paper.

POISONOUS TICKETS.—In order to preserve its tickets from mutilation by mice or rats while in the cases, the A. & P. R. R. is now using ticket-paper prepared with arsenic. Passengers who are in the habit of chewing their railroad tickets are cautioned to discontinue the practice.

A FLOCK of wild geese settled on a 40 acre wheat field near Willows, one day last week, and picked it clean in two hours.

FRENCH & LINFORTH,
SOLE AGENTS,

No. 35 Beale Street, - - - - San Francisco, Cal,

Dewey & Co.'s Scientific Press
Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

Picturesque Californian Homes.

Vols. 1 and 2, each containing 40 plates, plans, details and specifications of houses—City and Country Homes—costing from \$700 to \$15,000, and adapted to families having good taste and moderate means.

This work is designed to meet the wants of that large number of persons who have but a limited amount of money at their command, and in building a home wish to use it to the best advantage. Drawn by Samuel and Joseph C. Newson, Architects, San Francisco, who have taken much pains in its preparation, and confidently assert that mechanics, clerks, salaried men, workmen of every calling contemplating building, carpenters and builders in cities, towns and villages, will find this book a useful aid, worth many times its cost in the information and practical suggestions which it gives.

The Plans are clear, and finely drawn on Lithograph Plates, and handsomely printed; size, 9x13 inches.

Subscribers to this paper (old or new), who pay one year in advance of the date of application for this premium, can have the same by paying 50 cents additional for Vol. 1 (bound in paper), or 75 cents for Vol. 2 (bound in cloth). Sent by express unpaid, or on receipt of 60 or 80 cents, postpaid.

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for \$3 per volume of six months. Per year (two volumes) \$5. Inserted in Dewey's patent binder, 50 cents additional per volume.

Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

Sired by Luck's All 189; he by Luck's All 188, by Cardinal 47; he by Emulator 103.

First dam Daisy by Luck's All 188.

Second dam by Providence 24; he by Master George 263, by King George 180; he by King George IV 163.

Napoleon is a fine, rich bay with black legs, a d very superior action. He is very deep in the girth and has wonderful style. He took the premium at London, England, and also Silver Medal where he was shown against horses of all ages. He also took first premium at Middleton in Teedale, and second premium at Bowes, Knealand, in 1885; first premium at Illinois State Fair and first at Fat Stock Show at Chicago, 1887.

TERM 3, \$25 for the season.

The Standard Bred and Cleveland Bay Stallions

Will serve Mares the present season, commencing Feb. 1st and ending Sept. 1, 1889, at Cook Farm, Danville, Contra Costa County. All bills payable before the animal is removed. Mares not proving in foal will have the privilege of return the following season, providing the same parties who bred the Mares still own them, and the Stallions are still owned by the Cook Stock Farm.

PASTURAGE, \$4 per month; Hay and Grain, \$10. Best care taken, but no liability assumed for accidents or escapes.

Mares sent to Fashion Stables, Oakland, Bennett's Stables, Martinez, or to Geary & Grindie's Stables, Haywards, will be forwarded to Farm free of charge.

Address:

COOK STOCK FARM,
DANVILLE, CAL.

S. H. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 13, 1889.

Rains, the past week, interrupted to some extent trade in this city, but this was counterbalanced by its imparting a more hopeful feeling regarding crop prospects. The only drawback to the general expression of confidence was the report of many localities in some of the central valleys in the central and southern counties either not having been visited by rains this storm, or else the rainfall was light, to-day's telegrams report heavy rains in these sections. Persons claiming to be weather prophets are confident that the storm is not over yet, and that all sections of the State will be visited by good rainfalls before a final clearing up. In the absence of general trading and more selling pressure, prices of farm products have drifted lower, particularly for wheat. The shrinkage in the latter was also influenced by falling markets at the East and abroad. The following is to-day's cable:

LIVERPOOL, March 13. — Wheat—Depressed. California spot lots, 75 5d @ 7s 8d; off coast, 37s 6d @ 37s 9d; just shipped, 37s 9d; nearly due, 37s 9d; cargoes off coast, nothing offering; on passage, very inactive; Mark Lane wheat, weaker; English country markets, slow, French, dull; wheat and flour in Paris, slow; weather in England, mild.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	Apr.	May.	June.	July.	Aug.
Thursday	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2
Friday	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2
Saturday	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2
Monday	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2
Tuesday	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2	78s 1/2

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday	38s 1/2	38s 1/2	38s 1/2	Quiet.
Friday	38s 1/2	38s 1/2	38s 1/2	Inactive.
Saturday	38s 1/2	38s 1/2	38s 1/2	Inactive.
Monday	38s 1/2	38s 1/2	38s 1/2	Slow.
Tuesday	38s 1/2	38s 1/2	38s 1/2	Very dull.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	Mar.	Apr.	May.	June.
Thursday	96 1/2	97 1/2	98 1/2	98 1/2
Friday	96 1/2	97 1/2	98 1/2	98 1/2
Saturday	96 1/2	97 1/2	98 1/2	98 1/2
Monday	96 1/2	97 1/2	98 1/2	98 1/2
Tuesday	96 1/2	97 1/2	98 1/2	98 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	Mar.	Apr.	May.	July.
Thursday	100 1/2	102 1/2	103 1/2	80 1/2
Friday	99 1/2	101 1/2	102 1/2	80 1/2
Saturday	99 1/2	101 1/2	102 1/2	80 1/2
Monday	99 1/2	101 1/2	102 1/2	80 1/2
Tuesday	99 1/2	101 1/2	102 1/2	80 1/2

NEW YORK, March 13. —Wheat—4 1/2c for cash, 9 1/2c for May, 9 1/2c for June and 9 1/2c for July.

CHICAGO, March 13. —Wheat—9 1/2c for May and 8 7/8c for July.

Foreign Grain Review.

LONDON, March 11. —The Mark Lane Express, in its review of the British grain trade during the past week, says: Values of English wheat advanced slowly during the first part of the week. Then milder weather caused a halt, and on most of the exchanges prices are inclined to recede. The supply of flour made from '87 wheat is becoming limited, and prices have advanced 6d. English and American flours made from '88 wheat were firm until Wednesday, since which day they have been quieter. California barley, hard and steady, although satisfactory in color, is only bought in the absence of the best. English and fine German and Danish grinding barley is steady at large ports. The large quantity offered elsewhere weakened prices. Oats are firm. Large arrivals of corn have modified prices; new American is quoted at 19s 6d; old, 20s 9d. At to-day's market English wheats were firmer; foreign, steady; flour, steady. Corn and feeding barley closed better.

Wheat and Corn Surplus.

WASHINGTON, March 11. —The statistical report of the Department of Agriculture for March relates to the distribution of wheat and corn. The amount of corn reported still on hand is 39.6 per cent. The surplus of merchantable average 82 per cent, which is less than in 1884, 1886 or 1887. The average price is less than in December. The March average for merchantable corn is 33.9 per cent per bushel; for unmerchantable, 22.8 per cent per bushel. The general average of Ohio, Indiana, Illinois, Iowa, Missouri, Kansas and Nebraska is 25.6 per cent per bushel.

The proportions of the wheat crop on hand March 1st are less than any year since 1880, except in 1882 and 1887. The actual quantity on hand is less than any recent year, except 1882 and 1886. It is estimated at about 112,000,000 measured bushels. The lowest State percentages are in the principal wheat-growing States, as follows: Ohio 27, Michigan 23, Indiana 24, Illinois 25, Wisconsin 28, Minnesota 26, Iowa 32, Missouri 27, Kansas 24, Nebraska 31, Dakota 24. In these States the quantities on hand are less than in March last by about 21,000,000 bushels.

Eastern Wool Market.

NEW YORK, March 8. —Bradstreet's says of the wool market: More inquiry for wool is reported by manufacturers this week in the principal markets. With this exception there is no change in the situation. Business is comparatively dull, and prices are in buyers' favor. From all accounts some of the larger consumers have pretty well run through their supplies. In the country what wool remains in first

hands is held very closely. Most mills at the West are said to have small supplies, and some of them may send East for wool. There is a rather free movement eastward from California. No more life appears in the woolen goods market, and there is little beyond a shortage of supplies to hold up quotations. At Philadelphia the market is unchanged, but if anything a little steadier for desirable lines of all kinds. Stocks are light.

BOSTON, March 8. —The only new feature to note in the wool market this week is a little more inquiry for choice fleeces, which have become quite scarce, and are held at extreme prices; in fact, stocks of nearly all kinds are much smaller than usual at this season of year, and buyers have to run around a good deal before finding lots to suit, but the general demand is still sluggish, and where offerings are not just what is wanted, slight concessions have to be made to close sales. Transactions in domestic wools foot up a little more than last week, but they have been in numerous small lots, and include a wide variety of grades. Total sales, 1,559,800 lbs.

Miscellaneous.

NEW YORK, March 9. —Dry hides are firm. There is a liberal and general supply, but not burdensome, as tanners have no surplus.

Raisins are still moving steadily. There is a good inquiry for prunes at 6 1/2 @ 9 1/2c. Nothing of moment in other dried fruit. Remnants of apricots are closing out well.

There is no marked activity in hops, but the market is sound. The demand runs to top grades, which are not plenty nor offered freely at current rates.

Local Markets.

BARLEY.

	Buyer Season.	Seller 1889.	Buyer 1889.
Thursday	82 1/2	81 1/2	92 1/2
Friday	82 1/2	81 1/2	92 1/2
Saturday	82 1/2	81 1/2	92 1/2
Monday	82 1/2	81 1/2	92 1/2
Tuesday	82 1/2	81 1/2	92 1/2

BAGS—The market for Calcuttas, influenced by improved crop prospects, is stronger, with the pool talking of a still higher range. They claim that the stock here is 25,000,000, and on the way 10,000,000; total, 35,000,000 bags. It is also said that contracts entered into at Calcutta for 12,000,000 bags or its equivalent in burlaps, for shipment, have nearly all been resold in that market, when crop prospects here looked gloomy. For spot, 7 1/4 @ 7 1/2c is asked, and for June-July, 7 1/4 @ 7 1/2c.

BARLEY—The market has drifted to still lower figures, but at the close there is a steadier tone. In futures trading has been light, the bears hardly venturing to sell freely at the low bids made. The following are to-day's Call Board sales:

Morning Session: Buyer 1889—200 tons, 89 1/2c. Buyer season—600 tons, 79c; 300, 79 1/2c. Spot, season's storage paid—100 tons, 77c @ ctt. Afternoon Session: Buyer 1889—100 tons, 89c; 800, 88 1/2c; 300, 88 1/2c. Buyer season—200 tons, 78 1/2c; 100, 78 1/2c @ ctt.

BUTTER—The rains having improved the pastures, the feeling among dealers for the immediate future is not of a cheerful character, notwithstanding the call is reported to be freer for both shipping and local.

CHEESE—The market is still heavy, with buyers not disposed to anticipate their wants.

EGGS—The consumption is steadily growing, causing a stronger tone. It is generally claimed that with improved roads in the country, receipts will be larger than ever before.

FLOUR—The market is barely steady. Some cutting in prices is reported.

WHEAT—The sample market has ruled in buyers' favor throughout the week. Owing to rains, exporters only took parcels obtainable at concessions on asking prices. At the close to-day the tone is firmer, owing to a slight improvement in futures at the East, and appearances indicating fair weather. In futures trading has been only fair, with slight fluctuations, and they gradually sinking, but at the close the feeling appears to be steadier. The following are today's Call Board sales:

Morning Session: Buyer 1889—1300 tons, \$1.43 1/2; 1100, \$1.43 1/2; 600, \$1.43 1/2. Seller 1889, new—100 tons, \$1.35 1/2. Buyer season—1600 tons, \$1.40 1/2; 100, \$1.40 1/2 @ ctt. Afternoon Session: Buyer 1889—200 tons, \$1.43 1/2; 100, \$1.43 1/2; 1400, \$1.43 1/2. Seller 1889, new—200 tons, \$1.35 1/2; 100, \$1.34 1/2. Seller 1889, old—100 tons, \$1.34 1/2. Buyer season—100 tons, \$1.40 1/2; 1200, \$1.40 1/2; 500, \$1.40 1/2 @ ctt.

[COMMUNICATED.]

Market Information.

Cereals.

Continued rains the past week contributed no little to allay fears regarding the crops. At this writing our advices warrant the assertion that without some unforeseen event, climatic, the wheat crop in this State will be the largest on record. This opinion of necessity is based on favorable growing weather in April and May, and the absence of the devastating hot north winds which generally visit the Sacramento and San Joaquin valleys at the more trying times. Large snow deposits on the mountain ranges in the months of March and April, as a rule, cause the north winds to postpone their visits until after the harvest.

In the local wheat market the past week, trading was unusually light, but not more so than usually obtains during a rainstorm, owing to charterers claiming their wet day prerogative, that is, not being compelled to furnish cargoes for fear of getting the grain damaged. So far as can be ascertained, holders of wheat are not pressing the market but remain firm in their views under the belief that the carry-over from the present season will be light. In

the absence of much business and more or less of a deadlock between sellers and buyers, quotations are more or less nominal. In futures, trading the past week was fair, with the bear element predominating. Several who had a short interest out are reported to have filled at the lower prices. The feeling with the longs appears to be of a conservative character—feeling their way until the outlook is more definitely determined.

The Mark Lane Express, February 18th, says: The snow has gone almost as quickly as it came; it "packed" very loosely and melted very easily on the arrival of the thaw. A period of dry and cold weather, but without any extreme rigor such as would make the land too hard to be worked, is what we now require. Farmers have begun barley sowings on suitable land, but the light, free-working, and warm soils which yield the fine barley loved by the maltster do not constitute any very large proportion of the total acreage of the country. The area of land on which good malting barley is grown remains very much the same from year to year, and unless the barley is likely to attain malting, or at least for distilling quality, it is useless to advise our agriculturists to grow it in the face of Russian and Roumanian competition. The present good demand for fine malting barley and the scarcity of samples is, we hear, stimulating a good many farmers to follow their wheat of 1888 with barley sowings for 1889. The value of foreign wheat is at the present juncture the subject of two different tendencies. For white wheat, prices tend to harden. The quiet but apparently growing demand for Californian wheat for the Continent removes to a great extent the depression induced by the one and one-half million qrs. of Californian wheat now on passage to the United Kingdom. This quantity is about 25 per cent above the average for the time of year, but if the Continent takes that 25 per cent surplus the position becomes one of reasonable strength for the English markets. There is, too, the now ascertained certainty of Australian abstention from wheat shipments. This alone amounts to a difference of over a million qrs. in the total supply of fine white wheat for the year. Turning, however, to red wheat, the influences which make for depression may be said to prevail. Russia last week increased her shipments from 63,780 qrs. to 323,684 qrs., while India is proffering soft red wheat, new crop for May shipment at 3s. 3d. per qr., a price only 6d. above the quoted value of the same sort as now arriving in the poorest of States, the very dregs and remnants of the last year's yield.

The rains have not contributed anything calculated to promote a better feeling among holders, but they have done considerable in building up the bear feeling, even at current low prices. The consumption is quite good, but not so large as was looked for, owing to the improved pasture. It is claimed by some dealers that choice plump bright brewing grades of barley are relatively scarce and when brewers come into the market later on better prices are liable to obtain. Crop prospects are of a favorable character.

Oats are fairly steady. Receipts are only fair, while the consumption is of a steady character. The low price this season stimulated the consumption.

Corn has held steady throughout the week. The present weather is favorable to a good crop. The outlook is said to point to only an average.

In rye and buckwheat the market is without any particular change to note.

Fruit.

General advices from the fruit-growing sections are of an encouraging character for a large crop of berries and stone fruits. Some dealers in this city express fears of a frost following the present rain, which, if it comes, will do considerable damage. By reference to the files of the Rural Press the writer notices that severe frosts are reported to have visited many parts of the State during the week ending April 25, 1885, which did considerable damage to the growing fruits.

Good to choice apples continue to come to hand from the Eastern States. The market for apples holds to steady prices. The demand is only fair. Oranges continue to come to hand in liberal supplies. Prices hold firm under a good increasing demand. Shipments to the distributive points east of the Rocky mountains are reported to be increasing from the principal supply points in this State.

The market for lemons and lemons is without change. The demand continues steady, notwithstanding the receipts appear to be increasing.

The stock of canned fruits in this State is reported to aggregate over 120,000 cases. This is the largest stock at this season of the year ever before reported. Canners and others in the trade are hopeful of obtaining a reduction in overland freights, so as to market the carry-over before the new season opens.

Dried fruits have a firmer and stronger tone, under lessening supplies and an increased trade looked for in the near future. All kinds of choice well-selected are getting scarce and gradually creeping up in price.

With indications of fairer weather hucksters came in on the market and bought quite freely of oranges, causing a better tone.

Feedstuff.

The rains have so far improved the natural feed prospect that many dealers look for quite a shrinkage in the consumptive demand for ground feed. This feeling restricts the demand and causes a lower range of quotations to obtain for bran and a weaker tone for other ground feed. Stormy weather has made bad roads and restricts the receipts of hay, which naturally cause a steady market even if all present indications point to an abundance of natural feed, and also to a large crop of hay.

In roots the demand has only been fair. Even low prices fail to tempt an increased call.

Live-Stock.

The market for both bullocks and mutton sheep met with another slight easing off, closing the week weak. The selling pressure continues strong, and as the consumption is lighter, sellers must accept buyers' views. The selling on commission is practiced to a very large extent. The rains we are now experiencing may lessen, for a short time at any rate, the desire to press the market with bullocks. Hogs continue scarce and high for the block, with good prices also ruling for packing. Milch cows are moving off fairly well at from \$35 to \$45 for dairy purposes. In horses, there is nothing to report, the present stormy weather being against trading.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, grain fed, 6 1/2 @ 7c @ lb.; dressed, 9 1/2 @ 10c @ lb.; soft, 5 1/2 @ 6 1/2c @ lb.; dressed, 8 1/2 @ 9c @ lb. Stock hogs, 4 1/2 @ 5 1/2c @ lb.

BEEF—Stall fed, 6 1/2 @ 7c @ lb.; grass fed, extra 6 @ 6 1/2c @ lb.; first quality, 5 1/2 @ 6c @ lb.; second quality 4 1/2 @ 5 1/2c @ lb.; third quality, 3 1/2 @ 4 1/2c @ lb.

VEAL—Small, 8 @ 9c @ lb.; large, 7 @ 8 1/2c.

MUTTON—Wethers, 6 @ 6 1/2c @ lb.; ewes, 5 1/2c @ 6 1/2c @ lb.; lamb, spring, 10 @ 15c @ lb.

Vegetables.

All advices are confirmatory of large crops of garden truck, owing to more attention given to them and also the weather, so far, being of the most favorable character for the growing plants.

Asparagus is coming in more freely, and as prices shade off the consumption increases. Green peas are lower under heavy receipts. Sweet peas are also easing off. Tomatoes are still coming in sparingly, as are cucumbers. Green peppers are as yet in light supply.

The receipts of new potatoes are only fair. The quality is improving and the demand steadily growing. For choice well-conditioned old the call is only fair.

Choice good-keeping onions are wanted and fetch good prices. The demand is for home and shipping.

Hucksters and small dealers entered the market to-day, and bought quite freely of peas, cleaning up all the cheap parcels.

Miscellaneous.

The poultry market has held to steady prices, with, at times, a slight advance obtainable for the more choice well-selected.

The rains have created a larger inquiry for alfalfa seed, and, as the stock here is reported to be light and well in hand, prices are marked up, with a still higher range not at all unlikely in the near future.

Mustard seed is held at stronger figures. The outlook for the crop is very promising.

Honey and beeswax are without change. Broomcorn is quoted higher, with hurl quite scarce and tending to still higher figures.

In wool, there is nothing doing. Dealers express themselves as having confidence in good prices ruling. The strike in some of the factories in Massachusetts may operate, to some extent, against the consumptive demand. The present rains will wash off the sheep and make the wool clean.

Hops are fairly steady, with a good strong tone for choice.

Beans are strong at the advance, with all indications pointing to still higher figures when an active demand sets in.

From the Commercial News of March 12th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port	184,606	253,943
On the way to neighboring ports	44,254	120,359
In port, disengaged	34,314	51,202
In port, engaged for wheat	41,458	34,290

Totals

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to March 12th, the following are the exports from this port:

	1889.	1888.
Wheat, cts.	10,044,497	6,768,972
Flour, bbls.	573,295	553,237
Barley, cts.	1,230,576	549,834

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Fy., foggy; Om., calm; — indicates too small to measure. Temperature, wind and weather at 12:00 M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. Observations taken at 5 P. M. instead of 12 M.

IMPORTANT ANNOUNCEMENT!

PEREMPTORY SALE

—OF—

English Shire, Clydesdale and Norman Stallions,

—AND—

CLYDESDALE MARES,

At 1 P. M., Tuesday, March 26, 1889,

—AT—

BAY DISTRICT TRACK.

By direction of Mr. I. Trestrail we will offer his consignment of THOROUGHBRED CLYDESDALE STALLIONS and MARES, comprising eight head. These are the most superior lot of Clydes ever imported to California.

We are also instructed by Mr. Morgan of Cheyenne to dispose of his consignment, consisting of four ENGLISH SHIRE STALLIONS and four NORMAN STALLIONS. These horses have been selected expressly for this market and are in every way desirable animals.

This will form the most extensive sale of stallions that has ever taken place in California. The horses are now at Bay District Track and may be seen at any time previous to sale.

Important Closing-Out Sale

WITHOUT RESERVE,

—OF—

THOROUGHBRED Shorthorn Cattle!

—COMPRISING—

60 Head of Females and 12 Head of Bulls,

—AT—

SAN MATEO RANCHO,

Property of W. H. HOWARD, Esq.,

FRIDAY - - MARCH 29, 1889

At 11 A. M.

On the above date we will offer, without reserve, the entire San Mateo Ranch Herd of Registered Shorthorn Cattle, and also 50 head of High-grade Cows and Heifers, selected from the famous milking-herd of the San Mateo Ranch Dairy.

This sale, therefore, offers special inducements, affording a rare opportunity to purchase desirable animals at moderate cost for either breeding or dairy use. These cattle have the additional advantage of being acclimated and accustomed to California ranges.

ADRIANCE "BUCKEYE" MOWERS.

MAKE SURE THAT YOU BUY THE BEST MOWER MANUFACTURED.

One that will Outwear two of any other make of Machine.

One that is very Simply Constructed and the Lightest Draft.

One that will do Better Work than any other Mower made.

TRADE-MARK "BUCKEYE."

The Machines built under the Trade-Mark "BUCKEYE" by Adriance, Platt & Co., Poughkeepsie, New York, have secured and retained the preferences of a large majority of the farmers of the

PACIFIC COAST DURING THE PAST 30 YEARS.

We have the exclusive right to the use of the Trade-Mark "BUCKEYE" as applied to Mowers and Reapers on the Pacific Coast, and caution farmers against any fraudulent attempts to steal our reputation.

BE SURE YOU GET THE

"GENUINE ADRIANCE BUCKEYE,"

ADRIANCE, PLATT & CO.

Size B Cuts a Swath of 4 feet 3 inches.

Size A Cuts a Swath of 4 feet 6 inches.

Size F Cuts a Swath of 5 feet.

Size G Cuts a Swath of 6 feet.

THE ADRIANCE REAPER Cuts a Swath of 5 feet.

REPAIRS.

CONVENIENCE AND CERTAINTY OF PROCURING FIXTURES FOR REPAIRS are very important points for a farmer to consider when selecting a machine.

We caution farmers against buying Mowers on account of the CHEAPNESS IN PRICE. The failures in the past few years of manufacturers who tried to put CHEAP machines on the market have caused trouble in getting extra parts for such machines as were sold, and have fully demonstrated the truth of the old axiom,

"The Best is the Cheapest."

AND THE "BEST" IS

The "BUCKEYE."

Each MOWER is furnished with Two Complete Scythes, Two Extra Knife Sections, Two Extra Guard Fingers, etc.

Each REAPER is furnished with Two Complete Scythes (or sickles, if preferred), Two Extra Knife Sections and Two Extra Guard Fingers, etc.

Screw Wrench, Punch, Cold Chisel, Oil Can, Bolts, Rivets, etc., and Whiffletrees and Neck Yoke, furnished with EACH Mower or Reaper.

Send for Special "BUCKEYE" Descriptive Pamphlet with prices for 1889.

READ WHAT PEOPLE SAY WHO HAVE USED IT.

STOCKTON, CAL., March 5, 1889.—R. F. WILSON—DEAR SIR: I consider the Improved Davis Windmill superior to all other Windmills. It will run with very little wind, is very simple and compact in construction, does its work well, and is a good regulator. One of the best points is that there is no expense for repairs, and very little attention as to keeping the bolts tight, there being less bolts in it than any mill I ever saw. The storms do not injure it in the least, as it will turn away from the wind when it blows a gale, and will return and face it when the wind is moderate. It is strong, simple, durable and a good regulator. Yours truly,

J. L. BEECHER, President Farmers' Union, Stockton, Cal.

STOCKTON, CAL., March 3, 1889.—R. F. WILSON—DEAR SIR: I pronounce your Improved Davis Irrigating Windmill superior to all other kinds. The amount of water they will pump is wonderful. They are splendid regulators. Yours respectfully,

J. M. WELSH, Manager Stockton Milling Company.

Rattletrap Windmills Doomed!

You cannot resist buying when you get my prices. Do not listen to parties who have more gab than brains. Get informed through disinterested parties. The Improved Davis has driven all competitors from the great San Joaquin Valley.

Another Bearing Date Palm.

In our issue of February 2d we gave a large photo-facsimile of a bearing date palm and its companion staminate tree in the garden of J. R. Wolfskill, near Winters. The facts there recited concerning the date palm in California

children. The interest centers in the row of date palms which are the most prominent feature of the picture. These trees sprang from the seed of the date of commerce and still stand in nursery row as they were first set out. The first fruit was borne in 1877 when the tree was about 12 years old, the date of bearing and

As the engraving indicates, the trees have suffered by their close association in the row, and are not as shapely as the trees in John Wolfskill's garden, where they have more room and rather better treatment.

The picture shows the tree in fruit, its heavy clusters emerging from the base of the leaves.

AID FOR CHINA.—The Government of China has for the first time been compelled to make an appeal to America for aid in relieving the sufferings of her subjects. Floods and drouth have wrought terrible havoc in three of the largest districts of the Celestial Empire. It is reported that in a single district—that of Hoi

BEARING DATE PALM ON THE FARM OF MRS. S. O. WOLFSKILL, NEAR WINTERS, CAL

have also a bearing upon the handsome engraving on this page, and the reader is referred to them.

The picture presented herewith is a reproduction by the Dewey Engraving Co. of a photograph taken last fall by W. R. Nutting. The observer looks toward the northwest and the distant hill-outline is the crest of the Coast Range northward of Putah canyon. The foreground is on the farm of the late S. O. Wolfskill, now owned and conducted by his wife and

the age of the trees agreeing closely with the fruiting of the tree shown in our issue of February 2d. It was the fruit from one of the trees in this picture which was shown by the Rural Press at the Mechanics' Fair of 1877 as the first California grown date brought to public notice. It was one of the trees from this row which was taken up by W. G. Klee, and planted out on the grounds of the New Orleans World's Fair in 1885, the tree surviving well its removal and long journey to Louisiana.

The fruit in this case is a bright yellow, rather more than an inch in length, and it is a later maturing variety than the tree shown in our earlier engraving. Some seasons are, however, propitious for its ripening, and the fruit is highly esteemed by the family.

MARIPOSA people are discussing the formation of an irrigation district under the Wright law to obtain the water of the south fork of the Merced river for local use.

—half a million persons are in a state of starvation. The Chinese merchants responded promptly to the cry of distress from Chicago, Charleston and other cities of America visited with disaster, and now hope for a liberal response to this appeal.

ABOUT 100 of the veterans have been transferred from Yountville, Napa county, to the National Veterans' Home at Santa Monica. There are still left at Yountville about 250 men.

Napa County Notes.

EDITORS PRESS:—Never was there a more brilliant prospect for good crops of cereals and fruits of all kinds in this county than at present. Because we have had not one old-fashioned storm this winter, and because the rainfall was, up to the first of this month, much below the average, some prophets thought the season would be a dry one. But since the 8th inst. warm, heavy and very welcome showers have soaked the ground that was not yet suffering for moisture, and now an abundant harvest is assured. The rainfall to date is about 14 or 15 inches.

But be seasons ever so dry and short crops the rule in other portions of the State, Napa valley is always sure; has never been known to fail. Now the season has so far advanced, the days are so warm, and the earth is so moist, grain is growing very fast. Early-sown fields have been, in several instances, mowed because the grain was so rank. Late sowing looks fairly well.

What a glorious winter this has been! We've had no driving storms, no high winds, no frosts to speak of, and much of the time the days have been "like days in June."

The orchardists and the vineyardists are busy, and their work is well advanced. Notwithstanding the low prices for dried fruit that have ruled for some time past, our fruit-growers are full of hope. New orchards are planted, old ones enlarged, and more interest manifested in this branch of farming than ever before. We note, along this line, that the spraying of fruit trees is practiced in many orchards this spring where little or no attention was paid to this pest eradicator heretofore. Then again, as a general thing, only the most approved varieties have been planted. Long since the stock of our local nurserymen ran low.

Both grape-raisers and orchardists see more and more the value of underdraining low places, and this spring a large quantity of tile has been laid. That put down in years past proved of much benefit both to grain lands as well as to vineyards and orchards.

It has been decided to reopen the large fruit cannery at Napa City this season, and this will afford a home market for much of our fruit, than which there is no better raised. The cannery will be under new management and it is expected a large amount of fruit will be put up. This will stimulate our fruit-growers to greater efforts, for with the exception of one year our valley orchardists have had to seek other markets for much of their produce.

Our agricultural fair will be held this year in August, and already preparations have been made that insure its success. The fair of last year surprised even the most enthusiastic friends of the association by its success, and to the coming fair much attention is given. Undoubtedly it will be one of the most noted held in the State, as was the last one, which also was the first one. Already a large number of entries of fine horses from various sections of the State have been made. One result of the fair last year is seen in the desire more than ever to improve the breed of horses in the county. There is no reason why Napa county should not raise as fine horses as any other county, and she probably will. Of late years quite a number of thoroughbred Norman stallions have been purchased by residents of the county and some fine colts have been reared. But there is a desire on the part of many farmers, as well as others, to raise roadsters or horses of all work not so heavy or cumbersome as the Normans. Yet large horses will always be in demand. No finer truck teams can be seen anywhere in the State than are daily at work in the streets of Napa City.

An imported Clydesdale stallion has been purchased recently by one of our horse-breeders, the first stallion of this breed that has been in the valley for some years. The admirers of the Normans will still breed these noble horses, but there are those who, while thinking that the two breeds in many ways resemble one another, prefer for various reasons the Clydesdales. As regards the rearing of cattle, although many are raised in the county annually, not so much attention is paid to raising blooded stock as is given to the rearing of horses. There are a few exceptions.

Evidently the railroad officials anticipate a busy time on the road running through this valley this season, for new side tracks are being laid at different points and the roadbed put in excellent shape. The amount of freight hauled over the road last season was very large, and it has been said that this road is the best paying one, considering its length, in the State. All this shows that the amount of our produce is increasing, that our population is being added to continually, and that the county is in a sound, healthy condition.

Knowing as we do our advantages, we sometimes wonder we do not have a large influx of Eastern people who desire homes in our genial climate. We are off the main line of travel is one reason. Little real estate outside our towns has changed hands since last December, but it is not because there are no farms for sale.

Considerable hay is still held by farmers and others in all portions of this valley, for the reason that prices have ruled low since last

harvest. Much of it will have to be marketed soon or held over, for the haying season is not very far off and the prospects for a large yield are good. In this connection it might not be out of place here to say that stock have never before been wintered with so little trouble as this season. Since the 15th of last November grass has been plentiful on the hills, and we have had no real cold, frosty weather.

A little work in brightening up farm buildings and yards at this season of the year when there are days when regular farm work is slack, pays many per cent in every way. A dollar or two spent for lime for whitewash will be money well spent. Especially does this apply to those desiring to sell their farms. May I give your readers a good recipe for

Durable and Brilliant Whitewash?

One-half bushel good lime, five pounds rock salt, dissolved; one-half pound whiting, four pounds ground rice, boiled to a thin paste; one-half pound clean grease. Slack the lime in a tight box or barrel with hot water, keeping the box covered that the steam may not escape. It can be tinted if desired. Slack to the consistency of thick cream. Thin it when used, so that it will flow freely from the brush. If put on too thick it will flake off more or less when dried.

The above is for outside work. For indoors, slack the lime as above with hot water, omitting the salt, grease and rice. Instead of thinning the creamy solution with water, use skim milk. This latter is a secret worth knowing.

As I close this letter, heavy and continuous showers, accompanied with considerable wind, are falling, and there is a prospect that our open ditches may be filled for the first time this winter.

Napa, March 11, 1889.

Hollister and Vicinity.

EDITORS PRESS:—It seems to be a distinguishing peculiarity of Californians, be they residents of the extreme north or the south, the Sierra range or the coast counties, to estimate the advantages of their locality above those of every other, and the people of Hollister are no exception to this rule. As a disinterested traveler, your correspondent has no disposition to quarrel with them on this score, and after a careful inspection made on a recent visit to this thriving town and surrounding country, is prepared to accord them much of the credit which they claim to be due their portion of the State.

The town of Hollister, besides being the capital of San Benito county, with a fine new courthouse and other creditable public and private buildings, is the commercial center for a large settlement extending in all directions, and is connected by a narrow gauge railroad with the S. P. R. R. at Gilroy, 14 miles westward. The San Felipe district, 5 or 6 miles north, has become famous not only as an artesian belt, but for the excellence of its soil and enterprising character of its inhabitants. Among the residents is a goodly number of devoted friends of the Rural. On my visit I was hospitably entertained at the princely homestead of Messrs. Donnelly & Dunn, which is gaining considerable notoriety as a farm for the rearing of fine horses, embracing roadsters and trotters. The ranch consists of about 17,000 acres, and from the excellent pasturage afforded upward of 1000 head of beef cattle are marketed annually. Col. Burns, an intelligent and obliging gentleman, is manager of this farm.

I also passed a night at the Ansoymas rancho adjoining Donnelly & Dunn's, Y. Malarin manager. It contains 18,000 acres, 5000 of which is valley, the remainder hill-pasture land. The ranch was located in 1835 by the Pacheos. It is adorned by an adobe dwelling of monstrous proportions, which, though erected in the long ago, is still in as good condition as ever. The proprietor devotes his chief attention to stock raising, and takes pride in pointing out to visitors blooded specimens of the horse family that are certainly a credit to his scientific method of breeding.

Along the foothills of the Gabilan range south of Hollister considerable attention is being paid to the propagation of fruits and with most gratifying results. The soil is of a sandy loam, easily worked and wonderfully productive—especially that verging the valley along San Benito creek. One of the most thrifty orchards just beginning to reward its owner with fruit crops is that of Geo. T. Elliott. The writer will not soon forget the pleasant evening spent at Mr. Elliott's homelike dwelling, and acknowledges his obligations for valuable assistance rendered by this gentleman in the re-establishment of Hollister Grange.

The Bonnie Brae farm, about 2½ miles south of town, owned by Cunningham, Curtis & Welch of San Francisco, promises in many respects to become a model fruit farm of the county. It consists of 365 acres, 175 acres of which is now planted with trees and vines. Mr. Scholefield is also a stockholder in the property and is its efficient manager.

Around old San Juan, seven miles south, is to be found some of the finest land in the county, and here are some good farmers, among them the Breens, who, by the way, it may be interesting to note, were of the Donner party, a number of whom shared such tragic fate as emigrants at Donner lake in 1847.

There is also something of interest about the old town of San Juan, for here stands the old mission church, built in 1797, in fair state of

preservation. It is a pity that the place is not connected by railway, for it has every other necessary feature to make it a thriving commercial center.

F. B. L.

THE FIELD.

Ordinance Against the Squirrels.

The Contra Costa farmers are still at work against the squirrel nuisance. The Martinez Gazette of March 6th has the following:

Next Saturday afternoon a mass meeting is called at Bennett's hall, in Martinez, to discuss the squirrel question generally, and to consider the draft of a squirrel enactment that will be presented to the Board of Supervisors at their meeting on the 15th inst. for adoption. It would be a mere waste of words to enlarge upon the importance, and indeed actual necessity, of checking the squirrel nuisance, or as we believe to be wholly practicable, of so nearly annihilating them that their depredations shall cease to be a source of serious loss, and their numbers so small as to be easily controlled. The situation is so universally admitted that no argument is required. The only point of contention is how unity of action can best be secured, and a system developed that will secure the cooperation of the farmers generally, without which anything like practical extermination is wholly out of the question.

The committee appointed at the last meeting has been working in connection with the District Attorney in framing an ordinance, which will be submitted to the meeting on Saturday next for its approval. If it meets the views of those present, it will then be presented to the Board of Supervisors with the request that it be adopted and become a law. In order that full opportunity may be given for examining its features, we publish below the draft of the instrument in its present shape, and strongly urge every farmer, vineyardist, fruit-grower, and all others who have suffered by the squirrel pest, to be present and give their indorsement to the measure proposed. The following is the ordinance:

An Ordinance to Provide for the Extermination of Squirrels in Contra Costa County.

The Board of Supervisors of Contra Costa County do hereby ordain as follows:

SECTION 1. The County of Contra Costa is hereby for the purposes and objects of this ordinance divided into districts, the boundaries of which districts shall be the same as the several school districts of said County, and each of said districts shall be designated Squirrel District _____ (the name applied to the school districts respectively.)

SEC. 2. In each of said districts the Board of Supervisors shall within _____ days after the time of the taking effect of this Ordinance, appoint one or more Squirrel Inspectors for said district, as the extent of said district and the duties therein to be performed may in their judgment require. The person so appointed must be a qualified elector of the district for which he is appointed and a freeholder therein, and shall within ten days after his appointment execute a bond to the County of Contra Costa in the sum of two thousand dollars for the faithful discharge of his duties under this Ordinance, and take the usual oath of office. The said bond shall be executed in all respects as other official bonds of district and township officers are required to be executed, and the sureties thereon shall justify in like manner, and shall be required to have like qualifications. The bond when executed shall be approved by the County Clerk and filed in his office.

SEC. 3. All land in the County of Contra Costa, taxable therein, shall by the Squirrel Inspectors of the said several districts, one County Inspector and one elector and freeholder in said district, be graded in four grades as follows, to wit: 1st, Free; 2d, Nearly Free; 3d, Medium; 4th, Badly Infested. Which grading shall be done between the first day of July and the fifteenth day of September in each year, and the owner or occupant of said land or the agent of the owner thereof notified of such grading within five days thereafter.

SEC. 4. It is hereby made the duty of every land-owner in said County to commence to thoroughly exterminate the squirrels on his land on or before the 1st day of October in each year, and if he shall fail or neglect to do so before the 15th day of the same month, then it shall be the duty of the Squirrel Inspector of the District in which said land is located to enter upon the said land and thoroughly exterminate the squirrels thereon; and he shall for that purpose have full right and authority to enter upon all lands in this county for that purpose and full power to arrest any and all persons obstructing him in the discharge of his duties.

SEC. 5. For all lands graded as "Free," the owner shall not be entitled to receive any sum for exterminating squirrels. For lands graded as "Nearly Free," the owner shall receive five cents per acre for exterminating squirrels thereon. For lands graded as "Medium," the owner shall be entitled to receive ten cents per acre for exterminating the squirrels thereon, and for lands graded as "Badly Infested," the owner shall be entitled to receive 15 cents per acre for exterminating the squirrels thereon, provided he in each case shall exterminate the same within the time last before specified, and perform such work thoroughly and effectually and to the satisfaction of the inspector of the district and at least two-thirds of the land-owners surrounding said land. In cases where the land-owner shall fail to poison the squirrels on his land, and the same shall be done by the Squirrel Inspector, that officer shall receive the compensation allowed land-owners for such poisoning.

SEC. 6. It shall be the duty of the Inspector of, and two land-owners adjoining each of the said districts, after the 1st day of February in each year, to inspect the lands of the several land-owners in their district, and to give to each land-owner who shall have thoroughly and effectually poisoned and exterminated the squirrels on his land a certificate signed by two or more land-owners adjoining said

lands of the fact of such extermination, stating therein the number of acres on which said poisoning has been done and the grade thereof, which certificate shall entitle the said land-owner to receive from the County Clerk a requisition on the County Auditor for the sum to which he shall be entitled, as shown by such certificate, on the surrender thereof to the said Clerk. All payments herein provided for shall be paid out of the general funds of the County, in the order of their presentation. The Inspector of each district shall receive \$3 per day for each day in which he shall be engaged in the inspection of the lands of his district, for which service he shall file a claim against the County duly verified as other claims against the County are required to be verified, which shall be allowed by the Board of Supervisors and ordered paid out of the general fund of the County.

The Broomcorn Industry.

[Written for the Rural Press by J. R. F.]

The cultivation of broomcorn in this State ought, if properly carried on, to be quite remunerative. The population of the coast is increasing at a rapid rate, while the trade with the countries washed by the Pacific ocean is not only large but steadily growing. This calls for a larger consumption of brooms, and also for more broomcorn seed for feed. The consumption in this State of the former is placed at about 950 tons for last year, while for the coast it is claimed by those in position to know that it aggregates fully 1200 tons, equivalent to 1,080,000 dozen of brooms. Last year there was exported to Australia 795,000 pounds of broomcorn and 78,000 pounds to New Zealand. Total, 873,000 pounds, or 436½ tons. This gives a requirement last year for this coast of, in even numbers, 1600 tons. As the crop in this State did not aggregate more than 500 tons, the imports from the Central States must necessarily have been fully 1100 tons. This quantity should have been raised here, for there are many sections in this State well adapted to its cultivation. To bring the broomcorn from the Central States to this city the freight by the car-load is \$50 a ton. The cost of the broomcorn in Chicago ranged last year from \$35 to \$50 a ton for damaged or stain, and common grades to fair grades, and from \$55 to \$80 for barely good to the more choice. Adding first cost and freight together, it will be seen that there is a decided margin in favor of the California product—quality being equal. Last year the crop in the Central States was a full average for the common grades, but light for the more choice long fibered. The large crop of common to fair was necessarily against prices owing to more selling pressure, therefore the general average ranges, as given above, are below those that obtain during a short crop season.

Last year in this State the outturn was below an average with the quality generally poor, yet notwithstanding this the price paid was quite satisfactory, ranging from \$65 to \$80 a ton according to quality. About all harvested was allowed to ripen too much, probably, to save the seed, which commands on an average in our market \$15 a ton. The brush was generally dead and colorless, not possessing that lively, bright green color so greatly desired by manufacturers of brooms. Besides this, much of it was curly or "gnarly," which was also against its market value. It is claimed that at about the most critical period of its growth there was an absence of rain which retarded its growth and produced a poorer grade, for the bulk was short fibered and curly, and difficult to work in satisfactorily.

From Mr. N. Plancich of Zan & Plancich, broom manufacturers of this city, the writer obtains the following:

The crop last year was light, owing to a dry season, while the brush was generally short and overripe. In regard to the raising of broomcorn, he says that the plant thrives best in the interior, distant not less than 125 miles from the coast. The soil best adapted to its growth is the rich and loamy bottom land—river, tule, or slough—and the climate warm, particularly at night. Broomcorn grown near the ocean is short or curly, and not fit for use. The same remarks apply to it when seeded on either rolling or highland. The seeding is done with a drill, and at the same depth as wheat is sown. The rows are not as far apart as are those of corn. If the plants are too thick they should be thinned by pulling up the more delicate.

In answer to the writer's inquiries, Mr. Plancich said that the broomcorn from the Central States cost laid down here from \$110 to \$125 a ton for the larger and fine fibered, called self-working, while for the long fibered Californian the price runs from \$75 to \$80 a ton. That is the difference this season. Why the difference is so great is explained by him to be the selecting and quality. The imported is long, green, and fine fibered, while the California is long, colorless, and generally poorly selected. The growers in the Central States assort their brush, putting each grade by itself and baling them separately, while here, as a rule, very little attention is given to assorting; consequently the price paid is less proportionately than if the grades were carefully selected and baled separately.

Mr. Plancich says that last year there was a light crop of hurl (long and straight) broomcorn both here and in the Central States, and that the supply is already nearly exhausted; consequently for this kind high prices not only obtain, but still higher ranges are looked for in the near future.

In regard to the Australian demand, Mr.

Planch says that it is not only large, but steadily growing. He also states that to be abreast of the times his firm has established a broom factory at Melbourne, taking from here American workmen. He says that if the venture proves a success, they will establish another factory at Sydney. All the brush used in the manufacture of brooms is to be sent from this city.

THE STOCK YARD.

Live-Stock Fairs and Movements.

EDITORS PRESS:—The Illinois State Board of Agriculture having determined to discontinue the horse show heretofore held in connection with the American Fat-Stock Show, now turns its attention to the encouragement of the beef and dairy cattle interests. Herd prizes of \$150, \$75 and \$50 will be given the following breeds: Shorthorns, Herefords, Devons, Angus, Galloway, Sussex, Red Polled, Holstein, Jersey and Ayrshire. A competing herd shall consist of one bull two years old or over, one cow three years old or over, one heifer two years and under three years old, one heifer one year and under two years old, one heifer under one year old. The management of this part of the exhibition will be in the hands of Hon. La Fayette Funk.

The Illinois State Board of Agriculture will offer also at the American Dairy Show, in connection with the Fat-Stock Show, November next, three milk test prizes of \$50, \$25 and \$15. For these, all recorded breeds of cattle may compete. They will be judged by the milk product of three successive milkings, the value of the milk to be estimated from the weight and tested butter qualities. Hon. E. E. Chester will have charge of this department. In addition to the above the American Shorthorn Breeders' Association places at the disposal of the Illinois State Board \$250 for the encouragement of dairy qualities in Shorthorn cattle.

From the new secretary of the State Board, I learn that the premium-list for the Illinois State Fair is ready for the printer and will be issued by the first of April.

Applications for membership in the American Southdown Association are coming in at an encouraging rate. C. J. Bailey of Maine, M. D. Hartshorn and L. C. Anderson of Ohio are the latest. The list of members in the National Swine-Breeders' Association is also making a good growth. Another evidence of life and action among stock-breeders is the plan now under way by the Illinois Shorthorn Breeders' Association for placing an agent in the field whose special work it shall be to encourage the rearing and feeding of Shorthorn cattle. If the admirers of other breeds of improved stock will now show a like spirit of enterprise, the saying "the scrub must go" will soon be changed for "the scrub has gone." There will still be abundant room for the exercise of skill in improving even what we may then have.

Springfield Ill. PHIL THURFON.

Raising Calves.

EDITORS PRESS:—We have had some experience in stock-raising, and often people remark that our cattle seem to be larger than most of the cattle one sees on ranches.

I will tell how we manage to have our stock large and fine-looking. I think that the feeding and care they receive does more toward improving them than the breed does, though of course if one has a scrub or run-out breed of cattle, he cannot expect to raise fine stock from it. I believe that any breed of cattle will become scrubs if allowed to breed too young, as the heifer is not full grown until about two years of age, and consequently needs, until that age, all the strength she can derive from her food to develop with, and cannot thrive well when giving milk to support a calf. The result is both cow and calf are stunted.

We feed the calves by hand, providing them with a warm, sunny pen to run in, where they can nibble at the grass. At first we feed the calf new milk for about two weeks, then let the milk stand 12 hours and skim the cream off before feeding it to him. We then make a thin gruel of shorts, boiling it well before putting it in the milk, and use about half a pint of shorts at a time for the gruel. One sack of shorts ought to last two calves as long as they need be fed milk. The calves like this kind of feeding and thrive upon it.

We now put a bucket of water in the pen for him, fixing it securely so that he cannot spill it, and also give him a bunch of nice fresh hay very day to nibble at. When about a month old we let the milk stand 24 hours before skimming it, and put a muzzle on the calf and turn him loose to take his chances with the herd. He will come promptly up every night and morning and bleat for his breakfast and supper until four or five months old, when he will do quite nicely on grass without the milk.

I will give two remedies we find useful: For scours on calves.—Mix a handful of rouned flour in a pan of boiling milk; let it cool until lukewarm, then feed. Use this treatment twice a day until cured.

For bloat.—Give a teaspoonful of baking soda and one of ground ginger, dissolve in a little cold water; then mix into a quart of boiling

water, put in a bottle and turn down the calf's throat as hot as he can drink it. Rub the stomach briskly and keep him moving around. We have known calves suffering with bloat to be relieved almost instantly, while those which were not treated this way soon died. L. Z. Tres Pinos, Cal.

The Proposed Shorthorn Association.

EDITORS PRESS:—Mr. Peter Peterson some time since made mention through your columns of the necessity of the organization of a Shorthorn Breeders' Association. The proposition met with some favor, but has never assumed any definite shape. This is an age of co-operation, and unless the Shorthorn breeders of this coast avail themselves of such advantages, they cannot reasonably hope to keep abreast of the progressive men of the Eastern States.

There is no reason why we should not be able to produce such cattle in this State as will attract the fine breeders of the East. The breeders of horses on this coast have made a reputation for their stock and are now supplying quite a demand in the East. We have the same facilities possessed by the breeders of horses—why not improve them?

All those who think that the interest can be forwarded by such an organization will please communicate with me, and if sufficient numbers respond to warrant the attempt, we can arrange for a meeting for some time in April.

Colusa, Cal. E. A. BRIDGFORD.

[We trust this invitation of Judge Bridgford will be widely complied with, and then he can prepare a call for the meeting for publication in the Rural, so that all interested may be notified. —EDS. PRESS.]

THE DAIRY.

Co-operative Dairying—Cost of Creamery.

EDITORS PRESS:—In several papers lately I have read that efforts were being made to establish creameries in several localities in this State, and I have every reason to believe that such enterprises will pay as well in California as they do in the great dairy regions of Illinois, Iowa, Minnesota and Wisconsin, provided the same general care is exercised in this State as in those States. Those who are about to engage in such enterprises must not pay exorbitant prices for buildings and machinery, for if they do, the result will be disastrous. I am not sufficiently acquainted with the cost of building material in this State to say what would be a fair price for a creamery building, but in Illinois, a main creamery building is 20x40 feet; ice-house, 20x30; and boiler-room, 16x18 feet; and all the necessary machinery for making butter can be furnished for \$2000. Such a creamery has a capacity sufficient to manufacture from 700 to 1200 pounds of butter daily, and should greater capacity be required, adding to the width of the main building will give it. Building material may cost more in this State than it does in Illinois; if so, it will be an easy matter to figure the cost of a building of the above size.

A number of years ago professional creamery-builders visited various localities in Nebraska, Kansas, Iowa and Missouri, erecting buildings at a cost of \$5000 to \$7000, and the stockholders soon discovered that they were being outrageously fleeced by the charpers, and had nothing to show for their money except an expensive building.

Practical creamerymen saw through the scheme and exposed the ways of the professionals, and their occupation in that portion of the country was gone. Californians should guard against extravagant buildings and useless machinery; put up only such buildings as will be needed, and buy no more machinery than will be required.

California offers a remunerative field for co-operative dairying, if one may judge from the newspaper articles about the amount of butter imported from the other States. Take the county of Los Angeles for instance, which, according to a local paper, sends \$1,728,000 annually to other States for butter and cheese, and probably other counties send like amounts in proportion to population. This should not be, and doubtless there is capital and enterprise enough to grasp the situation and stop such an enormous outflow. Once demonstrate that dairy farming, intelligently carried on, will pay, and there will be plenty of men and capital to conduct the business. Do not think land is too high-priced for dairy farming; it is in some sections, but \$50, \$75, and even \$100 per acre land can be made to pay quite handsomely, if devoted to dairy farming; besides, the business adds to the value of the land. A few years ago a large portion of Northern Illinois was worn out and almost worthless from continuous wheat cropping, and the land could hardly be sold at any price. Farmers turned their attention to dairying, and soon a change was observed; the land, from frequent manuring, regained its richness; new and improved houses, commodious barns, better stock and a general appearance of thrift was everywhere visible, and to-day the old, worn-out lands of that section are held at from \$75 to

\$125 per acre, and all this brought about in a few years by dairying in a systematic manner.

In California, with hardly any cold weather, cows will do better than in the Northwestern States, and with silos, which can be cheaply built, green feed can be had the year round, and with the addition of roots, bran and grain, cows ought to net the owner from \$80 to \$100 each, and much more if they be good cows. The climate, too, is favorable for dairying, and a larger yield of cheese is had here than elsewhere, and I presume the same is true of butter.

There need be no fear of overdoing the butter business on the coast so long as such counties as Los Angeles send abroad annually nearly \$2,000,000 for butter and cheese. The establishment of creameries will do away with pickled butter, which at best is hardly fit for the table. It is difficult to detect rancidity in pickled butter, and of course it is lacking in that fine aromatic flavor so highly prized by all lovers of good butter, and which can only be had when the goods are fresh. The aim of dairymen in the Northwestern States is to get their butter into the market fresh from the churn, and the result is better prices than if the goods were pickled or held for an advance in prices.

Speaking of dairying in Northern Illinois, the Chicago Tribune of a recent date says:

"Few people have an idea of the amount of butter which is handled by the dealers of the handsome and flourishing little Illinois city of Elgin. There was a time, not so many years ago, when the rich farming country which is tributary to it was given up to the growing of wheat. The competition of the cheaper lands to the north and west made wheat-raising less profitable, and the farmers all took to dairying. The result is that in 1888 Elgin handled 17,195,578 pounds of butter and 4,369,000 pounds of cheese. The butter sold for \$3,009,020, the price per pound ranging from 19½ cents in June to 33 1-5 cents last December, when the price was run up beyond all bounds. The country around Elgin appears to have devoted itself too exclusively to butter. The cheese which it made brought on the average but five cents a pound—a low price for a first-class article. More pains in the making would probably have made the manufacture more profitable."

If the Tribune had known, it might have said the fault of the cheese was that it was made from skim milk, and was probably what is known as "filled cheese." Certainly it was not good, wholesome, rich, full-cream cheese, which is so desirable as a condiment and which is frequently used in lieu of meat. I hope California will never produce any of that abominable, indigestible skim cheese so prevalent in the Northwestern dairy section.

In all things pertaining to the dairy, exercise care and judgment and the best results will be obtained. R. P. MCGILINCY.

San Jose, Cal. March 11, 1889.

"Sapsago" (Schabzieger) Cheese.

This rare and curious cheese affords an instance of a corruption of language which completely covers and hides the true meaning. Sapsago is very clearly a corruption or derivative of the German term *Schabzieger*, from *Schaben* grated, and *Zieger* curd. This cheese is made in Switzerland, and chiefly in the canton of Glarus, where it is locally termed *fromage verte de Glaris* or green cheese of Glarus, by those who use the French language. It is somewhat like our pineapple cheese, a sort of double manufacture, the curd being put through a secondary process which gives to the product its peculiar character.

This cheese is made as follows: The milk, collected upon the mountain pastures, is skimmed and curdled in the usual manner. The curd is then put in vessels made of fir or spruce bark, pierced with holes through which the whey escapes. In this condition it is kept in the cool pure air of the high mountains until the autumn, when the herds are brought down to their winter quarters in the valleys. During this time a slow fermentation, moderated by the coolness, goes on in the curd. When the curd is removed to the valley farms it is put in sacks and loaded on to the wagons. On its arrival the sacks of curd are put in a press, heaped one upon the other, and squeezed to expel the remaining whey. The curd is left under pressure for three or four weeks. It is then ground in a mill, consisting of a circular trench or pit of cut stone closely joined and cemented. A strong vertical shaft of wood is fitted in the center and to this is fixed a stone roller of a truncated-conical shape, which weighs a ton and revolves slowly around the circular floor. When the curd is put into the mill it is mixed with two and one-half per cent of its weight of dried and pulverized leaves of a species of *Trifolium*, having deep blue or purple blossoms, locally called blue melilot (but more probably *Trifolium alpinum*), and four to five per cent of salt. During the grinding or crushing, the attendant takes care that the work is evenly done and the curd is passed repeatedly under the roller and ground to a smooth paste. The curd is then shoveled out of the mill into a shallow vat, from which it is put into molds of the form of a truncated cone, of various sizes, from one pound upward. The patty curd is pressed into the molds by a pestle of hard wood; and for the easy removal of the sticky paste the mold is smeared with sweet oil and then lined with a cloth. As soon as the

cheeses are firmly set they are taken from the molds and placed in drying-rooms on shelves, where they are carefully guarded against contact with air currents by which the cheeses would be cracked and made to crumble from excessive dryness. The drying continues for a year or more, until the cheeses are quite hard.

The Schabzieger cheese is of a clear green color. The largest cheeses found in the Paris market, where they are mostly sold, are about four inches in height and the same in diameter, and they sell for 65 cents per kilogram, or about 27 cents per pound. They are served at the table grated and are eaten with pastry, pies, or with fruit, at the dessert. Their odor is strong, and it requires—for most persons—a considerable training before the palate and stomach become accustomed to the peculiar smell and flavor. This cheese has been an article of manufacture and trade in Switzerland for more than 300 years.—H. Stewart in American Agriculturist.

METEOROLOGICAL.

The Laws of Storms.

Meteorologists are not yet agreed regarding the laws that govern the origin of storms. Storms of all kinds, whether they are called tornadoes, hurricanes, cyclones, or typhoons, present in a general way the same phenomena, that there is an area of light atmosphere, or low barometer, as it is called, toward which the air rushes from all sides to fill the vacuum, thus producing a whirling movement near the center. There is at the same time a motion forward in a given direction. The greater part of those who are within the range of a storm only feel the wind as blowing from a fixed quarter, especially when its diameter is great, and this may sometimes be 2000 miles. In the very center of a typhoon or cyclone there is a dead calm, which lasts but a few minutes, after which the object, be it a ship or village, finds itself in the midst of a conflict of the elements more terrible than ever. In this revolution of a storm around an upright axis the revolution is in the northern hemisphere from right to left, and in the southern hemisphere from left to right.

To understand a storm, it is always necessary to go back to first principles. Its origin is invariably near the equator, where, on account of the eastward movement of the earth, the winds have an apparent direction toward the west; but as the revolution of the surface of the earth north and south of the equator is less rapid, owing to its diminished diameter, as these air currents diverge therefrom they immediately take an apparent direction toward the east.

Given this law of air currents, it only remains to consider the great cause of storms, which is the unequal heating of the air over the earth's surface. Storms have their favorite routes of travel. No storm was ever known to travel from Boston to Philadelphia, from Chicago to St. Louis, or from Nashville to New Orleans; and when the word storm is used it means the storm center. Storms cross the Atlantic invariably from America to Europe and exhaust their force on the coasts of Great Britain and France, or not far in the interior. They never return by the same route.

When a large area of air near the surface of the earth has been heated to a high temperature, it rises, giving origin not only to the currents that rush in from all sides, but causing a mass of the colder air to fall from the upper strata of the atmosphere. It is principally this cold air falling from above that produces relief after a heated term, after a thunder-storm or during a hot summer night. People say after a summer shower, "The rain has cooled the air." This is a fallacy, for it is not the rain that cooled the air, but the cool air falling from the upper strata of the atmosphere, or in some cases coming from a cooler, northern latitude.

According to the theory of M. Faye, into an air vacuum at the surface of the earth falls one of the eddies already formed in the upper stratum of the atmosphere. The rotary motion increases in velocity as it descends, not only from causes inherent in itself, but because the conditions of the lower air are favorable to the propagation of the circular movement. Hence result the storms that are most terrible in their effects, such as the cyclones of the West, the cyclones of the Indian ocean, and the typhoons of the China seas. It would, perhaps, be too much to assert that were it not for these upper currents and eddies there would be no cyclones, for the lower stratum of atmosphere appears to contain all the conditions necessary to their formation; but it is certain now, as it always has been, that the descending currents produce violent complications.

Sailors assert that the wind blows in certain cases straight downward. They have not only felt it, but they say that it is the cause of that condition of the sea when the waves seem beaten flat upon its surface. It is useless to understand the nature of air currents and the cause of storms unless the knowledge assists in navigating the ocean, and in the protection of life and property by sea as well as on land. In this study of the weather it is pleasant to know that this country has always taken and still maintains the lead, simply because as a practical people we approach the subject from its practical side.—S. F. Chronicle.

The Deputy Meeting.

We are glad to notice interest taken in this coming meeting. There are timely reasons why it is likely to prove a gathering of importance. We are now adopting the new ritual in many of our Granges. There is every prospect of our having the National Grange held in California, which (through conferring the sixth and seventh degrees and other advantages) means new education and life to our whole Order on this coast. We have commenced the reorganization of Granges in good earnest in the southern part of our State, and we wish the good work continued and extended all over our State and coast.

There are many things of deep importance to Patrons which cannot be published in the press, or wisely sent out in circulars, that may properly be discussed in the State meeting of Deputies, and information taken therefrom and given from word of mouth to all Patrons in their subordinate Granges.

These are some of the reasons which make this meeting one of importance. Let every live Granger see that the subject of this meeting is brought before his subordinate Grange and discussed, and some plan provided whereby one or more representatives, as visitors at least, may be present to help make the meeting a success. All Patrons who can identify themselves as in good standing we understand will be admitted as honorary members at least.

We have hastily written the headings of some subjects, which we think might be profitably discussed, in order to induce Patrons generally to consider the matter, and, if possible, suggest other subjects for consideration at the meeting, not expecting our suggestions will be, by any means, the final or formal order of exercises.

Exercises Suggested.

1. Report of the Worthy Master.
2. Reports of the General Deputies.
3. Reports of the Deputy Lecturers.
4. Report of the Legislative Committee.
5. Consideration of the letter of the Worthy Master of the National Grange concerning the organization of a Grange Inspection Board, to visit and encourage Granges in different parts of the State.

SUBJECTS FOR CONSIDERATION.

6. Matters relating to the meeting of the National Grange.
7. The best plan of action for increasing the number of Granges in this State.
8. The best plan for adding new members to the Granges already organized.
9. Arranging the best dates for subordinate Grange and union Grange picnics for the convenient attendance of speakers and to make them all a success.
10. The matter of an excursion to Oregon.
11. Plans for co-operation in making purchases.
12. Questions and decisions relating to the work of the new combined ritual.

The meeting is to be virtually one of conference for the good of the Order. Let every one see that his part is done to make it of practical value, and therefore a success. Send your suggestions to the Press.

The meeting will be held at the office of the State Secretary, 220 Market street, San Francisco, at 10 A. M., Thursday, April 11th.

Executive Committee Meetings.

The Executive Committee of the State Grange of California will convene at the office of the Secretary of the State Grange, San Francisco, at 2 P. M. Wednesday, April 10, 1889, for such business as may properly be brought before the body.

The regular semi-annual meeting occurs at the same place on Tuesday, April 2d, at 10 A. M. It is more than likely that this meeting will be brief, or adjourned to Wednesday the week following, whether a quorum is present or not. Patrons or others having business or suggestions to present for consideration are invited to submit them either in writing or orally.

W. L. OVERHISER, M. S. G. of Cal.
 A. T. DEWEY, Sec.
 San Francisco, March 18, 1889.

From Bro. S. C. Carr.

The able Master of the Wisconsin State Grange has kindly complied with our request to give the readers of our paper some items of his homeward journey after his popular and helpful visitation to some of the California Granges, writing as follows:

We left Colton, Cal., on Saturday evening, Feb. 16th. At Yuma City we had a very pleasant 20 minutes' visit with Bro. E. W. Davis, Worthy Overseer of California State Grange. We hope his health will continue to improve so he will again be able to preach good Grange doctrine to the farmers of California. At El Paso, Texas, we crossed over the Rio Grande into Paso del Norte, Mexico, and went into the old church, said to be 300 years old. The town is old and dilapidated, and looks to be 300 years behind civilization. We saw mules, jacks and jennies, in droves driven through the crooked streets, loaded down with cordwood and merchandise, strapped on each side, which looked like pictures we have seen in ancient history.

At New Orleans we visited the cotton palace and sugar refinery, 10 stories high, which has 300 employes and turns out 1000 barrels of refined sugar each day. We were told it is in the Sugar Trust ring. The mint coins 1,000,000 silver dollars each month, besides some gold. The National cemetery, six miles below New Orleans, located on the Jackson battle-ground, contains 13 acres well fenced with a brick wall. In it 12,600 soldiers of the late war are buried. Five thousand of them are unknown bones and skeletons that were picked up upon battle-fields.

We left New Orleans February 26th, and in Tennessee we saw in one field five plows running with only one mule hitched to each plow driven by a negro. We thought this quite a contrast from California farming, where at Tulare an engine, with head and side lights upon it, draws 30 plows in a gang and runs night and day, turning over 80 acres every 24 hours.

On Friday, March 1st, we arrived at our home, two miles from Milton Junction, Wis., and found all well, with a little snow on the ground, not enough for sleighing, and melting fast.

We have traveled since January 3, 1889, 8400 miles, and enjoyed the hospitality of some of the best Patrons on earth; among them are the Worthy Master and Secretary of the California State Grange. This trip we shall always remember as the brightest oasis in our life.

S. C. CARR,
 Master Wisconsin State Grange.
 Milton Junction, Wis., March 2, 1889.

Injunctions Against Hydraulicers.

Ten owners of hydraulic mines in Shasta county have been served with U. S. injunctions restraining them from placing their debris in Cottonwood and Clear creeks or their tributaries, said tributaries being tributary to the Sacramento river and its navigable waters of the U. S. A private letter to the Federal authorities first drew their attention to the threatened injury to farming and navigation. An agent was sent to Shasta and Tehama counties by U. S. District Attorney Rhodes and the complaint was filed and injunction issued as a result of this report. It is stated as follows:

The Hardscrabble mine, owned and operated by the Merchants' Exchange Bank, S. F., is one of the largest in the State and uses an enormous quantity of water. It is located about a quarter of a mile east of the town of Igo and covers 1700 acres, about 160 of which have been mined off or worked out to an average depth of 30 or 40 feet. They take water out of the north fork of the Cottonwood, through a ditch 20 miles long, owned by the bank, called the Haywood ditch, costing about \$600,000 and having a capacity of 5000 to 6000 inches. Its grade is good. There were in use, on January 16th or 17th last, three No. 4 monitors with four-inch nozzles, piping against the rocky bottom of the 60-foot bank, which was composed of sand and loam soil, mixed with gravel and boulders. About 2000 inches of water, under 100-foot pressure, run day and night. They dump into Hardscrabble canyon, which runs nearly due east about one mile, where it empties into Clear creek, which runs the same course ten miles and empties into the Sacramento river about five miles below the town of Redding. There are a number of farms along this stream, and also upon the flat sloping ridge running easterly from Igo to the Sacramento river. This ridge is called "Happy Valley." Probably it was the intention of the bank to use this water for mining when it could without hindrance, and if prevented to furnish farms with water for irrigation.

Another mine was the Reagan, situated

on the left bank of the North Cottonwood creek, about 20 miles west of and above where said creek empties into the Sacramento river, and about one mile below and east of the village of Gas Point. Said mine contains about 240 acres of land, about 50 acres of which have been washed off, from two to ten feet deep, in former years, but no mining of any consequence has been done in this section of country, the inspector thought, for the past three years. This mine is owned and worked by James Reagan. He said that he had recently purchased monitors from Nevada county. The water used in said mine is about 100 inches, under about 60 feet pressure, taken from a ditch owned by Reagan, which has a capacity of 250 inches and a length of 24 miles, taking water out of the north fork of the Cottonwood. There were four Chinamen at work in the mine, using a No. 3 monitor, with a three-inch nozzle, against a ten-foot bank composed of a light loam soil mixed with sand and small stones. They dump directly into said creek. Mr. Reagan owns reservoirs which supply his five mines (three hydraulic and two sluice mines). He is also working two similar mines about one mile above said mine. One is situated at the head of a short ravine, known as Yankee ravine, through which it dumps into said creek. His third hydraulic mine is situated one-quarter of a mile north of the last named, and dumps directly into the north fork of the Cottonwood. This mine has no monitor, but uses a canvas hose.

Five hydraulic mines are operated by Chinese. Opposite the farm of Samuel Banks, on Cottonwood creek, Jas. S. Drew, Buck Rains and Chinese are operating a mine. The report goes on to say that Cottonwood creek is an important tributary of the Sacramento river. Its source is in the Bully Chooop mountains of the Coast Range, and it drains an area of 50 miles in length and 10 or 15 miles in width. In times of flood or high water it is a stream about 600 feet wide and 15 feet deep. The lower 20 miles of the stream pass through what is called Cottonwood valley, which is from one-half to one mile in width. The deposits in the channel of said creek, for the distance of twenty miles, I think have an average depth of six to eight feet, thus in a great measure injuring and destroying the grade of the creek and causing the banks to cave or wash in, and in that manner the 20 farms lying along the track of the creek are being injured. I was informed that 150 acres of B. H. Pickett's land at the mouth of said creek [have been destroyed?] and that Richard Owens and the estate of John Barry, deceased, whose farm lies next to that of Mr. Pickett, have each lost 100 acres, and that several farms above these have lost in like manner. I am informed that about 1500 acres lying in the area of this watershed have been washed off since the year 1850 from 2 to 20 feet deep. At the mouth of said creek, on the land of said Pickett, during the winter season of last year, a deposit of mining debris, consisting of sand, gravel and small stones, the larger ones being about the size of a man's fist, was made of about one-half mile long, 200 yards wide and 15 feet deep. The grade of the creek through this valley, I think, averages three to four feet per mile, yet the lowest estimate made by several farmers along the creek places it not less than eight feet to the mile. I think, from the information I could get, that the land being mined, for the most part, is Government land.

RAINED OFF THE TRACK.—It would seem as if our correspondents this week had been "rained under" or "switched off the track," as they have failed to come to our assistance in their usual good number. Remember, fellow-Patrons, that we cannot make a good paper without your constant help, and that you can hardly do the Order as much good in a half hour's work as by writing to and exchanging ideas with your fellow-Patrons through the Grange organ. While it may not pay you immediately, or in dollars and cents, you may be sure of your reward, and something better, too, than the metallic substance, in the good time coming. We have been unusually fortunate in having so many good and able correspondents heretofore, worthy and deserving of thanks.

WORTHY OF IMITATION.—Bennett Valley Grange has already forwarded its dues and quarterly report. This was received the 19th inst., and since it is nearly two weeks ahead of time, while many Granges are liable to be that far behind, we deem it worthy of special mention. It is a great accommodation to the Secretary to have the subordinate Granges report promptly. It is business, and as the Grange is a school to teach business habits, those who are tardy are losers like pupils who waste their time in school.

Sutter and Yuba Meeting.

Butte Pomona Grange, as noticed elsewhere to-day, will hold an open meeting of Patrons at Yuba City, Saturday, March 30th, to which all farmers and their families are invited.

We are not quite sure Bro. Woodman can remain so late while visiting Yuba City next week, but if he does not, there will be no lack of other able speakers present, the names of whom we will announce in our next issue.

Read the letter of one editor who is sensible and broad enough to write a first-rate communication for his neighbor's columns. Give his Grange a rousing turnout. We will guarantee the meeting will be a good success, as all Grange enterprises have proved in that quarter of the field.

San Jose Grange.

The third and fourth degrees will be conferred on a class of 12 or more under the combined ritual for men and women, meeting at 10 A. M., Saturday, March 23d, to be followed with a Harvest Feast. Past Master S. T. Coulter of Santa Rosa has accepted an invitation from us to be present. We presume Bro. J. T. Cobb, Secretary of the Wisconsin State Grange will also attend.

San Jose has a splendid official working force, and we congratulate the Grange on the accession of so many new Patrons to their active membership. Let there be a full turnout. Such gatherings are rare ones, and we expect another good report from the Garden City.

Right Royal.

The Patrons of Husbandry of the Pacific Coast are worthy of all praise for the excellence of their Grange organs and the material and style of art displayed in their makeup. The Pacific Rural Press, Grange Edition, is 16x12, with four wide columns, closely printed and finely illustrated, on finely glazed paper, of 28 large pages, and is published weekly at \$3 a year. Then they have the California Patron and Agriculturist, similar in size, style of workmanship, art and material, both papers profusely and richly illustrated, printed with fine, new type, the latter published monthly for \$1 a year. Both papers are brim full of news of general and local interest to the Patron and farmer. Both are published at 220 Market street, San Francisco, by A. T. Dewey, Secretary of the State Grange of California.—*Grange Bulletin, Toronto, Ont., Canada.*

CHAIRMAN COOLEY of the Interstate Commerce Commission has been using some strong language relative to the matter of export rates and the methods adopted by trunk lines for their computation. Those roads which faithfully adhered to the law lost nearly all their export business through the dishonesty of rival competitors. The following is a sample of the language referred to: "The time ought to be considered as gone by when a manager can come to us and say: 'I named this rate, and I did it regardless of the law, because my competitor had done the same thing.' There is no excuse for that practice. If a wrong is done by one road to the injury of another, the proper method of redress is not to duplicate the wrong, but to go before the committee in authority, whether it be the commission or voluntary association, with a complaint of the wrong. One crime in railroad circles is no more to be excused by another than one theft is to be justified by another."

COMMITTEE OF ENTERTAINMENT.—Gov. Waterman has appointed the following Board of Commissioners to prepare for and entertain the members of the National Grange, P. of H., at their next annual session: Wm. Johnston, Courtland; G. W. Hancock, Sacramento; W. L. Overbiser, Stockton; A. T. Dewey, San Francisco; and B. F. Walton, Yuba City. This is in accordance with the Act of the Legislature for an appropriation in event of holding the National session in California.

SPRINGTIME.—It is now the season of rapid growth of crops on the Pacific Slope. Patrons, cannot you make it the same for our Order? We hope to hear of new life springing up among our Granges in all quarters. Introduce some subject for discussion at your meetings and report for the benefit of the whole circle.

The month of January is said to have witnessed a larger gain in Grange membership in this State than in any previous month in the history of our Order.—*N. H. Patriot.*

Tourists Take Temescal.

Saturday, March 16th, was a *Field* day at Temescal. Patrons from the Atlantic Coast, from the Great Lakes and from the Rocky mountains had crossed our beautiful bay to visit their Pacific brethren.

All used the same signs, pressed the hand similarly, observed identical forms, because each had stood before a common altar and above the Holy Scriptures agreed to that obligation which makes us one common family.

Two were inducted by the combined ritual into the mysteries of Cultivator and Shepherdess, and Bro. Field of Maine made good his promise and entered by dimit.

The ball was opened under the head of "Good of the Order" by Bro. D. Woodman of Michigan, who paid a glowing tribute to the beauties and resources of California. He described the various sections which he had visited, the San Joaquin valley, his trip to Bro. Overhiser's, the Mojave, his sensations at Monterey, when, already electrified by the wonders and beauties he had seen, he found that which was still more wonderful. He alluded to San Francisco, comparing it to-day with the small cluster of houses which he saw from the top of Telegraph hill but a few years ago. Nothing but his advanced age kept him from breaking his old associations in Michigan and making a new home in this beautiful land. He gave a glowing account of his Grange, which was one of the oldest in Michigan, and eulogized the Order there. Instead of having only 10 Pomona Granges as reported, there were 36, and the Governor of the State was a good working member.

The next speaker was ex-Lecturer Edwards of the Colorado State Grange, who encouraged the Patrons by relating how the Grange in the Centennial State had held together when it had become so weak that it had lost its national representation. At last its courage was rewarded, new life was infused into it, and it was flourishing. The Grange organ there was mainly instrumental in this revival. Patrons in this State should rally to the support of the Grange edition of the Rural Press if they desired the Order to prosper. He recited the vicissitudes of Capital Grange, Denver, to cheer Temescal, which, as a town Grange, labored under similar difficulties. The P. of H. was stronger to-day because it was careful in choosing members. Formerly, lawyers and others joined because they thought they could make something out of it. Town Granges needed quality, not quantity.

Judge Gibson, who had been one of the newly initiated, when called to give his first impressions, did so in a remarkably cheerful and jovial speech. What he knew of the Order came mainly from his reading, and especially the paper published by Bro. Dewey. [A practical argument showing that Patrons should support their organ.—EDS.] He did not see why a lawyer could not be a good Patron, if he were otherwise eligible. He had been born on a farm and knew what the life was. He loved trees and was fond of animals. He gave an amusing account of his early farm life in Indiana. He thought one of the chief benefits of the Grange was its social and educational features. He laughingly described the awkwardness of the old-time farmer's lad. Agriculture was ennobling. Washington retired from the Presidency to a farm. When Daniel Webster was dying at Marshfield, he ordered his oxen driven up to the window that he could gaze upon them. Henry Clay farmed it at Ashland. Douglas called his servants and said: "Without property, there is no rest; without rest, no study; without study, no advancement." These were true words. The worthy brother supposed he owed his admission to the Order on account of his "coyote farm," for coyotes were the principal crop when he went there, but by hard labor (he believed he had done more wood-cutting than Gladstone) he had set out 3000 trees and 100 varieties; thus he made good his assertion that he was not lawyer enough to hurt. Country boys foolishly rushed to the city, and farmers' daughters would rather run their chances with a lawyer's clerk than to marry a farmer. By promoting the social features the Grange could prevent this.

Bro. Field, old in years, young in ideas, said home was one of the grandest words in the English language, if rightly conducted. He felt badly to leave his down-East home, but he considered that he had another here. How should we make this a happy home? By bringing home happiness here. Bring love and we should be the happiest family in California. We want young blood. Bring your children, if they have not already joined, and he would be glad to "tend the babies" a part of the time.

Bro. Dewey, who had been responsible for so much speech-making, had to take his

turn. He was asked to give an account of himself, as he had been absent for two or three meetings. He agreed that such an unusual event needed an explanation, but, although absent from his own Grange, yet he had been engaged in the good work elsewhere. Antelope valley and Tulare had been the objects of his visit. With the exception of "out of town" absences, he had not missed many meetings for years. This was a great day for Temescal, and he rejoiced. Heretofore he had been troubled because he had been obliged to report their meetings until they knew just what he would say. To-day he would look to another to discharge that duty. Young people would readily come to the Grange when they saw such cheerful old men in it as Bro. Field. He wanted the sisters to have a chance to say something.

The sisters thought enough had been said, and voted to hold a Harvest Feast on the third Saturday in April, when the third and fourth degrees will be conferred and Eden Grange will be invited to sit around the festive board and enjoy the occasion with them.

Savings Banks for Farmers.

MESSRS. EDITORS:—The paternal European Governments that are continually exhausting their people by taxation for war purposes have hit upon a most successful scheme to gather in the money of the people, and that is a Government savings bank in almost every postoffice. The immense sums thus intrusted to the Government are great elements to bind the people to their Government, and tend to link the two together. Some Americans ardently desire to see this instrumentality for teaching lessons quite as valuable, perhaps more important, than any taught in the public schools introduced into the United States, viz.: To teach the difficult task of saving pennies and thus acquiring habits of thrift and economy, habits which when once acquired are not likely to be forgotten. But there is an opposition to the adoption of this successfully worked scheme, founded on a judicious dread of loading the Government with too many functions (especially till we have civil service reform), and this constitutes a strong argument against having the United States Government operate a savings bank. If the legitimate functions of the postoffice could be utilized by some well-digested method, without confounding the operations of the postoffice with those of a savings bank, the objection referred to would be obviated.

The British postoffice has worked a plan successfully in its postoffice savings bank department, which promotes penny savings, and which yet obviates the trouble of receiving pennies. It gives out a form on which are 12 blank spaces for sticking 12 penny postage stamps; and this form, with 12 uncanceled stamps affixed, is received as cash for 12 pence when offered for deposit. The United States Government might issue a similar form with 10 blank spaces for pasting on 10 one-cent uncanceled stamps, and when these stamps are affixed, receive them back at any postoffice and pay the face value therefor. Thus penny savings would be promoted, while avoiding the difficulty of making our Government the custodian of the savings of the people. Corporate savings banks cannot exist at every cross-road store; but with this system they might spring up in the large towns all over the country, having agents in churches, schools, etc. These agents would receive the forms described, having the 10 stamps gummed on, from the depositors, and then remit the form to the central savings bank, which would then have the stamps redeemed. If on the form there were printed a legend, "Receivable for 10 cents at — postoffice, being amount deposited by — at — in — savings bank," the amount could not easily be diverted either from the credit of the person saving the money or from the savings bank intended. An extension of the system would be to have similar forms for 10-cent stamps, which when affixed would aggregate \$1. Of course the remittances to the depositors could be made in a similar manner. If the use of this or some similar device were once conceded, the savings bank, with all its advantages for the people, and with its capacity for training the poor and the young in the essential habits of thrift and economy, would be brought, as it were, to the very doors of our people all over the land. That the people earnestly desire to save, even the very poorest among them, is illustrated by the sums deposited in the Freedman's Bank by the once despised and much maligned slave. HORACE J. SMITH.

Montreux, Switzerland, Feb. 24, 1889.

DATE OF MEETING CHANGED.—Those who wish to visit American River Grange should remember that they have changed their time of meeting, according to the Secretary, Etta Carnell, to 2 P. M. until Nov. 1.

Let Us Learn to Think.

MESSRS. EDITORS:—When we read the State Secretary's report of the meeting of March 22d at Tulare Grange, we could not help but "smile a very guilty smile," partly for our own poor failure, but mainly for the Secretary, who could so coolly report things with so little foundation. Now more than ever since that day are we convinced that we can never "speak in meeting." That these convictions were accepted with some regret, and that a few sighs were "in at the death," we will not deny. Ah! what a dreadful thing is this "grim fear" which clutches and holds us so firmly when we would be brave. But here by our own hearthstone this dread can never be, so we will try to call back some of the thoughts which went astray on that day. Legislation was the subject, and, because we really knew nothing about it, we began by picking flaws with remarks we had heard some of the brothers make (in the past, of course, for they think differently now). One had said: "We need not be spending our time in trying to tell our legislators what to do. They understand law, and know better what we need than we ourselves do." A second brother had said: "I used to be so satisfied with our legislation, having faith that those learned bodies knew and would do all that should be done for us, that I did not think it necessary to question or investigate for myself." Should we carry out the views of the first, would we not bitterly wrong those whom we send to the Capitol to work for our interest? Should they fail to accomplish what we desire, we receive them with contempt and anger, and try to kill them politically. If they are ambitious and try to rise by joining some other faction, we call them names. We are thankful that the time is fast coming when to be open to conviction and to change one's mind will mean independent thought, and therefore progress.

Of the second remark, we can only say that this "perfect faith" in party and this habit of "not thinking" for ourselves have proved the greatest curse our nation has ever had to struggle under. For the past 20 years the farmer has plowed, sowed and reaped (if there were a harvest to reap), but he has not been "thinking." The political economy of our country has been left to a few. What is the result? The present concentration of our wealth, and the opposition of that great power against the advancement of agriculture and reform, have nearly ruined us. Produce has become so low that there is rarely ever a margin left with which to improve our homes, and we are happy if we make ends meet.

Our only recourse is to borrow, but money is so dear, worth about three dollars to our one in real-estate value; so we must swamp all to get a little relief. Then the interest! Can any man pay 12 per cent and prosper? Not a farmer, surely. Has the result of giving over our political economy into the hands of party politicians been a happy one?

Cannot Hire Thinkers.

We can employ men to work for us, but not to think for us; they are sure to forget us and think for themselves. This is only human nature. Men have been sent to high places, good men when they left us. We did not instruct them, much less send with them stanch men with whom they could counsel; we did not even follow them in our thoughts in a helpful way. They were soon surrounded by temptation. In a weak moment their honor was lost, and our hopes dashed to the ground. Whose is the blame? If we place a stumbling-block in their path, shall we complain if our public servants fall?

Shall we even raise an outcry against the parasites we have been supporting so long? No, for even they have only grasped the goods laid so temptingly before them. But let us shake them off. They have sapped the nation's veins, in the last twenty years, so successfully that they do not need us longer. We know this by the present low prices for produce and dear money. It is a public announcement to us that they do not need us. What does it all mean? Only this: More money and power to the few, and to us, loss of that for which our forefathers fought and which they gave us 113 years ago, the right to belong to a Government of which each man was a part, free and equal.

Let us not become discouraged, only warned. Let us look back only long enough to gather out of the wreck of the past those first grand principles laid down for us by our forefathers, and, warped and twisted though they have become under the hands of greed and ignorance, they wait us still, fair and pure as ever.

Men and matrons! can there be a better place than in the Grange to take up these first principles? to think for ourselves? to commune together and say what laws we

should or should not have? Let no man permit another to think for him. Meet and talk—even "agree to disagree"—that out of the clashing of ideas and patient reasoning may be found the firm rock or proper basis from which to work our interest forward. Tulare, March 15. S. A. M.

Interesting from Yuba City.

Compliments from Bro. Ohleyer, Editor "Sutter Farmer."

MESSRS. EDITORS:—It is a wise old saying, "It is never too late to do good," provided, of course, the good comes before it is too late. I have been wanting to congratulate you and the Executive Committee on the new order of things in the Patron office, as well as in the Rural Press. I had set my heart on the union of the two journals and the production of a Grange and agricultural messenger not equaled in America. To my surprise, this very thing has been accomplished, and without decapitating the Patron. I really believe both are greatly improved by the change, and I doubt not both will profit thereby. True the Patron comes only once a month, but when it comes it is brim full of good things for the Patron, the Grange, the family and the State. Then in its absence comes the Rural, larger and better than ever, with all the latest farm and Grange news, once a week. Again I congratulate the committee and the Order on the happy solution of a vexatious question. It is with exultant feelings one reads the accounts of the new awakening to Grange interests in this State. Let us hope that the wave started rolling in the South will not cease until it rebounds against the foot of Mt. Shasta. There is not one solitary reason why every rural dweller should not identify himself with the Patrons of Husbandry, and seek to benefit himself and his neighbors by the contact.

An Invitation.

Seeing your suggestion in to-day's Press in relation to our coming meeting of the Butte Mountain Pomona Grange on March 30th, and the hint that we might secure the attendance of Bro. Woodman and party, we have decided to invite them through you to be with us on that occasion, and that we may be able to advertise it extensively, your own and their acceptance is desired by return mail, or not later than Wednesday, so that we can give notice in the *Farmer*. The meeting will be an open one and held under the auspices of our Pomona Grange. We shall be pleased to see yourself and all the leading Patrons present. To reach here in time, the north-bound train of the day before must be taken. There will be the Marysville and Red Bluff local or the Oregon express. We hope to take a glance at the country in the forenoon and at the hall in the afternoon. Everybody is invited to be with us on that occasion. The Committee on

The "Grangers' Picnic"

Held their first meeting this afternoon and decided to have the picnic on May 14th, the place to be designated hereafter. The committee is composed of the 14 officers of the Grange, and the meeting was very harmonious and enthusiastic, which portends a glorious time for the Northern Granger and his countless friends. Sub-committees were appointed on orator, music, grounds, privileges, entertainments and program. Some new features are to be introduced which, if carried out, will add greatly to the attractions, and of which due notice will be given the journals over which you preside.

The rain of the past week was abundant and timely, and will insure one of the biggest crops ever seen in the county. The rains of this winter are peculiar. The early rain and the late rain, being about all we have had, were almost tropical in their warmth, coming down in sheets and torrents, and were, as I heard a gentleman remark, "very wet rains." So many prayers went up for rain it reminded me of the old lady's minister who prayed for rain, and then, being caught in a heavy thunder-shower on the way home, the good woman was heard to remark, "she never knew that minister undertake anything but he overdid it."

Reaper Death.

Again do we mourn the loss of a member of Yuba City Grange. Bro. Hugh C. Jones departed this life on Wednesday morning, March 6th, after a lingering sickness. The funeral took place on the Sunday following, and was attended by a large number of sympathizing friends. Bro. Jones was a Past Master of Yuba City Grange and a member of several fraternal Orders. He was an open-hearted and generous neighbor, a kind husband and father, an enterprising and public-spirited citizen, and the agricultural interests of Sutter county were materially advanced by his genius. The profound sympathy of the entire community goes out to the bereaved wife and daughter.

GEORGE OHLEYER.

Yuba City, March 16.

The Infinite Mother.

[By JAMES G. CLARK, whose portrait appears upon another page of this issue.]

I am mother of Life and companion of God!
I move in each mote from the sun to the sod,
I brood in all darkness, I gleam in all light,
I fath' in all depth and I crown every height;
Within me the globes of the universe roll,
And through me all matter takes impress and soul.
Without me all forms into chaos would fall;
I was under, within, and around, over all,
Ere the stars of the morning in harmony sung,
Or the systems and suns from their grand arches swung.

I loved you, O earth! in those cycles profound,
When darkness unbroken encircled you round,
And the fruit of creation, the race of mankind,
Was only a dream in the Infinite Mind;
I nursed you, O earth! ere your oceans were born,
Or your mountains rejoiced in the gladness of morn,
When naked and helpless you came from the womb,
Ere the seasons had decked you with verdure and bloom,
And all that appeared of your form or your face
Was a bare, lurid ball in the vast wilds of space.

When your bosom was shaken and rent with alarms
I calmed and caressed you to sleep in my arms,
I sung o'er your pillow the song of the spheres
Till the hum of its melody soothed your fears,
And the hot flames of passion burned low in your breast.

As you lay on my heart like a maiden at rest,
When fevered, I cooled you with mist and with shower,
And kissed you with cloudlet and rainbow and flower,
Till you woke in the heavens arrayed like a queen,
In garments of purple, of gold and of green,
From fabrics of glory my fingers had spun
For the mother of nations and bride of the sun.

There was love in your face, and your bosom rose fair,
And the scent of your lilies made fragrant the air,
And your blush in the glance of your lover was rare
As you waited in the light of his warm yellow hair,
Or lay in the haze of his tropical noons,
Or slept 'neath the gaze of the passionless moons:
And I stretched out my arms from the awful unknown.

Where channels are swept by my rivers alone,
And held you secure in your young mother-days,
And sung to your offspring their lullaby lays,
While races and nations came forth from your breast,
Lived, struggled and died, and returned to their rest.

All creatures conceived at the Fountain of Cause
Are born of my travail, controlled by my laws;
I thro' in their veins and I breathe in their breath,
Combine them for effort, disperse them in death;
No form is too great or minute for my care,
No place so remote but my presence is there.
I bend in the grasses that whisper of spring,
I lean o'er the spaces to hear the stars sing,
I laugh with the infant, I roar with the sea,
I roll in the thunder, I hum with the bee.

From the center of suns to the flowers of the sod
I am shuttle and loom in the purpose of God,
The ladder of action all spirit must climb
To the clear heights of Love from the lowlands of Time.

'Tis mine to protect you, fair bride of the sun,
Till the task of the bride and the bridegroom is done;
Till the roses that crown you shall wither away,
And the bloom on your beautiful cheek shall decay;
Till the soft golden locks of your lover turn gray,
And palsy shall fall on the pulses of Day;
Till you cease to give birth to the children of men,
And your forms are absorbed in my currents again—
But your sons and your daughters, unconquered by strife,
Shall rise on my pinions and bathe in my life
While the fierce glowing splendors of suns cease to burn,
And bright constellations to vapor return,
And new ones shall rise from the graves of the old,
Shine, fade, and dissolve like a tale that is told.

Hiram Jones' First Wife.

[Written for the Rural Press by L. H.]

The sweet refined face in the photograph seemed strangely at variance with all its surroundings. For the room—indeed the whole house—oppressed one with its untasteful profusion of home-made decoration. Rag carpets of gorgeous dyes, rag rugs of every conceivable pattern, tidies knitted and crocheted, patchwork quilts, embroidered pillow-shams, picture-frames of pine-cones and peach-stones—what was there not in Mrs. Hiram Jones' well-ordered house, the house that was the pride of her heart and the envy of many of her neighbors?

"What an indefatigable woman!" was the first thought of the visitor who was shown through this museum of household industry. Does she ever rest? Are those busy hands ever folded in idleness? Needless questionings in the midst of such visible results. Only by filling every working moment with active industry of some kind had Mrs. Jones accumulated her store of treasures, and she would have scorned the idea that she had overtaxed herself in doing it.

She did not look overtaxed, the tall, robust woman who was presiding over the weekly meeting of the sewing society of the Union Church in Allentown. Distributing the work, entertaining the members of the society who were her guests for the day, looking into the kitchen where her daughters were preparing the dinner under her direction, she was evidently in her element, her loud cheery voice ringing out over all the confused murmurs of conversation clear and distinct as a general commanding his forces.

I was a stranger to most of the guests, and

securing a piece of work, I found a quiet corner where I could look on and listen without joining in the talk upon subjects of which I knew little and must honestly confess I cared less.

"The silent picture on the wall" attracted me so strongly that when the hostess came and sat down beside me for a few moments, I asked her who it was.

"Oh, that was Hiram's first wife. Pretty, wasn't she? Poor child, she only lived a few months after she was married."

Hiram's first wife! I had seen Hiram. Massive in frame, loud in voice and manner, a good-natured, hearty soul eminently fitted for the second Mrs. Jones; could it be possible that he had ever wooed and won the fair young girl whose pictured face was so strangely winning?

"I can tell you about it," said the friend who had taken me to the meeting of the society, a dear old woman who knew the history of every one in the little country town, and who rather enjoyed having a good listener. "You must not think that Hiram Jones was always like what he is to-day. Twenty years ago he was a tall, slim young fellow, handsome and smart, and a great favorite among the girls. No one of them, however, was anything more to him than all the rest till Lucy Seaton came to spend the summer with her aunt. Then he was fairly caught. She was a gentle, timid little thing, with eyes like a fawn and the sweetest voice I ever heard. Hiram fell in love with her at first sight and three months after they were married. I don't think her folks were very well pleased with the match; she had been raised in the city and did not know the first thing about country life or real work of any kind. But she was not afraid. I suppose she thought her husband would always make her a pet and plaything as her lover did, and carry her over all the rough places of life in his strong arms. So they were married."

"Hiram bought the farm where he lives now and built a little house of three rooms, and there they began housekeeping. It was all very well at first. It was early in the spring when there was not much work to be done outside; and he used to help her with all the housework. I have gone in there and found him at the wash-tub with his sleeves rolled up rubbing out the heavy pieces, or maybe on his knees scrubbing the floor as good-natured as ever, thinking it a fine joke."

"But that couldn't last. Haying-time came and then the harvest, and he was obliged to be out in the field; and very soon Lucy began to have that hunted, worn look that comes to the face of a woman whose work is beyond her strength."

"Poor child! Books and music and pretty fancy-work had been her chief employments; now they were all laid aside and it was cooking and dish-washing, sweeping and dusting from morning till night. Hiram was always kind to her. I am sure he never found fault when things were not done right, but just made the best of them. But she was very sensitive, and it was enough for her to know that she had failed in anything to make her miserable without a word of blame."

"I went one day to make a dress for her—you know I used to go out to sew in those times—and we were busy in the bedroom cutting and fitting all the morning. It got to be near noon before we noticed the time. Then she was in a great state of excitement for fear dinner would be late. 'I wouldn't mind,' she said, 'if it were not for the men; there are two of them here to-day, and I know they will think me a wretched housekeeper if I keep them waiting for their dinner.'"

"She ran into the kitchen to light the fire, and I thought I noticed the smell of burning oil, but I didn't say anything. I folded up my work and went in to help her, and we made out to have the dinner on the table in time. Hiram came in with the men and they were just sitting down when he saw the oil-can standing on the shelf by the stove."

"What's this doing here?" he said, as he took it up to put it away.

"Oh! I was filling the lamps and forgot to put it back," she answered.

"I don't know why it was, but the moment she spoke I knew she had told a lie. I did not dare to look at her, and she did not say another word while we were at dinner. I helped her to wash the dishes and went back to my work. In a few minutes she followed me; she had always made a friend of me, and now she suddenly threw herself on the floor by my side and buried her face in my lap. 'O Miss Mary!' she sobbed, 'this life is making me reckless and wicked. I lighted the fire with kerosene oil and I lied to my husband when he asked me about it.'"

"I tried to comfort her the best way I could and begged her not to run such a risk again."

"I won't if I can help it," she said, "but I'd rather take any risk than have Hiram think I am useless and unfit for a farmer's wife."

"It was only a week after that the end came. It seemed that the clock had stopped and she had not begun to get dinner, thinking it only half-past ten, when she saw the men coming in from the field. The temptation to light the fire in the quickest way she knew was too much for her. No one was there to see, but as Hiram crossed the yard he heard a sudden cry and a little figure wrapped in flames rushed from the house."

"They sent for me and I was there as soon as the doctor. Even now I don't like to think of it. He gave her a strong dose of opium and she slept. When she woke she did not suffer, and her husband thought he could keep her yet,

but I knew better; the shock had been too great."

"Just at the last she looked up at him. 'Dear, I am so sorry,' she said; 'I know it was wrong, but I was so afraid—' She waited a little; then, 'Forgive me.' The words were faint and low. I think she was not speaking to him. 'Forgive us as we forgive—' That was all."

"Poor Hiram was heart-broken for a time; but he was young and strong and busy, and so his sorrow passed. He married again two years after; and do you know, somehow when I go to his house now and see his wife and children and the changes that twenty years have made, I can't feel so sorry for Lucy that she went just when she did."

And thinking of that pictured face amid its incongruous surroundings, I could not feel sorry either.

Danville.

Politeness.

[Translated from the French of M. Boitard by PROF. GRANVILLE F. FOSTER.]

Voltaire has said, "Politeness is to the mind and heart what grace and elegance is to the face; 'tis but the pleasant and agreeable reflection of the soul's most cherished virtues."

Duclos observes that politeness is the expression or imitation of the social virtues.

Labruyere claims that the spirit of politeness when manifested in us will urge to such careful attention to words and manners on our part that all who are fortunately placed in our company will feel its influence to such a degree that they will be satisfied with us and with themselves.

To these definitions let me add one which, it seems to me, will more exactly express its true meaning. It is as follows: "Politeness is nothing more than the natural kindness and goodness of heart put into practice." With such a definition it is apparent that this virtue cannot properly be said to exist without the kindest virtues—morality and sympathy. Many persons believe that politeness is only a deceptive mask which one puts on before the world to conceal bad habits or evil passions and to make a display of virtues which are only in the seeming—never really existing; hence with them all politeness is sham, hypocrisy, dissimulation—nothing more. Believe them not; but rest assured that they speak to you with the same frankness as did the fox that had lost his tail. Such people find politeness too difficult to assume, and hence they deary it. To merit the reputation of a polished gentleman requires that one should actually be such under any and every circumstance of life; even in the private life, within the family circle—a feat too great for him to perform who is destitute of that courage which is born of the true spirit of politeness within.

Men of a selfish or spiteful nature cannot at least by exhibiting their true spirit win friends. They recognize this truth, and are, in consequence, unhappy, since isolation of heart for the most of mankind is as terrible a fate as confinement in a prison cell. Hence many men find it necessary to conceal their odious character under the amiable and seductive forms of conventional politeness! Better this than nothing, however! Let them do this without reproach, and even let me say, encourage them in it if you are in position to do so, because, though it may be true that they will commence by being hypocrites, yet, in consequence of the refining and ennobling influence of the society to which their assumed politeness will introduce them, they will finally conclude by becoming really refined themselves. The vices are contagious, so also are the virtues. It is as true in the moral as in the physical world, that goodness and badness are communicable. This is a thing proved on the testimony of the ages. The old proverb, "Tell me what company thou keepst and I will tell thee what sort of a man thou art," is universally, eternally true. Example then is contagious. It has more influence on mankind than arguments, however forcible or logical. This peculiarity of human nature becomes so marked in some individuals as to lead to results really inexplicable. I will cite one instance. Among my fellow-students at college was one, a scholar of much merit and genius. His knowledge and tact subsequently as a doctor of medicine procured for him the position of resident and practicing physician in the lunatic asylum at Charenton. Two years later I called on him, and he was eagerly hastened to show me the establishment, even to its smallest details. This he did with that old-time friendliness and ease and suavity of manner for which he had been distinguished, but nevertheless in his eyes, in his gesture and in his conversation, there appeared something extraordinary, unusual—different from anything I had noticed in him before. A year later he visited me. "I came to pay you here my first visit," said he. "For three days past have I resided in Paris."

"What! You have resigned your place?"

"Yes, and it was time I did so, I assure you, unless forsooth I wished to become insane myself. For some time previous to my resignation I noticed growing on me certain peculiar hallucinations, eccentricities of thinking which gave me warning that if I would save myself from complete insanity I must quit my work in the asylum forever."

As he noticed that the fears he expressed caused me to smile incredulously, he added: "My dear friend, let me beg you not to laugh at my ideas in this matter, for every physician who has preceded me at Charenton will confirm my statement that lunacy is a contagious disease, and most of them were obliged to quit the establishment for the very same reason that I did."

It is demonstrably true, then, that mental maladies are contagious, and since vices may be regarded as nothing more than varieties or species of insanity, do not be astonished at all when you learn of young men, well brought up at home, endowed with excellent and superior qualities of mind and heart, who have been ruined, sometimes irretrievably so, by evil associations. Empitely, however, the nobler or benevolent emotions—goodness, honesty, uprightness of life and character—are as contagious as the malevolent ones. Virtue propagates itself as well as vice. The hypocrite in manners and politeness mentioned above, subjugated, conquered by the example of those in whose company he chooses to throw himself, will end soon by becoming the character he assumes. He has placed himself where he becomes inoculated, so to speak, with the contagion of the good as once he was with the virus of the bad. Besides, the very fact that a young man chooses to put on the mask of politeness is a proof positive of the beginning of that change of heart which will end in real conversion, since he thus indicates to the world that he believes that refinement and politeness carried out in practice possess advantages over a life of coarseness and obscenity. Recollect, however, that what I say here does not apply at all to the scoundrel who assumes the air and garb of refined men for merely dishonest and ignoble ends.

It may be objected to here, perhaps, that according to my reasoning, I believe that the only good men are the polite ones. To this I simply reply, I do believe just this, but it is here necessary to distinguish between politeness and the customs of good society. True, genuine politeness is but the natural language of the heart, and every individual who possesses a refined soul must needs speak that language. Such a one may not know how to conduct himself according to conventional forms in the drawing-room. He may be ignorant of the proprieties of fashionable society—sitting ungracefully in his chair, or gnawing boorishly his bread at the table. He may appear awkward, timid, embarrassed, but you will never hear him say or do anything which will wound the feelings of others or injure their character or reputation. You will ever find him attentive to do what he can to please others or to add to their happiness and prosperity. He will not courteously to everybody, and will especially be self-sacrificing for and devoted to his friends. Here is the rough jewel—the politeness of soul. Give to such a man an education and a knowledge of the usages of fashionable society, and he is converted at once into a polished gentleman.

The usages of good or fashionable society, it is true, demand politeness, or at least presume it, but they embrace more especially certain delicate points of etiquette, purely conventional, which were first established to maintain the hierarchy of rank and afterward continued to make more pleasant and agreeable the association of man with man.

True politeness is not confined to any period or country since it is established on an immutable basis—the human heart. It is, so to speak, the thermometer of all past and present civilizations. The usages of society, on the contrary, vary from age to age, and among different nations in the same age, since they are merely conventional forms—agreed modes of procedure on the part of those who are the leaders in society.

Grass Valley, Cal., March 12, 1889.

"The Schoolmaster is Abroad in the Land."

The friends of New Mexico will be glad to see any aspersions upon the educational element in the Territory properly resented and refuted in the following letter to the Kansas City Journal:

In to days Journal you say that New Mexico legislatur has passed a law requiring school teachers to be able to read and write.

Sir, I pronounce above statement a cold-blooded snedagerous lie and I hold myself PERSONALLY RESPONSIBLE for this.

I am myself a school teacher in Albuquerque New Mexico and I have nothing to be ashamed of except that I can get my claws on such lies as above for as god is my judge I would make them understand that there is one school teacher in that territory ready to spill his harts blood in her deafens.

New Mexico dont have to pas such a law, most of her teachers are fine scholars, graduates of Missouri and other eastern colleges and capabell of filling any office in the gift of that noble and freedom loving people. New Mexico is as much above her trayduers as the starrin heavens are above the mudsill of damnation.

I shal be at Adams house for three days ready to answer any calls on me. With due respect I subscribe myself

M. MARTIN FOUNTAIN.

Adams House, Feb. 1.

A YOUNGSTER sat watching his mother while she "pitted" cherries. She inadvertently passed one without removing the stone. Hopeful immediately picked it up, with the remark, "Here's one you didn't unbutton, mamma."

The Low Neck and Short Sleeve Missionary.

[Written for the Rural Press by ASENATH C. COOLIDGE.]

It happened at a railroad station. There was a woman with three children and a dog. The little girl was eating jelly and bread and butter instead of bread and butter and jelly. The little boy was eating mince pie out of his right hand and a hunk of meat out of his left. The dog was nosing around in the lunch-basket helping himself to what he liked best. The mother was giving the baby, who had just recovered from an overdose of lactal fluid, the highest kind of a dandle. They were a festive-looking set and the baby looked the most festive of all. It was dressed in low neck and short sleeves and had its corals all on as though it might be going to a party. Its neck and arms were just as fat and white as any other baby's neck and arms, but the mother said no less than a dozen times in five minutes that no other baby ever had such "t'weet neck and arms."

No knowing how many times more she would have said it had it not been for a woman of an entirely different pattern, who sat in the other end of the depot. She was alone. She didn't have so much as a bag or an umbrella to distract her. She was not at all festive looking. She was more the "Ash Wednesday" style. Her face was ash-gray and thin. Her hair was thin and ash-gray with black stripes. Her eyes were ash-gray on a yellow-white ground. Her dress was ash-gray from bonnet to shoe; she hadn't an ounce of superfluous flesh on her bones nor more than two ounces of superfluous clothes on them. She looked at the mother rivet-fashion and the mother looked at her off and on and smiled and smacked the baby's "t'weetness" at every downward dandle; but the gray woman never smiled back again a solitary time. A woman who has accepted a mission and hasn't found anything in it to smile at, seldom smiles back at anybody.

Instead of smiling back she arose and pinned her gray shawl as high up around her neck as she could get it, and then marched solemnly over to the festive group. When she arrived there she halted sharply in front of the mother and said:

"Hain' chew feard yewr bebb'y'l ketch a dethly cold in them low-neck an' short sleeves? I feel purty middlin' chilly with my warm shawl doubled an' thrilled over all my other thicknesses."

"Oh, no ma'am," replied the mother, "he's use' t'it. His little frocks ar' all made this way."

"But yew needn't hev 'em made that way tew start with. It don't look well tew take a yung'un frum hum in that necked shape, an' 'tain't a-settin' a good 'sample tew the risin' generation ef I know anything 'bout 'samples. Es the twig's bent the tree's inclined, an' ef mothers incline thur little twigs tew low necks, no knowin' whair the incline il' fetch up. Besides, 'tain't prudent fur thur belths. Yew can't stop uther foaks' drafts, least of all the railroads; an' my solem advise tew yew is tew put a yoke tew that yung'un's frock an' set in sum long sleeves afore yew go forth with it agin."

"Oh, but it looks so pretty with its little soft white neck and chubby arms," said the mother, giving it another heavy smack and rubbing it in with her nose.

The woman in gray drew herself up in a military attitude. Her eyes shone like a pair of percussion caps. Her forefinger was raised as though pulling an imaginary trigger. Her mouth opened and off went the words:

"Poor foolish keerles mother! I reckon yewr poor dud ef a yung'un won't look quite so purty tew yew when thur ain't nothin' left of it but its little cold corpse. There! It's a-sneezin' a'ready!"

The dog yelped, the jelly-faced little girl cried, the pie-faced boy dropped his pie and stared, the mother hustled on the baby's cloak in wild alarm and the gray woman marched back to her seat muttering to herself:

"I skeert'er enyhow, an' I reckon thet's the next door tew conviction. The cold corpse argment ain't a bad un fur muthers o' low-necked bebb'y's, tho't don't take with them low-necked surciety things."

MOVING A HOLE.—Before the plaza that is in the midst of the town of Lagos was set in order as it now is, there was in the middle of it a deep and wide hole. And this hole caused the Town Council (*Ayuntamiento*) much concern, for they perceived that it was a dangerous place, into which the unwary might fall and be killed or maimed. So a meeting of the Council was called, and it was decided that the hole should be filled. And to get earth to fill it a hole was dug beside it. And behold, when it was full there was a new hole as deep and as wide as that which was filled. Then in the same way did they set about filling the new hole, and again was the same result, only now the hole no longer was in the middle of the plaza, but over at the side of it in the street that goes out toward the north. And again they filled it, and so continued until at last the hole was far out in the northern suburb of the town. And there they suffered the hole to remain, for there it did no harm.—*Scribner's for March.*

LITTLE FREDDIE was awe-struck when the hotel waiter announced for dessert "apple-pie, plum-pudding, and baked Indian."

YOUNG FOLKS' COLUMN.

Baby's Hand.

[Written for the Rural Press by S. P. SNOW.]

The baby's hand is a wonderful hand; Most wonderful thing in all the land; It is velvety, soft and sweet and delicious, Too wee just now to wash up the dishes. But no matter now, the time is coming When 'twill set the knives, dishes and dinner-plates humming; It will knit garters and hose; make bonnets and dresses; Cook cabbage and turnips; make all sorts of messes; It will milk the cows and peel the potatoes; Will gather the peas and pick the tomatoes; It will make up the beds and clean up the house, And do it all soft and still as a mouse.

It will comb the head of its dear papa; It will braid up the hair of its sweet mamma; It will sweep and fix up and clean and adjust, And assort and arrange and replace and dust, And all things else to make the home sweet; Oh, the wonderful hand is perfect, complete.

O the wonderful hand! so cunning, so cute; It will play the guitar and the lyre and the lute; It will play on the harp-strings of man, no doubt; Though the knaves and the duds it will silently scout.

The wants of the poor it will haste to relieve; 'Twill always be ready, should any one grieve.

O the wonderful hand! the beautiful hand! Most wonderful thing in all the land. The slim little fingers, all dimples, and red As the set of the sun when its splendor is shed, Are moving about in incessant motion, As if seeking for labor with constant devotion. The lily-white nails and the cute little thumb, Oh, indeed, I must stop, I am mute, I am dumb; I can go on no farther, so great my emotion Rolls over my soul, like waves o'er the ocean.

O the wonderful hand! the beautiful thing! To all it will pleasure and happiness bring. God bless the sweet hand, the dear little treasure, And the darling babe, too, without stint, without measure.

Santa Barbara.

The Fishing Party.

[Written for Our Young Folks by ERSKIN DE LAMATER.]

One sunny June day some of the boys of a country village were trying to get up a fishing party, and at last they got five who promised to go. Each one was to put in seventy-five cents to get a livery team. The livery team would be two dollars. They did not know how much it would cost for putting their horses in the barn and having them fed. The amount they had over would be one dollar and seventy-five cents. Each put in his share. They were to start the next Saturday at seven o'clock in the morning, as they had to go eighteen miles. The next Saturday, bright and early, every one was there ready to start. The buggy was pulled out from the wagon-shed and the team hitched on to it. The boys started off. They rode through the woods laughing and joking. At last they reached the lake and they could see the row boats and sail boats sailing about on the lake. They thought what a jolly time they would have and bring back a buggy-load of fish.

When they reached the town on the lake it was dinner-time. First they went to the hotel in the town. The man also kept a livery stable and had their horses put up. After dinner they went to the store; each one bought a good bamboo fishing-rod, a good line and two dozen small-sized fish-hooks. Next they secured a boat; then putting their poles, lines and hooks in, they started off, the strongest taking the oars. When they got out near an island in deep water they fastened their lines to their poles, then put the corks on and then came the sinkers and hooks and an angle worm for bait. One after another caught a fish, when one of the boys got a big one on his line and giving a jerk upset the boat, every one going to the bottom. When they arose, the boat was too far off to be reached. The water was rather cool, but they had to swim for life to the island. When they reached the island every one was all wet and no one had a match to build a fire with and dry their clothes or even get warm. All this time they were not thinking of the horses in the livery stable.

In a short time they saw a boat approaching the island. One of the boys got up in a tree and hailed it with his hat to come to their relief. The boat immediately steered for the land. Just as soon as the boat struck land all the boys but one jumped into it. Just as he was getting in, the boat tipped and let them all out, so they had to stay there all night. They slept on some leaves that night, and in the morning, to their surprise, on walking around the island they found one of the boats had drifted back with both oars in. They all got into it and rowed back to the land. When they got to the livery stable where the horses were, they found they had no money. They knew a man in town, so they went to him and told him all about it, so he lent them enough to get home on, and when they got home they sent back as much again money as he had lent them.

Newcastle, Cal.

[This is certainly a "harrowin' tale." We hope our young friends learned wisdom from their thrilling experiences.—EDS. PRESS.]

Edison's Talking Doll.

A talking doll is Thomas A. Edison's latest invention. In his laboratory at Orange, N. J., there are numbers of dolls that speak quite naturally. "Dollphones" is what he calls them. They are not like the old-fashioned kind that say "Mamma" when pressed in the diaphragm, but they repeat long sentences and talk with ease. Mr. Edison has been working at the invention two years, and only lately completed it. It is so constructed that phonograph cylinders are interchangeable, and new sets of sentences may frequently be introduced into the toy's talking machine. This is a little phonograph, with a clockwork accompaniment, which is placed in the doll's back.

Mr. Edison showed a number of the "doll-phones" to a reporter to-day. Some of them were dressed and ready to entertain company; while others, while they could speak, did so, strange to say, without the use of their heads. Mr. Edison picked up one of the dolls, whose golden, curly hair and pink cheeks were lovely in their perfection, and whose light blue eyes stared in mild surprise at the reporter, and winding her up by inserting a clock key in the small of her back, handed her to the reporter. He then pressed a spring, and the doll, still looking at the reporter, said in a plaintive tone:

"I love you, mamma; I love you dearly, mamma, but I am tired and sleepy now. Please put me in my little bed."

The doll continued to stare with the widest of wide-open eyes at the reporter while asserting the fact that she was sleepy, but the distinctness with which she said it and the guileless expression of her pretty face convinced him that she was telling him the truth, so he laid her gently down on the table near by.

Then Mr. Edison wound up a brunette doll, with jet-black curls and sparkling brown eyes. The doll started off at a brisk rate with the following:

Twinkle, twinkle, little star,
How I wonder what you are,
Up above the world so high,
Like a diamond in the sky.

Another doll-baby sang, in a sweet, childish treble, "Rock-a-bye Baby on the Tree Top" all the way through with good expression and without a false note. She sang it quite loudly, too, so that any one could have heard her across a moderate-sized room. Still another sang a pretty little German song.—*Chicago Tribune.*

GOOD HEALTH.

Health of the State.

The monthly circular of the State Board of Health for February has been received. From it we learn that mortality reports have been received from 67 localities with an estimated population of 665,700. The total number of deaths reported were 859, which gives an annual death rate of 15.48, which is an unusually small percentage for the season of the year, and indicates the absence of any epidemic disease upon the coast. Among diseases which have caused the greatest number of deaths are consumption, which is credited with 165; pneumonia, 92; heart diseases, 61; various diseases of the stomach, 38; diphtheria, 32; while cancer, the fourth on the list, is credited with 26. The large death rate from this disease is no doubt largely due to the persistent use of the knife instead of constitutional treatment. Bronchitis was fatal in 22 instances. All the deaths from this malady, with but one exception, occurred in the coast counties.

But four deaths are noted from cholera infantum; but as spring advances, a large increase from this disease is expected. It is very properly stated that when mothers become more familiar with household hygiene, we may hope to see this affection disappear from our list of prevailing diseases.

In cases of diphtheria the importance of thorough isolation is strongly urged. It should be borne in mind that this disease is almost as contagious as smallpox and twice or three times as fatal. Too much care cannot be taken in confining cases within as narrow a limit as possible.

TREATMENT OF DIPHTHERIA.—Much care and promptness is necessary in the treatment of diphtheria. A writer in *Science News* says: The local treatment of diphtheria by spray of solution of sulphate of calcium is recommended by Dr. George E. Hubbard, New York. The solution is prepared as follows: Take of lime, 1 part; sulphur, 2 parts; water, 20 parts. Slake the lime with some of the water, then add the remainder and the sulphur. Boil to 12 parts and filter. Under the use of this solution, in spray, even sparingly applied, the diphtheritic patches undergo a change in a few hours. The temperature soon subsides, and a general improvement in the condition soon follows. In some cases the patches disappear entirely in a day. If the false membrane has developed rapidly before the physician has seen the patient, this spray will even then be effectual in arresting systemic poisoning, and soon the tough membrane will become detached. Do not, by any means, allow the patient to swallow any portion of the false membrane. By gentle manipulations it can be removed without causing any irritation. In cases of very young children it may be best to add a little water to

the solution, at first, until we are satisfied that it does not irritate the tender mucus membrane. The doctor also thoroughly fumigates the apartments with sulphur, and administers such medicine as may be indicated. The principal thing to do is to destroy the disease germs as early as possible, and he believes the solution under consideration does much toward preventing constitutional infection as it is taken into the patient's stomach. Its stimulative, laxative, and somewhat diuretic action are quite marked.

THAT ACHE IN THE BACK.—An Albany physician, says a cotemporary, declares that Americans suffer more generally from Bright's disease and nervous disease than any other people, and he says that the reason is that Americans sit down so persistently at their work. He says: "Americans are the greatest sitters I ever knew. While Englishmen, Germans and Frenchmen walk and exercise, an American business man will go to his office, take his seat in his chair and sit there all day without giving any relief to the tension of the muscles of the back. The result is that these muscles surrounding the kidneys become soft and flabby. They lose their vitality. The kidneys themselves soon become weak and debilitated. If Americans would exercise more, if they would stand at their desks rather than sit, we would hear less of Bright's disease. I knew of a New York man who had suffered for some years from nervous prostration until it was recommended to him that he have a desk at which he could stand to do his work. Within a year he was one of the healthiest men you ever saw. His dyspepsia and kidney trouble had disappeared, and he had an appetite like a paver."

DOMESTIC ECONOMY.

SALAD DRESSING.—Two eggs, one tablespoon of butter, eight tablespoons of vinegar, one-half teaspoon of mustard; put into a bowl over boiling water and stir until it is like cream; salt and pepper to taste.

SILVER CAKE.—One and one-half cups of sugar, one-half cup of butter and cornstarch, 1½ cups of flour, one-half cup of sweet milk, the whites of six eggs and two teaspoonfuls of baking powder; flavor with one teaspoonful of lemon and one-half teaspoonful of vanilla.

SOUP BALLS.—Boil five eggs until hard; remove the shells and pound the yolks into powdered. Add the whites of two uncooked eggs, with a little flour and salt. Mix into balls, boil and drop into the soup.

OYSTER OMELET.—Beat six eggs to a light froth. Add half a cup of cream, salt and pepper. Pour into a frying-pan, with a tablespoonful of butter, and drop in a dozen large oysters. Fry a light brown. Double over and send to the table immediately.

GINGER COOKIES.—Two cups molasses, one cup brown sugar, one egg, teaspoonful ginger or cinnamon, as you prefer; two teaspoonfuls soda dissolved in hot water just enough to dissolve it nicely; after everything is in and stirred thoroughly, add one tablespoonful of vinegar. Stir well and put in flour as for any cookies.

POTATOES WITH CHEESE.—Cut six cold potatoes into dice. Make a sauce by melting two tablespoonfuls of butter; add two tablespoonfuls of flour and pour on slowly one cupful of white stock and one cupful of milk; season with salt and pepper and add four heaped tablespoonfuls of grated cheese. Put a layer of potato into a baking tin, and cover with sauce, and so continue until all is used. Sprinkle with buttered crumbs, and brown in the oven.

ORANGE FLOAT.—One quart of water, the juice and pulp of two lemons, one coffee-cup sugar. When boiling hot, add four tablespoons cornstarch. Let boil 15 minutes, stirring all the time. When cold, pour it over four or five oranges that have been sliced into a glass dish, and over the top spread the beaten whites of three eggs, sweetened and flavored with vanilla.

BREAD OMELET.—To a large teacupful of bread crumbs add a teacup of cream or rich milk, a dessertspoonful of butter, salt and pepper to suit taste; also a little nutmeg; when the bread crumbs have absorbed all the cream, add three well-beaten eggs and fry in butter. This omelet makes a good dessert, with the addition of a rich sauce.

LEMON WATER ICE.—The juice of two lemons, two tablespoonfuls of the extract of lemon, one quart of water, one pound of granulated sugar and one gill of rich, sweet cream. Mix all well together, strain and freeze, the same as ice cream. Orange water ice is made in the same way, using oranges.

APPLES IN BATTER.—Peel four or five good apples, cut them like the quarters of an orange, remove the cores, and lay them in a deep dish, dissolve two ounces of castor sugar in a tablespoonful of rum (and a little water if necessary), and pour it over them; leave them to soak for an hour or two, frequently moistening them with the syrup; make a batter with one ounce of fine flour, half-ounce of sugar, quarter-pint of white wine and the well-whisked white of one egg; dip the apples into it, and put them in a baking dish with some boiling dripping; bake them a nice pale yellow, then drain them on blotting paper, pile them in a dish, strew them with sugar and powdered cinnamon, and serve hot.

The Week.

The rain clouds which had dropped so copious blessings on California lands a week ago have been blowing hither and thither over the State with recurring down-pours until the thirstiest fields cry: "Hold! Enough!" and welcome the warm sunshine of this Wednesday afternoon. Orchardists whose trees were coming into bloom when the storm struck them think that the falling off of many blossoms beneath the pluvial pelting will save them much trouble of thinning later in the season, and are doubly grateful for the showers.

Another thing for which the people of this State have reason to be thankful is the fact

that the twenty-eighth session of the Legislature has adjourned *sine die*. It is humiliating to feel that the scathing comments upon the character and conduct of our law-makers, quoted on another page, are mainly just; but signs are not wanting that the abuses of bossism are becoming so intolerable that honest and industrious citizens will ere long rise up in concerted and effectual revolt against the tyranny of organized vice and crime, recover the reins of government and place them in more patriotic and trustworthy hands.

An Enemy of the Wheat Plant.

Specimens were received at the Agricultural Experiment Station of the State University on Saturday last, which indicate that an enemy of the wheat plant in distant parts is also to be feared in some portions at least of California. The specimens were from Healdsburg, and were accompanied by a note stating that the farmer claimed that there were 50 to the square inch and that they were eating the grain off clean. The statement as to numbers was clearly an exaggeration, but there were doubtless enough of them to accomplish the result described. The pests were identified by Mr. Wickson as larvae of a tipulid fly—a large mosquito-like insect (though many times larger than a mosquito) which the children call "daddy long-legs." They may be roughly described as follows: Footless, cylindrical grubs about an inch long and a shade more than an eighth of an inch in diameter, of a dark-grayish color with faint lines running lengthwise of the grub; the rear end apparently not squarely off, and with four pointed projections from the last segment, and (as seen with a magnifier) tubercular or warty excrescences also on the last segment; the front end tapering slightly to the head, which is indistinct because nearly inclosed within the skin of the first segment, and on the head two short, brownish spines. The grub has a tough, leathery skin.

The larvae of tipulid flies, or crane flies as they are sometimes called, have different abodes and food. Some feed on rotten wood, some on fungi; some are aquatic and others live on roots of grass and grain. It is one of the latter which has been found in Sonoma county, and, so far as could be judged from the larvae, the insect is identical or very similar to the *tipula oleracea*, which is known to injure grain crops in the Eastern States and in England. These larvae usually do most harm in moist places, and in low-lying meadows often kill out much grass. The present instance is, we believe, the first time they have been reported as a grain pest in this State, although many species have long been known to exist here. Baron Osten-Sacken in his report on the Western Diptera speaks of 35 species of *tipulide* as having been collected in this State. It is to be inferred that most injury here, as elsewhere, will be found on low moist land, and probably that the coast region north of the bay will furnish most species because of its more prevalent moisture. On the whole, for the same reason, the tipulid larvae are more injurious in England than in the Eastern States, and probably in most parts of California can never rise to the dignity of a pest because of prevailing aridity of soil.

The methods employed to destroy the injurious larvae are several. Light applications of common salt or of nitrate of soda are said to destroy them; the latter also an invigorating fertilizer for the grain or grass. Of course in applying common salt the scattering must be light or the grain would suffer. In colder climates the pests are measurably destroyed by rolling when the ground is frosty, thus crushing the insects. Another method which is effective is to plow deeply, turning the grubs under a good weight of soil whence they cannot escape. Probably this last would be the most effective and practicable treatment to adopt in California, when the pests become abundant enough to injure the wheat so that the yield would not be worth gathering. In such a case the crop would be destroyed any way, and clearing the ground of the grubs and re-sowing, or, if too late in the season, following with a summer crop in due time, would be the best procedure.

We shall be glad to have specimens of insects found injuring grain or grass crops. Now that the fruit-growers have all their bugs killed, it will be well to hold post-mortems also on pests of other crops.

How Roads Are Made in Santa Clara County.

Many of the counties of California should make immediate and adequate efforts to secure better roads. Probably this fact will press itself home upon the attention of our readers who have been required to travel to and from their market towns since the recent glorious rain. The same facts will enforce themselves again next summer, when the sea of bottomless mud is transformed into a desert of deep dust begemmed with chuck-holes. The way some counties neglect the making of proper highways is reprehensible. They are not the poor, undeveloped counties, either, but some of the richest in the State. Even in some fruit regions, where development has progressed farthest and the hauling of tender produce would seem to demand the finest roadways, the very worst in the State are to be found. There is even land valued at \$300 to \$1000 per acre which is situated alongside of a slough in winter and a dust mine in summer. Both good repute among visitors and actual hard profit to resident fruit-producers demand better roads.

Some localities are better situated than others to secure good roads cheaply because road-making materials are handier in some regions than others, and yet something should be done even where rock and gravel are most expensive. Santa Clara county has the reputation of being one of the counties having the best roads and keeping them in the best condition, and it will no doubt be both interesting and instructive to our readers to know how Santa Clara county roads are made and cared for. The Marysville *Appeal* recently secured from W. O. Watson, one of the supervisors of Santa Clara county, a statement of the way his county's roads are improved, from which we quote as follows:

Public roads in this county run over all classes of soil—clay, sandy loam, adobe, gravel, red loam—all needing a different treatment as to grade, amount of gravel or macadam and drainage. The general method used here, in making new roads, is to grade the road first, and for that purpose we use three kinds of scrapers. For filling up large holes or very uneven places, we use the common two-horse scraper in general use; also the late improved two-horse scraper that runs on wheels, which for heavy grading is economical and a great improvement over the common ones.

After the road has been graded with the above-named scrapers, we then plow the sides of the road, turning as many furrows as are needed to make the necessary grade. We then take the large road-grader (McCall pattern), using ten horses, and throw the sides, already plowed for that purpose, to the center, making, when finished, a complete grade smooth and uniform in character.

When the road is completely graded, as above described, it is then ready to receive the gravel or macadam, as the case may be. The usual amount of gravel or macadam used on new roads is about four cubic yards to the rod. The cost of grading and graveling roads depends largely upon the character of the soil over which the road runs, and the distance the gravel has to be hauled to cover the same. This county is well supplied with gravel, within convenient distances to nearly all of our roads. Our experience is that no soil except gravelly soil will make a good road that will stand much travel without being well graveled or covered with macadam. In some of our main avenues where converging roads center a great amount of travel, nothing but good trap rock, broken to proper size, will stand the traffic.

In the past few years our county has entered upon a system of sprinkling the public roads, where water can be obtained conveniently, which greatly improves the roads and at the same time makes them very pleasant to public travel. This system of watering the roads in the dusty season is somewhat more expensive than not to water at all, but the pleasure and convenience is so great to the traveling public that the taxpayers do not object to the greater expense. This county spends annually on the public roads \$80,000.

These statements will be found of wide value. Of course local methods will depend upon local conditions. The general principle is to do something effective, and to do it before the State gets much older.

CREAMERIES.—There is much talk now about building creameries in California. Those interested in the subject will find upon another page a timely letter by Col. R. P. McGlinchy of San Jose, who has already been introduced to our readers as a gentleman of wide experience in the dairy affairs of the great Central States of the Union.

THE State Legislature this year appropriated \$12,534,000 of public money, as compared with \$9,839,000 last session.

Honors Declined.

We are pleased because of the incident gain to California agriculture to announce that Prof. Hilgard, Director of the University Agricultural Experiment Stations, has declined the Assistant Secretaryship of Agriculture at Washington, which had been offered to him. It would be very desirable on some accounts for California to have in the national agricultural councils a representative so well informed on her industrial conditions and possibilities, but it would be at too great a local loss that such representation in the person of Prof. Hilgard could be secured. This view of the matter seems to have been taken by the Board of Regents, for when the chance of Prof. Hilgard's withdrawal was presented to them they made arrangements for the pursuit of his California work so satisfactory that he decided to remain at his post in this State. His declination of the pressing invitation to take a governmental position at Washington will be appreciated by Californians.

Colony Frauds.

Tehama county papers are indignant at the swindling wrought by the self-styled "California and Southern Land Trust Co.," which has been flooding the East with delusive circulars about a "Wilber Colony" tract, represented to be within ten minutes' walk of Red Bluff, but actually eight or ten miles distant.

The effect of these sharpers' advertising has been seen in thousands of letters, addressed to the concern, which have been received at the Red Bluff postoffice; and about the first of this month there arrived from Rock Island, Illinois, two Germans—Henry Flugel and Wolfgang Akarman—holding trust-deeds to lots in the bogus town of Wilber, and also for tracts of land in that immediate vicinity. They represented 28 other Germans at Rock Island who have paid the "C. & S. L. T. Co." of Cincinnati, Ohio, about \$3000 for numbered lots in this same Wilber Colony. Messrs. Flugel & Akarman came on to take charge of the land purchased and to make preparations for the rest who were to follow. They expected to find a thriving settlement on the tract, and were sadly taken aback when they learned that there were no settlers nor improved lands thereabouts. They had but \$6 left between them, and there was no one to whom they could look for redress, the fellow who had conducted the local office having left town two or three weeks before.

The *People's Cause* says: "The fraud becomes more apparent every day, and the intentions of the company are clearly nothing more than to impose upon credulous people in the most shameful manner;" and the *Sentine* remarks that the sooner the committee of the Board of Trade investigates and reports upon this scheme the better it will be for poor men in the East who are seeking homes in California.

NEW YORK DAIRYMEN.—We are gratified to see that our dairy associates in the old Empire State are pursuing dairy problems with all the freshness and vigor which characterized their assemblages when we knew them 15 years ago. The last report of the New York Dairymen's Association, which we have just received from the secretary, Hon. Josiah Shull of Ilion, N. Y., is full of interest to all engaged in dairy work, and is a credit to the society issuing it. Our California dairymen would find it well worth the cost and trouble to secure these Eastern reports. Although some practices are necessarily different here, there is much in Eastern dairy experience which is suggestive and valuable. The annual membership fee in the New York association is \$1, and all members are furnished with the published reports. Until we get such an association in this State, our dairymen should join some good Eastern society, and Mr. Shull will no doubt be glad to enroll a large California membership.

PERSONAL.—We had the pleasure of a brief visit last week from Prof. F. M. Webster of Purdue University, La Fayette, Indiana, and special agent of the U. S. Division of Entomology. Prof. Webster only made a flying visit to the State, and will, we trust, soon take occasion for a longer sojourn among us.

CONTRA COSTA county pays a bounty of \$2.50 for the scalp of every coyote killed within its borders.

A Large Rabbit Trap.

[Written for the Rural Press by MIRAMONTE.]

In accordance with your request, I beg to hand you herewith a rough sketch of what, though not strictly speaking, an automatic rabbit corral, is one, in so far that it does its own work.

This corral is to be used in connection with the fence of which a description with engravings was published in the Rural of Feb. 9th.

In this sketch Fig. 1 shows this fence with the corral in position near it; A is a piece of netting to which reference will be made hereafter; B is the barbed wire of the main fence; C is the netting of the main fence; E, the posts of the main fence; F, small posts of the main fence; G, barbed wire of the corral; H, netting of the corral; I, posts of the corral; J J, posts at the opening of the corral; K, the wire on these posts, which will be described hereafter.

Fig. 2 shows an elevation of these posts J, with the wires K stapled on by two staples.

Any one who has lived in a rabbit country where there is a fence must have noticed that around the outside of this fence is a well-worn path made by the rabbits going around the fence and trying to find a place through which to get in.

This path is also shown and it is on account of this peculiarity of the rabbit that I expect the corral to be a success. It will be noticed that coming in either direction the rabbit finds an opening between the wires on the posts J and the main fence, through which he will naturally pass on his journey around the main fence. Once in, any attempt at passing out through the opening by which he entered, would be prevented by the ends of the wires catching him, and the more he tried to force past them the tighter they would crowd him against the fence, on the principle of those rat traps that will let a rat squeeze through to get in but will not allow him to get out. The thickness, length and closeness to the main fence of these wires K must be a matter of ex-

main fence is on the inside and the barbed wire is on the outside, in the corral it is the reverse, and, for the obvious reason that one is intended to keep the rabbits out, and the other is intended to keep them in. If a third wire be used, however, I should think it would be better placed on the top at the outside, thus helping to fence the cattle off from the netting.

Fig. 1.

A RABBIT-TRAPPING CORRAL PROPOSED FOR TRIAL IN KERN COUNTY.

I have not tried this corral yet, but feel quite confident that it will work. Meantime, should be greatly pleased if any of your readers will set one up and try it, and report results. If it has no other, it has the two merits of being cheap and no trouble to take care of.

A Pretty Scene in Placer County.

We give herewith a glimpse at one of the natural beauties of Placer county—a beautiful meadow studded with white and live oaks so full of grace and beauty that the eye loves to dwell upon them. The scene is a part of the lands of Clover Valley Park, evidently well named, as the engraving shows. Clover Valley Park is a portion of the lands now being improved by the Placer County Citrus Colony, an enterprise in the hands of some of the leading citizens of Placer county, under the presidency of James G. Whitney of Rocklin. The lands are situated in the lower foothills extending along the Central Pacific railroad from Rocklin to a short distance below Newcastle.

The colony comprises at the present time

Death of Dr. S. F. Chapin.

Many readers of the Rural will be pained to hear of the death of Dr. S. F. Chapin, who was for several years prominent in fruit-growers' meetings and widely known through his work as member of the State Board of Horticulture and State Inspector of Fruit Pests. The manner of his deeply regretted death and the story of his life are told by the Auburn Herald as follows:

As to how the fatality occurred, no one knows. As far as is now known, there were no eye-witnesses to the accident. It is conjectured, however, that while returning from a professional visit to the family of John Hutchinson, near Ophir, the doctor attempted to cross Auburn ravine, which had become swollen by the rains and was running swift and deep, and the buggy had overturned, and the occupant was thrown out and drowned.

Dr. Chapin was born in Michigan, March 12, 1839. His father dying when he was six years of age, the family moved back to Massachusetts. He was graduated from the College of Physicians and Surgeons in New York City in 1863, and served for a portion of the war as Assistant Surgeon under Sheridan. His health failing, he came to California, arriving in Auburn March 12, 1866. In 1866 he was married in San Francisco to Miss Maria Endicott. In 1878 the doctor removed to San Jose, where he resided till 1885. The following year was passed in Los Angeles. During the years 1887 and 1888 the family resided at Auburn and Los Angeles. While living at San Jose he was appointed Chief Horticultural Officer for the State, and assisted very materially in disseminating a knowledge of entomology among the fruit-growers of California. Doctor Chapin ranked very high in his profession, being eminent both as a physician and surgeon. He was generous with his means and liberal to an extreme in all things, and enjoyed to the fullest extent the respect and confidence of the community. He leaves a widow, one son and three daughters.

THE STATE BOARD OF TRADE rooms, under the Grand hotel, present some varying attractions from week to week, besides the more lasting exhibits, which altogether render these headquarters interesting alike to Eastern visitors and our own people. The windows on

VIEW IN CLOVER VALLEY PARK, NEAR ROCKLIN, CAL.

periment. I should say, however, that by no means must the ends of these wires be made sharp, as it is well known that if a rabbit's blood gets on to any substance, other rabbits will avoid that spot, as they have a great repugnance to the smell of blood. Therefore these points should not be sharp enough to stick into the rabbit, but only rounding enough to catch him and hold him.

You will notice that while the netting of the

I beg to call your attention to the line between the barbed wire of the main fence and the corral. This is intended to represent a piece of netting placed for the purpose of keeping the rabbit away from the barbed wire. As he begins to get into the narrow space, it will not do to discourage him by anything of that kind until he gets way in. For that reason I recommend a short piece of netting to be placed in that position.

The colony is incorporated under the laws of the State with a code of by-laws for the management and settlement of all matters affecting irrigation and general improvements.

A good start has been made in the development of the property by the making of good roads with granite arched bridges over the stream which runs through Clover valley. Nature has done much for the place—the work of the planters will follow.

Market street are just now adorned with a large number of splendid Navel oranges from Ontario, and a photographic picture of "California on Wheels," the roving exhibit which has recently been viewed by admiring myriads in Ohio, and at last accounts had reached Buffalo, N. Y. Secretary Davies informs us that 33 counties are now affiliated, San Diego, San Bernardino and Los Angeles being among the latest additions.

AGRICULTURAL NOTES.

CALIFORNIA.

Amador.

DOINGS AT THE EXPERIMENT STATION.—*Jack-son Dispatch*, March 9: The first large walnut trees and the first Smyrna figs are planted on the road leading to the residence and reservoir hill. This is the beginning of the setting out of trees on our station. The vineyard is planted, except the cuttings of those varieties which could not be rooted. A thousand holes are ready to be occupied and Mr. Hansen is busy making out his plans how to keep the varieties and the different stock separate. Not a corner will be left empty. Half of the prune orchard (175 varieties) will have to wait until the best clearing is done and cannot occupy their permanent quarters until next season. Of grains we will have a superior opportunity to study the different varieties; of wheat, for instance, there are more than 30 different ones. We would like to draw our farmers' attention to the different beardless barleys; we hope that one of them will replace our long-bearded old variety. We hear that large tracts of Nepal barley are under cultivation. The barn the county built at the station is a large, substantial building, connected with the sheds for tools on one side and the wagon on the other. There is a large yard in front of it and the corral below. The residence begins to look more and more like a home. The walls are all nicely plastered.

Contra Costa.

BARN BLOWN DOWN.—*Danville Cor. Item*, March 14: Yesterday afternoon during the heavy storm, Mr. Geo. Wood, near San Ramon, had two of his barns blown down by the wind, which blew a perfect gale. There were some four or five horses tied in the barn at the time, but luckily they didn't get hurt.

BRENTWOOD HORSES.—*Cor. Item*, March 16: The appearance on our streets of fine-blooded horses is worthy of note. Squire Haney, with his brace of imported Normans, Gen. Veale with his beautiful Cleveland Bay, attended by that prince of grooms, Bob Coverly, are conspicuous objects of attention; while Venot, with his 2000 pounds avoirdupois, brown and sleek as a mole, catches the admiring gaze of the breeders who figure on the ready sale of heavy truck horses. The veteran, Cardinal, with a long list of high-priced descendants, once a beautiful dapple gray, but now white with age, and his prolific son, Cardinal Jr., greet each other here at appointed intervals. Last, but by no means least, Whalahan's pet roaster, California Boy, a lineal descendant of Dan Voorhees, may be seen skipping into town gracefully on a three-minute pace, showing himself a worthy son of an illustrious sire.

Fresno.

IRRIGATION ELECTION.—*Expositor*, March 13: The election to determine the question of issuing bonds in the Madera irrigation district was held last Saturday. The amount of bonds proposed to be issued is \$850,000, and the vote was practically unanimous in favor of the proposition. In the four precincts heard from there was but one negative in 243 votes cast. Minturn had not been heard from up to last evening, but as the sentiment there is known to be in favor, the affirmative vote will probably be unanimous.

Inyo.

PRUNE ORCHARD.—*Inyo Index*, March 13: S. A. Densmore has added several acres to his orchard at Camp Independence, setting out 1200 new trees, principally French prunes, of which fruit he now has 22 acres. His entire orchard and nursery cover 80 acres.

Kern.

SAGEBRUSH FENCE.—*Bakersfield Gazette*: Joe Smith has built for himself on his Weed Patch ranch a four-foot rabbit-proof fence out of this shrub, which for strength and economy must commend itself to all. The brush was placed on the ground in proper line, firmly tramped and secured with barbed wire. It is said to be proof against stock of all kinds, and, what is of vastly more importance, is an effectual bar to the ingress of rabbits.

ALFALFA ON THE HILLS.—The opinion is growing among the stockmen of the county that alfalfa is a better grass for the mountain sides than alfilerilla. Some who have watched the growth of the former where seeds had chanced to fall, and in a few instances where it had been intentionally scattered, say that it makes a better growth and stands drought better. Being a perennial instead of an annual, its roots sink deeper and deeper and thus it is capable of providing itself with moisture.

IRRIGATION BONDS.—*Bakersfield Echo*, March 14: Dr. Smith, who owns considerable land in the Poso irrigation district, was in town Monday. He reports that the bond election held in that district last Saturday resulted in a unanimous vote in favor of bonds. But 35 votes were cast. The amount of bonds to be issued is \$500,000; there are about 50,000 acres of irrigable land in the district. This may seem like a heavy outlay—\$10 per acre—but the end fully justifies the means. The works include dams and reservoirs along Poso creek, and pipe lines to convey the water to the land to be irrigated the day when they are completed.

Los Angeles.

WATER RIGHTS AND TREES AT AZUSA.—*L. A. Herald*, March 16: J. W. Dawson of Azusa

reports great activity all along that part of the valley. Tree-planting is the enterprise of the moment, and orange trees take precedence of all others. The orange-growers of the Azusa are all planting out more trees. Those who heretofore have not had trees are planting all they can procure. All the old disputes about water in the Azusa are settled in a most amicable manner. Nine commissioners have been appointed to take charge of all the questions relating to the water of the district, and solve the vexed problem. The Commissioners are: For the Duarte, Messrs. Scott and Wardell; for the Azusa Land and Water Co., Messrs. Slauson and McNeil; for the Covina Development Co., Mr. M. L. Wicks; for the old Azusa company, Messrs. Forbes and Frye, and for the other interests, Messrs. Marshall and Davidson. Next Tuesday this committee will meet and organize.

BARLEY IN LOWER LOS ANGELES.—*Herald*: The San Joaquin ranch, in the extreme southeastern end of the county, has never been much used for grain-growing. It has been a pasture for sheep and cattle. The most barley sowed in former years has been about 1000 acres. This year there are 6000 acres of barley on the ranch. Between the San Joaquin ranch and the Santa Ana river lies the Santiago de Santa ranch. The towns of Santa Ana, Tustin and Orange occupy a good deal of this area. Much of the remainder is devoted to fruit of various sorts, and a large slice of the territory around Fruitland, Fairview and Newport is used for pasture and alfalfa-fields. It is, however, estimated that there are about 25,000 acres of grain, mostly barley, growing on the other side of the Santa Ana river and below the Santa Ana canyon.

ALHAMBRA ORANGES.—In talking to Geo. Rice of the Alhambra, a *Herald* reporter learned that the orange crop of the Alhambra will aggregate 150 cars, or 54,000 boxes. The prices range from \$1 a box, for good seedling, to \$2.50 for prime Navel. As most of the crop is of budded varieties, the average is probably about \$2 a box; and the aggregate price comes to over \$100,000.

THE OSTRICH FARM at Kenilworth is to be removed to Santa Monica, one mile south of the Arcadia. Mr. Beauchamp, the proprietor of the birds, thinks they will do much better by the seashore, as the temperature is very even, whereas in the foothills at Kenilworth, the mornings in the winter months are rather severe. He has obtained seven acres of land at his new stand and is having a section of it closely boarded in with a fence eight feet high. In addition to this, he has rented a tract of land near La Ballona, on which he will raise alfalfa, the principal feed of the ostriches. Altogether he has 36 full-grown birds.

Modoc.

CURE FOR BLACKLEG.—*Alturas New Era*: R. W. Minto, stockraiser at Eagleville, informs us that salt and saltpetre placed where cattle can lick it, will cure the blackleg and prevent the spread of the disease among healthy stock. He mixes four pounds of saltpetre with 24 pounds of salt, thoroughly pulverizing the compound. He says that cattle died on both sides of his place from the disease, while he lost but one calf, and it never had a chance to reach the lick-log. He deems the above an infallible remedy.

Monterey.

CATTLE SALE.—*Salinas Index*, March 14: Cattle brought good prices at Hiram Corey's auction sale on the Buena Vista ranch yesterday—yearlings, \$14; 2 year-olds, \$20@22; 3 and 4-year-olds, \$25@27. They were of various grades (Durham blood), and went off like hot cakes, the farmers of the valley and surrounding country being the principal purchasers.

Placer.

NEW AGRICULTURAL DISTRICT.—*Grass Valley Union*: The Governor has signed the bill making Placer county a separate agricultural district, it having been segregated from Nevada county, which is left to constitute the 17th district. The new district gets an appropriation of \$4000. The bill provides that at least 50 electors shall meet within ten days to select eight persons whose names shall be presented to the Governor for appointment of directors.

San Benito.

CHEESE.—*Hollister Free Lance*, March 15: From Geo. F. Mitchell, of San Justo dairy, it is learned that that establishment is turning out daily 22 cheeses each weighing 25 pounds, thus making a daily output of 550 pounds. The cheese is made from the milk furnished by 150 cows of the best breed, all owned on the ranch. Mr. Mitchell reports a good demand for the cheese, nearly all of which is consumed in S. F., where his brand is a special favorite. The cheese is also shipped to Mexico, the Sandwich islands and other markets. The new separator recently purchased works to a charm and greatly facilitates the process of cheese-making.

San Diego.

THE WOOL CLIP.—*Otay Press*, March 14: An immense crop of wool for the spring clip is assured. Shearing commences on Monday, May 11th, at the ranch of Hugh O'Neill. The number to be shorn at this place will exceed 2000 head, with a full year's fleece; the sheep being perfectly clean and in excellent condition assures a big yield. The next place will be at Scuseck Bros. This is the largest shearing firm in the Otay. The sheep belonging to this firm will exceed 10,000 head. A number will

shear sheep in this place, aggregating something over 30,000 head. The grass in the valley is better this year than any preceding four years, and at the present time has not nearly attained its growth.

AN EXPERIENCE IN BEE-KEEPING.—*San Diegoan*: I commenced the season of 1888 with three colonies of Italian bees, using Langstroth hives with movable frames. The bees had plenty of honey to stimulate active increase. Plenty of honey came in all through the season for fast breeding and for building up strong colonies ready for the grand flow of honey which began August 15th and practically closed Oct. 1st. With the use of 200 empty combs, I increased my three colonies to 27. I worked one colony for queen-raising, three colonies for comb honey, and 21 colonies for extracted honey. I sold two colonies. The results were: 2400 lbs. extracted honey, at 10c.....\$240 00 100 lbs. comb honey, at 15c..... 15 00 Two colonies sold..... 5 00 25 colonies left, worth..... 150 00

Total.....\$410 00 Deduct three colonies on hand to begin with, worth..... 18 00 21 hives at \$1.50..... 31 50

Total expenses.....\$ 49 50

Net profit.....\$360 50

SILKWORMS RUN WILD.—*National City Record*: T. J. Davis of Oneonta, speaking of the appropriation of the Government for the propagation of the silkworm, wants an experimental station at Oneonta, and gives good reasons why it should be placed there. Cocoons are found there in a wild state, and as they seem to thrive, Mr. Davis thinks no better place could be found. The presence of the worms there is explained by the fact that years ago an Italian imported them and a lot of mulberry trees, to engage in silk culture. Before the young trees leaved, the worms, it was thought, died, and they were thrown away. The Italian left and the trees pined away from want of care. It is now believed that the worms were not dead, and that in what is known as wild buckwheat, they found excellent nourishment. At any rate, Mr. Davis has between 300 and 400 cocoons.

San Joaquin.

IRRIGATED ALFALFA.—*Lodi Sentinel*, March 16: The raising of alfalfa near Lodi has proved very profitable for E. Lawrence and John Hutchins, the proprietors of a private irrigating ditch. Mr. Lawrence has 20 acres and Mr. Hutchins has 30 acres in alfalfa, most of which was planted two years ago this spring. The first year's crops, of which there were four, averaged one ton per acre per cutting. The second year there were five cuttings, each of which gave two tons of hay per acre, or ten tons per acre for the year. The hay sold for \$9 per ton, or a gross income of \$90 per acre. Both gentlemen said the expense of watering the land and harvesting and housing the crops would cost not to exceed \$30 per acre per year, thus giving a net income from an acre of \$60 per year. Besides the hay, there were pastured on the land from Oct. 1st, the date of the last cutting last fall, to the first day of the present month—a period of five months—3 head of stock per acre. Counting the pasturage at current rates, it would bring the net income per acre up to \$75. But then such results can only be obtained through irrigation.

OAKDALE DAM GONE.—The dam of the Oakdale Irrigation Co., about 1½ miles below Knights Ferry, has been carried away by the rain, and the company is out the cost of the structure. The report was denied, but a letter from engineer Unthank of the Stockton Land and Water Co., received last evening, confirmed the bad news. The three dams of the Land and Water Co. are standing the test nobly. The head dam has four feet of water running over it, but does not show any signs of weakening.

San Luis Obispo.

FINE ORANGES.—*S. L. O. Tribune*: W. C. Davis called Saturday to show us a magnificent basket of oranges from the orchard of M. J. P. Andrews, which he was about to send to the State Board of Trade in S. F., to be put on exhibition there. The fruit was of the Navel and Mediterranean Sweet varieties, and as perfect in color, shape and flavor as any we have ever seen.

A HORSE FARM.—Mr. Shackleford has not only tilled the soil and established its merits beyond controversy, but he has all the Kentuckian's love for fine horses, and in one corral we saw him surrounded by 21 brood mares and 18 colts, all well bred, handsome creatures, as gentle as kittens and about as playful. But the horses are the glory of the stock-farm. They are three in number—"Young Nutwood," a splendid two-year-old, full of grace and fire, with a stride that indicates great speed; "Colmar," a con'-black Percheron, imported from France, with satin-like hair, long flowing mane and soft lustrous eye, yet weighing three-quarters of a ton, with every massive limb looking as if it were carved by the most artistic hand out of polished ebony; "Young America," whom hundreds will remember at last year's District Fair as a bright cherry bay, a grandson of the celebrated old imported "Suffolk Punch" and worthy to rival his grandsire's fame for beauty.

TWO YEARS' DOINGS.—*Templeton Times*: The property on the Santa Ysabel owned (we believe to some extent jointly with others) by

Park,
Cemetery and Field.

Send for Catalogue, giving full de-
scription.

In Fig. 1 is represented our "ROUND TOP" Fence, with "SPEAR TOP" Gate; a very handsome combination for an ornamental fence.

Our fence is not a netting; it is a FENCE, with properly proportioned top-rail and posts, which cannot rot or rust, being either galvanized or painted with rust-proof paint. It presents no flat surfaces to obstruct the view, or be affected by the wind. The posts are driven deep into the ground and ANCHORED THERE.

We also make a "FIELD FENCE" (Fig. 2), especially for farm purposes, which will securely enclose pigs and sheep as well as cattle. It CANNOT INJURE THE STOCK, and is handsome and strong. It differs from our other styles in height, needs no "top rail" or ornamental posts, and is therefore proportionately cheaper.

Farmers, beautify your homes by placing our ORNAMENTAL FENCE round your house and lawn, and protect your stock with our FIELD FENCE.

Agricultural Notes.

(Continued from page 274.)

R. M. Shackleford consists of 1389 acres, which two years ago was a cattle-tramped wilderness of which many men, who thought they knew all about it, predicted that it could never be used for agriculture or horticulture.... Upon this land we saw last Wednesday 14,750 trees in the second year of their growth, of which there are 55 acres in prunes and the balance in Picholine olives. These trees are all vigorous and thrifty, and the percentage of replanting has been wonderfully small. There are wheat-fields with growing grain that we venture to say cannot be excelled in any part of the State. There are acres of sainfoin, which after diligently working underground for two months in the manufacture of roots, is now beginning to clothe the surface with its nutritive grass.

Tulare.

GRAPES AND ORANGES. — Visalia Times, March 14: M. Madden of San Jose, now owner of the Boyd & Thomas orchard in Stokes valley, 15 miles north of Visalia, was in town Thursday for the purpose of purchasing 50 orange trees for his orchard. He already has 100 trees in bearing and they are heavily loaded this year with superior oranges.... John Fulgham a few weeks since received a present of 300 grape-cuttings, on condition he set them out on his place 12 miles southwest of this city, on Packwood creek. This started him to thinking about the raisin industry, and he has now secured 15,000 cuttings, which he is rooting and will plant out.... John Kurtz, who lives three miles north of Lemoore, has just completed setting out 50 acres of his ranch to raisin grapes, and 25 acres more to fruit trees.

HANFORD ITEMS.—Twenty-seven carloads of sheep were shipped through Hanford, from Huron, last Monday.... A great horse show is being talked of, probably for the closing Saturday in March.... A meeting of farmers to discuss the cheese-factory question will be held on the day of the horse exhibit. Many farmers are becoming fully interested. Mr. Cohoe, a practical cheese-maker, says the alfalfa raised in this country will bring \$10 a ton if run through the cheese-press.

MORE HARES KILLED.—Traver Advocate, March 16: The rabbit-drive last Saturday was another successful and enjoyable event. The corral was located in the same place and the drive was over the same ground as the preceding Saturday. Notwithstanding this, about the same number of rabbits was killed. There was a good attendance. The drive was conducted in a more systematic manner than the previous one, with the result that, notwithstanding the fact that not so many were rounded up, very few of the bunnies escaped after they got within the wings. They were given time and were not hurried into the pen. The drivers came in a solid phalanx after the wings were reached, and we did not see a rabbit escape after the line of beaters was formed. About 1000 rabbits were exterminated. There were numerous young ones in the lot, and many of the drivers took one or two home with them for a meal, and others took a few to feed to their poultry. Another drive takes place to-day, with the corral moved just one mile east of the place where it has been for the past two weeks.... What an excellent place Traver would be for a chicken-canning establishment! With the abundance of material furnished "free gratis for nothing" by our rabbit-drives, the manufacturers of genuine canned chicken and chicken tamales ought to wax fat here.

NEVADA.

IRRIGATION LAW.—Silver State, March 16: The Act passed by the Legislature at the recent session to regulate the use of water for irrigation and other purposes, provides for the appointment of eight Commissioners, one from each water-district into which the Act divides the State. Each Commissioner shall receive \$5 per day for each day in the year he is attending to the duties of his office. District No. 1 includes all lands irrigated by the Truckee river and its affluents; No. 2, by the Carson; No. 3, by the East and West Walker rivers; No. 4, by the Humboldt; No. 5, by the Owyhee; No. 6, by Reese river; No. 7, by White river; No. 8, all land irrigated by Muddy river and its tributaries. The Commissioners are empowered to divide the water in natural lakes and streams among ditches taking water from the same; also to construct reservoirs at the headwaters of streams for storage purposes.

OREGON.

HORSE FAIR.—Salem, March 9: A stallion show was held in this city to-day, an immense crowd of people being present. Not so many horses were displayed as on some former occasions, but there was better stock and more valuable. Twenty-six fine stallions were in a line, big and little, race-horse and draft.

HORTICULTURAL.—Salem, March 13: In compliance with the law passed at the recent session of the Legislature, creating a Horticultural Commission, Gov. Penneyer to-day appointed as such commission J. R. Cardwell and Henry E. Dosche of Portland, R. S. Wallace of Salem, J. D. Whitman of Medford, Jackson Co., James A. Varney of The Dalles, and James Hendershott of Cove, Union Co.... Portland, March 14: The Oregon Fruit-Growers' Union has filed articles of incorporation. The incor-

porators are: J. R. Cardwell, S. A. Clarke, Ethan W. Allen, O. P. S. Plummer and Henry E. Dosche. The capital stock is fixed at \$50,000. The object of the union is to promote the fruit interests of this State, to provide places for the sale of shipments of fruit products, and to employ all means to create a greater demand for Oregon fruit than has hitherto existed.

PREPARING FOR THE STATE FAIR.—Salem Cor. Oregonian, March 11: The State Board of Agriculture, which has just held its session in this city, took such preliminary steps as leave no doubt of a successful State Fair this year. One hundred stalls, 10x12 feet, are to be erected for speed horses along the fence behind the grand stand, to enable this class of attendants to be separate from the agricultural fair proper, and to be always convenient to the race-track. The Executive Committee was authorized to lease ground to firms dealing in agricultural implements for the erection of permanent exhibition buildings. The board elected Messrs. Looney, DeLashmott, Galloway and Wilson, with President Apperson chairman, as the Executive Committee. D. S. K. Buick, John G. Wright and M. Wilkins were elected Finance Committee. M. Wilkins of Lane county was appointed to make a collection of grains and grasses for a display at the fair. John G. Wright of Salem was appointed to make a collection of fruits and vegetables. The Board of Agriculture extended an invitation to Mrs. Wm. England, Mrs. Eugene Breymann, Mrs. Louis Kahn, Mrs. A. T. Gilbert and Miss Sallie Bush to assist in arranging the fruits and vegetables at the next fair.

A Lively Time With Hares.

The following spirited account of a recent hare-herding and slaughter is abridged from the Traver Advocate, which in this connection reproduces the "Ideal Sketch of a Rabbit-Drive" from the Rural Press of Jan. 14, 1888, commending it as a good portraiture of the affair described:

Last Saturday was a holiday to most of the people of Traver and vicinity, as a big rabbit-drive was announced to take place on that day, near town. About a mile of wire fencing had been purchased by the farmers, and this, with a small corral made of long laths, was set up about half a mile from Cross Creek switch and 3 miles southeast of Traver. Teams continued to arrive in Traver from early morning till the middle of the afternoon, and there were many visitors from Reedley, Dinuba, Visalia and other towns near by. The rendezvous was at Joseph Alcorn's place. It was 2 o'clock before the drive commenced, and by that time there was a string of horsemen, buggies and footmen nearly four miles long, extending from Alcorn's place to Traver, and thence south to the corral.

The signal for the start was given by teams from the rendezvous striking due south, to complete the square, of which the corral served as the south end, the three living sides closing in on the doomed rabbits.

The drive took in a territory about three miles square. When within a mile of the corral nearly all the men in the party got out and walked. They were all armed with sticks about 3 feet in length, and many a bunny was sent to the happy grazing-grounds thereby while trying to escape from the drivers. The shouts from the crowd, which at first were few, increased as the drive progressed until, when the pen was reached, pandemonium reigned and most of the males were hoarse with shouting.

The corral was constructed in the usual manner, with two wings, each half a mile long, while in the corner of the triangle was the pen, about 20x20 feet in size. As the crowd closed up toward the pen, there must have been fully 3000 rabbits in view. But alas! the wire fence had been poorly fastened to the ground, and the pen was too small. The rabbits began to escape under the fence, and the gunners, about 10 in number, who were on the opposite side from the drivers, began to fire into the escapes, who ran along the side of the fence, completely dazed, and the hunters sometimes got four at a shot. But the bunnies inside the inclosure heard the guns, and not heeding the hundreds of people and teams between them and their haunts, dashed for liberty. Many were killed before they could escape, but for the 1000 which were killed, 2000 got away.

The pen was well filled with the rabbits, and the boys in the crowd were given a club each and told to "sail in" and kill them. And they did, with a will. Ker-whack went the clubs, wielded by vigorous young arms, and at nearly every stroke a rabbit bit the dust.

After the carnage we went over the battle-ground. Dead rabbits were visible for two miles, their numbers increasing as the corral was neared, and here they were piled up by dozens, and inside the pen by hundreds, although the number was small compared with what there should have been from the number driven to the corral.

WHAT BECAME OF THE MONEY?—It is estimated that of the sixty millions sterling sunk in the Panama canal bubble, ten per cent has gone to French bankers, five per cent has been paid in bribes to the French press, ten per cent has gone to the inner members of the canal ring, who have had the giving out of the contracts, and most of the balance has gone to enrich the contractors. It is estimated that less than one-half of the work has even now been done.

DOCTORING IN THE DARK.

No sensible surgeon will attempt the performance of an operation involving human life in a room secluded from the proper amount of light. A practitioner will not attempt the diagnosis of a complicated disease unless he can see the sufferer and make an examination upon which to base his opinion relative to the course of treatment necessary to bring about a complete restoration of health.

Notwithstanding the impropriety of such action, there seems to be a great deal of doctoring done in the dark.

By this it is not intended that a literal meaning be inferred, but that a great many mistakes are committed because of the darkness which is the result of ignorance. It needs no illustrations to demonstrate that gross ignorance has caused many fatal mistakes to be made in the treatment of diseases by those who profess to be learned in the art of healing.

In many diseases several organs are more or less implicated, and what seems a primary ailment may be one quite remote. For instance, a severe headache may have its origin in a disturbed stomach. On the other hand, sickness at the stomach may be caused by a blow on the head. The seat of typhoid fever is in the upper part of the bowels, but most of its worst symptoms are often in the brain.

Symptoms of disease, as well as diseases themselves, are oftentimes followers or concomitants of some unsuspected organic disease, and this is peculiarly true of lung, liver, brain and heart diseases in general, for it is now known that they are the result of kidney disease, which shows its presence in some such indirect manner.

Several years ago a gentleman became convinced of the truth of this, and through his efforts the world has been warned of kidney disease, and as a result of continued effort a specific known as Warner's Safe Cure was discovered, the general use of which has shown it to be of inestimable benefit in all cases where kidney treatment is desirable or necessary.

When consumption is threatened see to it that the condition of the kidneys is immediately inquired into, and if they are found diseased, cure them by an immediate use of Warner's Safe Cure and the symptoms of lung decay will rapidly disappear.

There are too many instances already recorded of the terrible results produced by a lack of knowledge concerning the cause of disease, and human life is of too much importance to be foolishly sacrificed to bigotry or ignorance.

TURNING A LARGE RIVER FROM ITS COURSE.—A company has been formed in France, headed by a well-known Alsatian manufacturer, for the purpose of diverting the Gaiers river to St. Christophe, where a fall of 200 meters would be thus obtained, representing a force of 4000 horse power, which would be utilized in developing electricity for the production of aluminium by a new process from the clay found in the district. It is asserted that by means of the process in question, aluminium, which is at present so costly, can be produced at a price that will very little exceed that of the cheapest metals.

Injurious Insects of the Orchard, Vineyard Field, Garden, Conservatory, etc.,

Remedies for their Extermination.

By MATTHEW COOKE.

Late Chief Executive Horticultural Officer of California. Illustrated with over 750 wood-cuts and 35 pages of classified illustrations. This book is designed for the use of orchardists, vineyardists, farmers and others interested in the subjects treated. It is designed to convey practical information concerning some of the species of insects injurious to the industries of cultivators of the soil, and those interested in earth produce generally. Price \$4, postpaid. For sale by Dwyer & Co., publishers, 220 Market St., San Francisco.

ORANGE CULTURE IN CALIFORNIA.

A Timely Treatise.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness. "Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 196 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent postpaid at the reduced price of 75 cents per copy, in cloth binding. Address Dwyer & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

Picturesque Californian Homes.

Vols. 1 and 2, each containing 40 plates, plans, details and specifications of houses—City and Country Homes—costing from \$700 to \$15,000, and adapted to families having good taste and a moderate means.

This work is designed to meet the wants of that large number of persons who have but a limited amount of money at their command, and in building a home wish to use it to the best advantage. Drawn by Samuel and Joseph C. Newsom, Architects, San Francisco, who have taken much pains in its preparation, and confidently assert that mechanics, clerks, salaried men, workmen of every calling contemplating building, carpenters and builders in cities, towns and villages, will find this book a useful aid, worth many times its cost in the information and practical suggestions which it gives.

The Plans are clear, and finely drawn on Lithograph Plates, and handsomely printed; size, 9x13 inches. Subscribers to this paper (old or new), who have paid in advance of the date of application for this premium, can have the same by paying 50 cents additional for Vol. 1 (bound in paper), or 75 cents for Vol. 2 (bound in cloth). Sent by express unpaid, or on receipt of 80 cents (for Vol. 2) or 80 cents (for Vol. 1), postpaid.

Our Seed Offering—1889.

Great Inducements for New Subscribers.

To encourage gardening and further extend the circulation of the PACIFIC RURAL PRESS, we will offer, while this notice remains in our columns, to furnish to all old or new subscribers the following seeds on the favorable terms named below:

VEGETABLE SEEDS.		93 Antirrhinum Majus,

For \$1.00 we will furnish new subscribers the Pacific Rural Press for three months, and \$1.00 worth of the above seeds. For \$1.75 the Rural six months and \$1.00 worth of seeds. For \$3.25 the Rural 134 months, and \$1.00 worth of seeds. (When preferred, a duplicate bill for seeds to be furnished at any time within 12 months will be given.)

The seeds will be carefully forwarded (within a few days), post paid, from one or more of our leading and reliable seed-men, whose name will accompany the package. In ordering, write on a separate sheet the number only of each article wanted as numbered, together with your address.

No better seeds for this coast's use can be secured. As far as convenient we should like to hear the results obtained from the seeds we thus furnish.

For other kinds of seeds, or for seeds in larger packages, patrons are referred to reliable seed-men advertising in this paper. We wish to aid in increasing the planting and cultivation of gardens.

Old subscribers can advance payment so that their subscriptions will be paid the same length of time in advance and receive the same terms as above. Those who remit before seeing this offer can send the additional amount which would have entitled them to a premium, and receive the same by stating which numbers they prefer.

We are not going to embark in the regular seed business, and have not time to investigate or answer many questions of private interest only, nor respond to orders received without remittances.

Subscribers will please notify neighbors who do not take this paper of this offer, and the merits of the Rural.

"De man wot knows it all is alluz a-makin change, a-buyn' ob experience." The man who does not know it all "knows it all" about Pumps can find out a great deal about them in *Grimshaw's PUMP CATECHISM*. By mail, postpaid, \$1. Dewey & Co., 220 Market St., S. F., Cal.

BOW, WOW, WOW, WOW, WOW!

We have been BARKED AT before; but WE DON'T MIND IT. BECAUSE we are selling lots of Mills. FOR INSTANCE, we shall ship this week not less than 30 Mills into the "GREAT SAN JOAQUIN VALLEY." All sold, too—not one consigned. What do our COMPETITORS say to that?

FRUIT MARKETING.

The Cost of Distribution, Etc.

EDITORS PRESS:—I have read with interest in a recent issue of your good paper an article by Mr. Block which gives his estimate of the net returns to the shippers of green fruits to Chicago. A good deal more could be said which he did not allude to. For instance, the railroads during the same period, notwithstanding the amount paid to them for freights, especially the A. & S. F. road, made enormous losses, borrowed \$7,000,000, lost in depreciated value to the stockholders some \$40,000,000, and dividends, which has to be borne by hundreds of Eastern investors who contributed to make it possible for fruits, passengers or supplies to be transported to or from California.

Mr. Block does not try to ascertain whether the commissions paid compensated the merchants who provided capital and time to dispose of the goods, nor whether it actually paid the cartman to cart them, or the dealers any profit. Possibly each of these could show undesirable returns. On the other hand, his own figures show about 1 1/2 cents per pound net return to the growers, or, say \$30 per ton, and even half of that on the average, as set forth by the "Prospectuses" of dealers in land in California for raising fruit, will make men rich, even though so much is otherwise expended in marketing the fruit.

Such articles published and such conclusions drawn as set forth in your columns are read and interpreted quite differently when read by the public elsewhere than locally. They begin to figure whether after all the raising of fruit promises any inducement to investors, and so one and another either abandons anticipated purchases of our lands, or hesitates and forces holders into greatly reduced prices.

I often am surprised at the various statements which emanate from the papers of this State, and imagine their effect when read in the East in the light of comparison, and by the remaining facts which can be added from observations outside of the locality where the articles are written and printed.

No; there is, and ever must be, the necessity of all contributing, each his skill and labor for a fair equivalent, and if any one is left out, all would suffer and none more than the producer.

Without a railroad the producer would fail to get his products to any market. When there it pays him better to employ a merchant to sell than to do it himself, and the cartman who makes a business of carting can carry his products from one to another far cheaper than if the producer himself undertook every department of the business.

The fact that so many great growers are constantly described as making and accumulating money ought to testify that the growers could show the most for their results. No doubt many of these statements are colored to suit the occasion for which they are quoted, but they are received as inducements for others to follow, and so they do.

If the railroad should stop for a day, or be uncertain of going at all regularly, what a distress would be seen. "Live and let live" is the best and wisest course to pursue. Mr. Block no doubt has done well. Let the union, the officers it pays, the printers it employs, the laborers, box-makers, packers, transporters and even the Chicago commission merchants and cartmen live, and we shall be all happy.

Which one could be dispensed with? Any one would be missed. Each one has a part and a duty to perform, which if duly performed merits fair compensation.

El Cajon, Cal.

HARRY E. FURBER.

It Pays to Pack Well.

H. A. Lound, who left Vacaville about the middle of November, has returned after an extensive trip through the Eastern States. Mr. Lound, in speaking of the mild winter in that section, said it prevented better prices being obtained for dried fruits, as good apples could be bought for \$1 per barrel. "I sent my fruit to Loomis & Co., 95 Barclay street, New York, and when I got there I had the first opportunity to compare my packing with those of others. I took good care of my stock, and paid attention to the way in which it was packed, and the result was better than I expected. For 2200 pounds of unpeeled Morris Whites, I got 13 cents per pound the day that they arrived, and for other portions of my shipment the prices ran as follows: Peeled peaches, 18c; unpeeled Clingstone peaches, 11c; apricots, 16c, and nectarines 12c. Some people are of the opinion that no matter how they ship their fruit, it is good enough for the Yankees to eat, but the best prices are obtained for the best packed fruit."

Another Case in Point.

Wm. Washburn, employed on the Webster place in the valley, was packing some unpeeled peaches some time ago. He thought it would be an excellent idea to keep track of one box, and accordingly wrote upon a slip of paper, asking the person who opened the box to let him know what price he had paid for it. He had forgotten all about the matter until the past week, when he received a letter postmarked, "Milton, Pa." The writer stated he was glad to comply with Washburn's request and acknowledged the fruit was the finest he

ever saw, and had cost him thirty cents per pound. Mr. Webster had sold the fruit for eight cents. This shows what the East thinks of the California fruits.—*Vaca Valley Enterprise.*

Shorthorn Sales.

As will be seen by advertisements in our columns, there are to be two quite important sales of Shorthorn cattle in San Mateo county next week, viz., that of the herd belonging to W. H. Howard, Esq., of San Mateo, which will be sold on the 29th of March, being the day after the sale of Mr. Robt. Ashburner's cattle, which will be sold at Baden Farm on Thursday, March 28th. We have not received as yet Mr. Howard's sale catalogue, but that of Mr. Ashburner's herd only, which contains the pedigrees of 23 females and 12 bulls and bull calves, all of the very best milking strains or families obtainable. Not only that, but they are of families that have always been used as dairy cattle both before and since they have been in the hands of the present owner. All in the catalogue, upon examination of the pedigrees, will be found to trace back through long lines of good blood to the very beginning of Shorthorn genealogy, including such bulls as G. Coates' Patriot (486), Mr. Champion's Blythe Comet (85), C. Colling's Favourite (252), Hubback (319) and Studley Bull (626), the latter being calved in the year 1737 and the oldest, or first-born, Shorthorn on record.

Mr. Ashburner is one of the few breeders in this State who has stuck to the Shorthorn breed of cattle, and, so far as we know, without ever expressing a desire for changing to any other breed. Brought up from his infancy among Shorthorns, under the teaching of his late father, who was one of the first breeders in the north of England, no one will be likely to blame him for not being led away by the excitement there has occasionally been on this coast about other and less tried breeds. Mr. Ashburner has never kept his cattle in any fancy way, but has always aimed at breeding useful animals.

The following extract from the introduction to the catalogue will give an idea of his way of keeping:

The cattle have always been kept in a plain way and used altogether for breeding purposes and in the dairy. All the cows are milked, and all the calves fed from the pail, each one separate. The bull calves are well, but not extravagantly, fed, always running out when there is pasture for them.

There has never been a beast of any age or sex in the herd fed up for exhibition. Whenever I have exhibited at the fairs (having done so only a few times), the cattle have gone just in the condition they are regularly kept in—that is, about as good breeding stock ought to be kept. They grow and carry their own blankets in the shape of good heavy coats of hair, which is quite necessary in the exposed situation in which they are kept, on the coast hills, exposed to the cold summer winds and fogs of the Pacific ocean, which, owing to sudden changes of temperature, many and often, is one of the most trying of climates. With the exception of the bulls and the youngest of the calves, all the cattle are kept out of doors night and day throughout the year. The cows in milk are kept in when the nights are very wet and stormy, which is seldom more than five or six nights in a year. In the past winter they have not been kept in one night.

The young bulls to be sold will be found worthy the attention of both stock-raisers and dairymen. They are a short-legged, well-fleshed lot, and, being descended from milking families on both sire and dam's side for several generations, they are fit to go for either beef or dairy purposes.

Great care has always been taken in the selection of bulls for use in the herd, both as regards breeding and individual merit, particular attention having always been given to perpetuating the milking qualities in the herd by using none but bulls of good milking families.

Veterinary Association.

The quarterly meeting of the California State Veterinary Association was held in this city March 14th. The session was largely attended, and the proceedings were lively and interesting.

Thomas B. Maclay of Petaluma presided, and A. McCullum of Sacramento was secretary.

Several papers were read on the diseases of domestic animals, and subsequently discussed in a general way by the members.

The principal question discussed was the sanitary condition of Butchertown. Most of the members visited the locality recently, and others were familiar with its peculiarities. The general opinion was that the condition of the place was bad, and that something should be done for its improvement.

An interesting feature of the meeting was the president's inaugural address, in which he reviewed the progress of veterinary science, and made many suggestions that were heartily commended.

He insisted that the veterinary surgeon is the mental peer of the medical doctor, and rebuked the State Senator who recently declared that "all veterinary surgeons were nothing more nor less than veterinary cranks, and that a veterinary surgeon was nothing but a man who had not the ability to become a medical man."

In concluding, the president reminded his hearers that it was their duty to make the most of every opportunity afforded them for studying the natural causes and effects of diseases. All diseases, he thought, are due to the presence of poisonous organisms or bacilli in the system. When the nature of these parasites is known the difficulty of diagnosing a disease will have largely disappeared.

THE LOST ATLANTIS.

For many centuries there has been a tradition of a long-lost island called Atlantis.

The Greek geographers located it in the Atlantic Ocean, west of the northwest part of Africa and the Pillars of Hercules. The sea-kings of Atlantis are said to have invaded Europe and Africa, and to have been defeated by the Athenians.

All the legends agree that it was a vast island, of inexhaustible resources, and inhabited by a race of superior people. For ages this island has existed only in legendary lore. But now, when the light of modern research is turned full upon the investigation, behold the lost Atlantis at our very doors.

So the bigoted medical fraternity goes groping about in the dark, seeking for an Atlantis or Esculapius, when if they would investigate, they would behold the lost Atlantis at their very door. With their ancient text-book, a case of physic, a paper in their waistcoat giving them license to practice, experiment and dose with their injurious drugs, cauterize and perform unnecessary acts, with no person or laws to hold them accountable, they continue their bigoted, unjustified practice, staring into vacancy, and imagining that they see in themselves an Esculapius.

Wrapped in ancient bigotry, they are crying out against all improvements that have been made in medical science. They denounce any new idea advanced by a layman or an opposition school as a fraud.

Why? Because humanity will not be benefited? Not at all, but because their specialism did not make the discovery.

Yet they concede that there is no remedy known to their materia medica that will cure an advanced kidney malady and the diseases arising therefrom—although many of them know from crowning proof that Warner's Safe Cure will—but unscrupulously treat symptoms and call them a disease, when in reality they know they are but symptoms.

A few of the more honest physicians admit that Warner's Safe Cure is a valuable remedy and a great blessing to mankind, but say, in so many words, when asked why they do not prescribe it, that they cannot according to their code.

Nevertheless, the world is fast becoming satisfied that the cure for kidney and liver diseases, in whatever form or condition, has been discovered, and there is no doubt but what Warner's Safe Cure and its fame will live long after such bigotry as we have instanced is dead and buried.

The late eminent physician and writer, Dr. J. G. Holland, published in "Scribner's Monthly," and showed his opinion of such bigotry, and no doubt was satisfied that Atlantis might possibly be discovered in a proprietary medicine, when he wrote editorially, as follows:

"Nevertheless, it is a fact that many of the best proprietary medicines of the day were more successful than many of the physicians, and most of them, it should be remembered, were first discovered or used in actual medical practice. When, however, any shrewd person, knowing their virtue, and foreseeing their popularity, secures and advertises them, then, in the opinion of the bigoted, all virtue went out of them."

Situation Wanted.

A gentleman who has had experience in journalism, and is a competent writer and clerk, desires a situation as such in a business house or other establishment. Will do such work at very moderate compensation, providing the same can be transacted during hours of the day, as he is always engaged during evening hours in writing letters of correspondence, etc. Best of references furnished. Please address (stating where an interview can be had), DU R., 1033 Mission St., S. F.

TAKING BY STORM!

Don't pass this by without reading it! It may do you some good. These are facts. The HAVANA PRESS DRILL will assure you an excellent crop, whether it rains or not.

BIANCO, CAL., Mar. 10, 1889.

Messrs. Truman, Hooker & Co., San Francisco, Cal.—GENTLEMEN: The Havanas are taking the farmers by storm; it will be only a matter of time when they will be the only Drill in use in this valley, as I think we have a fair start with the Drills which I introduced in my territory, and they are the only Drills of any kind that were put in the field this year in this vicinity. I am positive that there will be a big demand for them next year, as the farmers who have seen it work, claim it to be the best Drill in the market. Will send you more testimonials shortly. Yours very truly,

C. J. FANEUF.

HAVANA PRESS DRILL.

WALNUT CREEK, CAL., July 13, 1888.

Messrs. Truman, Hooker & Co., San Francisco, Cal.—GENTLEMEN: I borrowed an Havana Press Drill from Mr. Jordan and drilled in 200 acres, last April and May, after all other parties were through sowing, and my neighbors said it was too late. I have had a better crop of Barley than those who sowed broadcast in January and February. Had I sown broadcast, I would have got no crop, but the Havana Press Drill put the grain down to moisture, and I think it is the very best way to put in grain. Yours very truly,

B. R. PALMER.

Or seven and a half tons per day for each man
employed, which is more than has been or
can be accomplished by any other Press yet
manufactured. Twenty tons a day with
Tight Baling Press. Can put ten tons in a
car. Satisfaction guaranteed.

Does not require Hay Stacks
built to suit our Press.

WOOL PRESSES
ALSO BUILT
TO ORDER.

HOUSER COMBINED HARVESTER

Received First Premium, State Fair, Sacramento.

No Experiment! No Failures
NINE YEARS IN THE FIELD.

500 IN FIELD USE.

None Ever Returned.

They have a larger sale than all other Harvesters combined. Built for heavy work and
large grain fields with heavy grain. Always victorious in competitive trials.
They have reduced the cost of Harvesting to less than \$1 an acre, and save three bushels an
acre over and above Heading and Threshing. Have our Premium Extra "Star"
Double Shoe Cleaner, the only successful Harvester Cleaner made. Received First
Premium in 1888.

WOODLAND, Sept. 19, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 14-foot Houser I bought of you this
season fills the bill right up to the handle. I have cut
1200 acres; have threshed 623 bags of wheat in one day,
averaging 540 bags for six days. The Star Cleaner and
Improved Shoe are perfect, and last, but not least, I
turn a square corner and save all the grain.

J. R. JONES.

YUBA CITY, Sept. 13, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I have one of your star Cleaner and Im-
proved Shoes on my Houser Combined Harvester, and
can say that the cleaner is far superior to any I have
ever seen in barley, being able to return unthreshed
barley and pieces of heads direct to the cylinder, some-
thing that everybody can appreciate that has run a
Harvester. The Cleaner is of sufficient capacity, I hav-
ing threshed 650 sacks a day. It is well made and very
durable. The new shoe is perfection. I consider the
Houser very strong and durable, and as light draft as
machines of lighter build of same capacity.

A. GRAFFIS.

Biggs, Nov. 25, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: I bought one of your 16-foot Houser
Harvesters this season and cut my crop of 1200 acres
with same without any expense for extras. The Star
Cleaner and Improved Shoe are perfection. Heretofore,
when using another make of Harvester, I had to have all
my grain recleaned at an expense of \$800 or more, but
with my machine it was not necessary, as the grain was
clean enough for seed as it was taken from the spout,
and I only regret that I did not buy one two years ago,
and I would have saved over \$5000. I prefer the Im-
proved Houser to any other make of Combined Ma-
chines, and would recommend it to my friends in need of
a Combined Harvester.

W. S. RIDDLE.

YUBA CITY, Oct. 15, 1888.

Stockton Combined Harvester and Agricultural Works
—GENTLEMEN: The 16-foot Houser Harvester that I
bought of you this season, with the Star Cleaner, gave
entire satisfaction, and, I think, is the best Harvester
in the market. Will recommend it to anybody or friend
that wants to buy a Harvester.

James G. Clark.

[Original—By M. T. BROOKLEBANK.]

James G. Clark, the subject of the accompanying sketch, was born in Constantia, N. Y., June 28, 1830, and is now in his 59th year. His native village is located on the border of Oneida lake, and it was along the wooded shores of that beautiful sheet of water that the poet-singer's artistic tendency was developed in early life. His parents were intelligent and influential Christians, members of the Episcopal church, and their six children—four sons and two daughters—were confirmed in the same faith.

The subject of this sketch was the third child, and from infancy displayed an unusual gift for music. He says the first song his mother taught him was Henry Kirk White's "Star of Bethlehem," set to the sweet old Scotch air of "Bonny Doon." He committed the words and music to memory, and sitting on his mother's knee, would sing them to the family and to visitors without missing a single note or word when only three years old. His musical and poetical gifts developed as he grew older, and at the age of 21 he had drifted into the concert field, singing first in his native village, then in neighboring towns, gradually extending his field into adjoining counties. He was married about this time to Miss Mary Macfarlane of his native town. Three children were the result of this union, all of whom inherited in a good degree their father's gifts. The two oldest were daughters. The first, Jennie, a lady of rare intelligence, was married some nine years ago to Hon. J. P. Jacobson of St. Paul, Minn., and is now living in their lovely home, the "Wayside," at St. Anthony Park, midway between the twin cities. They have a beautiful boy named Robin, who is the subject of one of his grandfather's sweetest songs, entitled "Sleep, Robin, Sleep." Mr. Clark's second child, Annie, died when only eight years old, and is the subject of his sweet lyric called "Beautiful Annie." The third child, James G. Clark, Jr., is an intelligent and active young man of 22 years, and is connected with the Minneapolis *Daily Star*, being a natural journalist.

Mr. Clark's early poems gave him more than a local reputation at once, and attracted the attention of Ossian E. Dodge, who was then publishing the *Literary Museum* in Boston and had a quartet company called "Ossian's Bards." Mr. Dodge, who was quick to detect and utilize genius and talent, wrote to the poet-singer and appointed him musical composer of the company. It was about this time that Mr. Clark issued his famous quartets, "The Old Mountain Tree," "The Rover's Grave," "The Rock of Liberty," etc. These compositions were not only sung by "Ossian's Bards" with great success throughout New England, but were taken up and sung in the theaters and by college glee clubs, and became immensely popular all over the Union. The more intelligent public seemed to instinctively recognize in them a new departure from the average rhyme and jingle in the field of new and original songs. "The Old Mountain Tree" especially was sung, encored and repeated sometimes three times every night for over three weeks in the Boston Museum, which was then the most popular and fashionable theater in Boston. This quartette is now a favorite in our public schools, although it is some 35 years since it was first issued in sheet form by Oliver Ditson.

Mr. Clark's early lyrics were followed by "The Mountains of Life," which may now be found in nearly every choice collection of poetic gems; "Marion Moore," "The Beautiful Hills," "Where the Roses Never Wither," "The Isles of the By and By," and "Leona," a poem that the *Home Journal* says has been more widely copied, admired and committed to memory than any other of its class ever published in America. His songs were copied by the press all over the land, and read, sung and admired for their refreshing originality of expression, combined with that simplicity and directness which characterize everything Mr. Clark writes. They won high praise from critics like Geo. P. Morris, who, with N. P. Willis, then owned and edited the *Home Journal*, and who in his generation was regarded first among American song-writers.

When the great Civil War broke out, Mr. Clark enlisted in the 35th New York regiment as first lieutenant, and was detailed to stay in the recruiting service, for which he was so well qualified by his natural gifts of voice and manners. He threw himself into the work with such energy—traveling, speaking and singing day and night for the cause, in all kinds of weather, throughout the northern portion of New York State—that he contracted lung fever, from which he was saved only by the skill and care of his old friend Dr. Jas. C. Jackson, the famous health reformer and author, of Dansville, N. Y.,

founder of "Our Home on the Hillside." Dr. Jackson gave it as his opinion that it would be extremely hazardous for Mr. Clark to go into active service in the field, and this opinion being supplemented by the urgent solicitations of friends who felt that the poet-singer could be of far more service to his country in his profession—singing and arousing the patriotism of the people—induced him to give up the idea of camp life and to re-enter the concert field, which he did.

He traveled all over the North, singing his own stirring war lyrics, such as "Fremont's Battle Hymn," "Let me Die with my Face to the foe," "When You and I were Soldier Boys," "Minnie Minton," etc., giving half the proceeds of his concerts to the Sanitary Commissions and Soldiers' Aid Societies, donating in this way many thousands of dollars to the cause of his country.

He also sang for numerous war meetings and aroused more patriotic fervor and enthusiasm among soldiers than any other one singer of his time. His well-known martial lyric "Fremont's Battle Hymn," published

moral, social, religious and political reform, have attracted wide attention for their rare scope and merit. The late Roscoe Conkling used to speak of him as "one of the strongest political writers in America." All of his work, both poetry and prose, in the line of religion and reform relates to underlying principles rather than to dogmas, methods and organization, and this renders it all the more lasting and valuable as help and inspiration for the coming and higher civilization now dawning upon us. His "Evenings of Poetry and Song" are unique and very entertaining and not easily forgotten by those who attend them. He has given several thousand public entertainments, and his personal friends who remember him lovingly, are legion in every State in the Union. Edmund Clarence Stedman writes to him: "I can say of you as I have once said of an English writer—I envy the poet who can go everywhere and hear his own words and music."

Mr. Clark has never indulged in stimulants or narcotics, and his mind and body are still in their prime, though his gray hair and silver

THE POET-SINGER, JAMES G. CLARK.

the first year of the war, rang like a prophecy and trumpet-peal through the land, and was more widely copied by the press and recited at mass-meetings than any other poem of the war, with the possible exception of Julia Ward Howe's "Battle Hymn of the Republic," written two years later. His "Minnie Minton," written later on, was unequaled by any other song of its class for pathos, melody and poetic beauty. He also composed for "Miles O'Reilly's" famous camp song, "We've Drank from the Same Canteen," its only lasting melody.

Mr. Clark has frequently been called the "Tom Moore" of America, combining as he does in the highest degree the triple gifts of poet, composer and singer—a combination in which he probably has no rival living at the present day. His later poems, such as the "Mount of the Holy Cross," "The Voice of the People," "Innovation," "A Vision of the Old and New," the "Infinite Mother," which E. C. Stedman so highly eulogizes, display a wider, deeper and higher range of thought, feeling, philosophy and poetic power of expression than his earlier efforts, and entitle him to a permanent place among the world's great poets.

But it is not alone in the field of poetry and song that our singer is at home. Some of his prose articles and essays, touching

beard make him appear at first sight older than he really is. He stands five feet ten inches, is straight as an arrow, and he verges completely in form and features upon the manly and commanding. His voice in song is very sympathetic, full of goodness and soul and awakens to the deepest sense of what is said and sung. His interpretation of ballads, and especially sacred songs, is that of a master and seems to impart to an audience the fullest satisfaction.

His very latest lyric, "Star of My Soul," which is yet unpublished, is one of the rarest gems. The words and music march and talk together in tender and loving pathos. The following sublime production—the last in his volume of "Poetry and Song," lately issued by D. Lothrop & Co. of Boston, has not been surpassed by any writer of the present age. It is not only abreast of, but it leads a department of thought that many scientific and religious persons entertain relative to what they term the "Motherhood and Fatherhood of God," and like all other questions within the realm of life, it belongs to the true poet to see and to formulate; hence it is that the learned Lord Brougham said that the "world should sit at the feet of poets and learn," for they are the creators of thought. This poem, the "Infinite Mother," is simply a Hymn of Life of larger

expression and deeper spiritual faith in the divine parentage and Godhead of the universe than was entertained at that era in our literature when Bryant wrote his "Hymn of Death"—Thanatopsis.

Mr. Clark is a resident of Minneapolis, Minn., and is one of the staff of the *Speculator*, a large illustrated weekly journal. He has spent a summer in California and contemplates making our State his home, and may locate in or near this city.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

From the official report of U. S. Patents in Dewey & Co.'s Patent Office Library, 220 Market St., S. F.

FOR WEEK ENDING MARCH 5, 1889.

398,936.—GRINDING PAN—M. P. Boss, S. F.

398,937.—ROTARY HARROW—A. C. Brown, Eugene City, Ogn.

398,942.—SAWMILL SET WORKS—F. W. Cook, S. F.

398,967.—MAIL-BAG FASTENING—Jos. Jacobs, S. F.

399,065.—COIN ADJUSTER—Geo. McLoughlin, Carson, Nev.

399,209.—ELECTRIC AMALGAMATOR—J. H. Rae, S. F.

398,989.—WRENCH—J. Tomlinson, Folsom, Cal.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Inducements to Subscribers.

To favor subscribers to this paper, and to induce new patrons to try our publication, we will furnish, to those who pay fully one year in advance of date, if requested the following articles (while this notice continues), at the very greatly reduced figures named at the right:

- 1.—The Agricultural Features of California, by Prof. Hilgard, 138 large pages, illustrated, cloth, with colored maps (full price \$1).....\$0.25
- 2.—Recent Poetic Review, entertaining and instructive; 85 pages (a handsome and pleasing present).....25
- 3.—Dewey's Patent Elastic Binder (cloth cover), name of this paper stamped in gilt.....50
- 4.—Niles' Stock and Poultry Book for Pacific Coast, pamphlet, 120 pages illustrated.....25
- 5.—Kendall's Treatise on the Horse and Diseases, 88 pages, instructive illustrations.....05
- 6.—To New Subscribers, 12 select back Nos. of the RURAL PRESS, "good as new".....Free
- 7.—Any of Harper's, Frank Leslie's and most other first-class U. S. periodicals, 15 per cent. off regular rates.
- 8.—Pacific Coast and Eastern Dailies and Periodicals, except special publications, we can usually give 10 to 15 per cent. off advertised retail rates.
- 10.—March of Empire, by Mallie Stafford.....25
- 11.—Life Among the Apaches, 322 pages, stiff cloth.....25
- 12.—\$1 worth of choice seeds, to be selected from a list of 107 flower and 82 garden seeds, as previously published, or which list we will send on application.....25
- 14.—Dewey's Pat. Newspaper Fileholder (18 to 36 in.).....25
- 15.—European Vines Described, 63 pages.....05
- 19.—Webster's Dictionary, 634 pages, with 1600 illustrations; very handy and reliable.....50
- 23.—Architecture Simplified, 60 pages.....06
- 24.—Mother Bickerdyke's Life with the Army; patriotic and ably written; 166 pp., cloth, \$1.00.....50
- 25.—Ropp's Easy Calculator, cloth, 80 pp.....25
- 26.—How to Tell the Age of a Horse.....06
- 27.—Percheron Stud Book—French—bound in leather, 192 pages (full price, \$3).....1.00
- 28.—What Every One Should Know; a cyclopedia of valuable information; 510 pp.; cloth; (full price \$1).....50
- 29.—Knitting and Crochet, by Jennie June; 144 pp., 200 illustrations.....25
- 30.—Needle Work, by Jennie June; 12 pp., 200 illustrations.....25
- 31.—Ladies' Fancy Work, by Jennie June; 152 pp., 700 illustrations.....25
- 32.—The Way to do Magic; illustrated, 60 pp.....10
- 33.—The Taxidermist's Manual; illustrated, 64 pp.....10
- 34.—A Dictionary of American Politics; comprising accounts of political parties, measures and men, and explanations of the Constitution, divisions and practical workings of the Government, together with political phrases, familiar names of persons and places, noteworthy sayings, etc., by Everett Brown and Albert Strauss. (Full price \$1).....50

NOTE.—The cash must accompany all orders. Address this office, No. 220 Market St., S. F.

In writing correspondence, items of information, or on other business, please use a separate sheet.

Sample copies of this paper mailed free to persons thought likely to subscribe.

Send for free circular describing most of these premiums, and any further information desired.

Inform your neighbors about our offers and paper.

CONSUMPTION CURED.

An old physician retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. Novas, 149 Powers Block, Rochester, N. Y.

TO SUBSCRIBERS.—Members of the P. of H. now receiving the regular editions of the RURAL PRESS are advised to try our Grange editions instead for awhile. The cost is the same for each edition. We will transfer names from either to the other on receiving a written request therefor.

Cheap Money for Farmers!

\$550,000 TO LOAN ON RANCHES ON MORTGAGE; large sums below market rates. S. D. HOVEY, 318 Pine street, San Francisco.

Lands For Sale and To Let.

Agricultural and Grazing LANDS FOR SALE.

7975 Acres of fine grazing and agricultural land, including 4000 head of fine grade stock sheep; abundance of water; 9 miles from Merced City, and near Merced River; price, \$7.25 per acre; 1000 acres good wheat land. Address

OSTRANDER & SONS,
Merced, Cal.

Or **N. C. CARNALL CO.,**
624 Market Street, San Francisco, Cal.

A RARE BARGAIN!

The undersigned offers for sale, on good terms, his CLOVERDALE DAIRY FARM of 500 acres, situated on Squirrel Creek, 2 miles west of Grass Valley. It is well watered by springs and has excellent irrigation facilities, commodious farm buildings, orchard of 150 trees and 6 acres of vineyard. A fine herd of Holstein, Ayrshire, Jersey, and Durham (thoroughbred and grade) cattle for sale with or without the ranch. Holstein and Ayrshire premium bulls on lowest terms, including "Tehama," which, on account of kinship to the herd, can no longer be used in breeding. A good dairy route is also included in this offer.

H. B. NICHOLS, Proprietor.

LANG, MERRITT & DEXTER,
Real Estate Brokers.

A LONG LIST OF

Choice Fruit, Farming, Grazing and Colony Tracts.

Address, SALINAS CITY or CASTROVILLE, MONTE-REY CO., CAL.

FOR \$5000.

A Ranch in El Dorado county, near Placerville, contains 160 acres, nearly all fenced in with a four-strand barbed wire fence, a good house of 11 rooms, hard finished, two brick chimneys, cut stone basement with cut stone steps, a good barn and stable, chicken house, work shop and other out-houses, a good well of water, one water ditch for the land, 1000 fruit trees, all in bearing, Peach, Apple, Fig and Cherries, 1000 Grapevines; 80 acres cleared and ready for the plow, all nearly level; about 25 acres woodland, pines, etc., all of which can be cleared; three cows and two calves. The Ranch is five miles from Coloma and nine miles from Placerville. The soil is a red loam, the house stands on the county road and the stage passes it twice every day. A span of horses, a new harness and wagon, plow, harrow and other farming utensils to be given with the Ranch. The Title, U. S. Patent. For further information address, "RANCH," Box 2361, San Francisco, or care of Illustrated Publishing Co., 220 Market St., S. F.

LAND TO RENT

On Exceedingly Liberal Terms.

The S. E. quarter of Sec. 13, T. 21, R. 23, and all of Sec. 15, T. 23, R. 24, in the artesian belt in Tulare county, will be rented at a nominal rent for winter sowing, if applied for soon. The greater part of this land is rich, level and all ready for the plow. Address L. E. Smith, Pixley, Tulare Co., Cal., or Ranch Owner, office RURAL PRESS San Francisco, Cal.

FOR SALE OR EXCHANGE.

Ranch of 200 acres on Coquille River, Coos County, Oregon; 40 acres bench land, 160 acres bottom, 80 acres under cultivation; 1 1/2 miles from Coquille City, one-half mile from steamer landing. An abundance of fine spring water on place. Price, \$4500 cash, or will exchange for California property in vicinity of San Francisco Bay. For further particulars apply to

DEWEY & CO., 220 Market street, San Francisco, Cal.

Fine Sheep and Swine.

We draw the attention of our readers to the cuts used herewith as representing some of the animals owned by Andrew Smith of Redwood City, whose stock is now so well known throughout the entire Pacific Coast. His breeding farm is situated about 1½ miles from Redwood City, one hour's ride from San Francisco. It is one of the finest locations on the Pacific Slope—on the first rise of the foothills, and overlooks the towns of Redwood and Menlo, commanding a view that cannot be excelled, and can only be fully appreciated by those who have visited the farm. The fame of the

Dishfaced Berkshires

Bred on this farm has spread far and wide, and the best evidence of their quality is the number of letters on Mr. Smith's file from breeders who have purchased from him attesting their entire satisfaction with stock received; for in most cases the purchasers leave the selection to Mr. Smith, and don't see the animals until they arrive at their destination. As all stock from this farm is guaranteed, purchasers can order by letter and feel perfectly easy about getting good value for their money, although visitors and intending purchasers are at all times welcome and are invited to inspect the stock before purchasing.

The importations made direct from England at the head of this herd have been selected from the best blood and most fashionably bred families, regardless of cost, and by judicious crossing of the different strains imported, he has a herd that stands first on the Pacific Coast and equal to any in the United States, and one of which any breeder might justly feel proud. For the past three years Mr. Smith has taken first premiums as well as sweepstakes prizes at our State Fairs. He makes annual importations direct from Europe, and can supply breeders with males and females of entirely different strains of blood, all bred from imported stock and recorded in English and American Berkshire herd-books.

Improved Poland Chinas.

Owing to some breeders having a preference for this family, Mr. Smith has recently decided to breed them also, and has imported from Illinois, Iowa and Michigan some of the finest specimens to be had; they have been selected with the greatest care by an experienced breeder, and from what the writer has seen on his farm, it is predicted that he will soon have as good a reputation for Poland Chinas as he now has for Berkshires. Mr. Smith's motto is to lead and to be fully up to the times. He purposes breeding the two families and to have the best of both, to supply breeders at reasonable prices and to give every purchaser good value for his money invested. All his Poland Chinas are recorded.

Shropshire Down Sheep.

Mr. Smith has also a fine flock, which he imported direct from England, and will this season have a few ram lambs for sale.

Breeders requiring pigs or sheep will consult their own interest by inspecting these herds before purchasing. The stock can be seen at the farm, where breeders can judge for themselves, and where further information will be cheerfully given.

Hale Bros. & Co.

One of the most imposing and attractive commercial houses in Sacramento is shown in the accompanying cut. It is situated on the corner of Ninth and K streets, and occupies one-half a block. The whole lower story and basement is used by this enterprising firm in a general variety of dry goods and notions equal in extent to any store outside of San Francisco in this State.

This firm was established at Sacramento in 1880, in a small store on the opposite side of the street, in a building 20x60 feet. The present store has a frontage of 80x100 feet in depth. Their business is carried on by distinct departments, each devoted to one special line, and is essentially metropolitan and all-embracing. A semi-annual catalogue gives the description and price of every article. By this means what is termed the Mail Order Department has been created, and it has had a remarkable growth, extending to every State and Territory west of the Rocky mountains. The phenomenal success of this house has been attained by buying largely for several stores with which the firm is connected, at San Jose, San Diego, Los Angeles, Stockton, Salinas City, Petaluma and Sacramento. One price, cash, keeping abreast of the times in style, and small but quick profits, has been their policy and rule of action. The several members of the different firms are young, active, industrious, level-headed men, and their name, socially and in commercial circles, is rated very high.

Sacramento Business College.

The whole of the upper story is occupied by the Sacramento Business College. Mr. E. C. Atkinson, principal and proprietor, has been a public educator for 30 years, and during the years in California, over 2000 students, young men and women, have been educated for business. The comprehensive and thorough system adopted by him has given his graduates a name and fame that has been a passport for them among the leading business houses for responsible and lucrative employment.

ROYAL DUKE OF CALIFORNIA.

SAN CARLOS.

REDWOOD DUKE.

THE Oregonian says: The immigration board is having prepared a map with the location of lands yet open for pre-emption marked upon it. The following is the number of acres of Government land that yet remains unclaimed in each county: Benton, 68,000; Clackamas, 143,000;

Clatsop, 252,000; Columbia, 107,000; Coos, 325,000; Curry, 175,000; Douglass, 300,000; Linn, 448,000; Marion, 220,000; Multnomah, 28,000; Polk, 54,000; Tillamook, 663,000; Washington, 49,000; Yamhill, 53,000; making a total of 3,461,800 acres.

FISHING BY ELECTRICITY.—The idea of utilizing electric lights in fishing has now got beyond the experimental stage, not only in Europe, but in our own country, for we read that there are fishermen on the coast of Maine who are now fishing by electric lights. This is not a new departure, said a fisherman recently, but new ways of utilizing the lights have been discovered. The old way was to plunge an incandescent lamp into the water, the connection being made with some source of electricity on board the fishing vessel. When this was used in deep-sea fishing, it was found that the mains to the lamp often got foul of the fishing tackle or the cable of the vessel, thereby destroying its usefulness. A Frenchman has surmounted the difficulty by adopting a lamp worked by a primary battery, the whole of which can be thrown overboard and regained when the trip is ended. The battery consists of six Bunsen cells, in which, however, chromic acid is placed instead of nitric acid, formerly used. The cells are connected with a 12-volt Edison lamp. The success of the recent experiments presages the general adoption, by our coast fishermen, of this new discovery.

MEXICO will, the Mexican Financier holds, profit much by the construction of the Nicaragua ship canal, as it will enable vessels to sail all the way from Matamoras to Guaymas. While the canal can be used for purposes of naval defense, our contemporary does not think that this should alarm Mexico, "for the dangers of armed conflict with her northern neighbors grow less and less every day." The Nicaragua route is praised as being cheaper and healthier than the Panama. Good winds can at all seasons of the year be relied on by vessels bound for Brito, at the Pacific terminus of the Panama route, while owing to the calms, there are many months during which Panama can only be reached by steamers.

THE Grass Valley Tidings acknowledges the receipt of maple sugar made from trees in Woodpecker Ravine, east of the town.

HALE BROS.' BLOCK, SACRAMENTO, CAL.

ENTOMOLOGICAL.

Buds, Bugs, Beets and Bark.

EDITORS PRESS:—I perceive that some journals of general publication are paying considerable attention to the matter of insects which are injurious to fruits and fruit trees; and these papers have regular editors or occasional writers who give direct and positive advice to orchard people and other fruit people.

This matter of positive advice is dangerous unless the writer thereof knows positively, by experience several times repeated, that the thing which he, or she, orders to be done will work no injury in ordinary hands.

Here is an instance in point. Some years ago in Santa Clara county, Cal., at a box factory, a gentleman related in my presence how his neighbor had destroyed all the scalebugs in a large peach orchard by the use of a wash of kerosene lamp oil. I asked if the wash had killed all the scale with one washing, etc., to all of which he answered affirmatively that the scalebugs in that orchard were no more.

MORAL.—The next year the large peach orchard was so kerosene-sick that the proprietor grubbed it up.

This year another man told me that with a wash of Paris green and water, applied to his trees three times in one season, he had saved half his apple crop of 1888, near Los Gatos. To which I responded: "That's good." "Yes," says he. But I was talking to one of my neighbors not long ago and he told me he, also, had saved about half his apple crop, or maybe a little more than half, in 1888; and I (said my informant) asked him what he used on his trees and he said: "Nothing whatever."

My informant further remarked that he was getting to be encouraged with the idea that he had found the boss wash; but he did not now know whether it was the wash or other insects, or the season, or what it really was that improved his crop.

And that is about the way I have found it with washes. Sometimes I think they do great good, and then, again, I do not know. I never had but two kinds of scalebugs in my orchard—the common native willow, or convexus, scale and the oyster-shell, or *conchiformis*, scale. For these I tried various washes on the trees—sometimes different washes on different parts of the same tree—but I could not see that lye, potash, whale-oil soap or sulphur, or all three of these combined, put me much ahead. I sprayed part of a row of trees of the Gravenstein variety of apple—they being very perfect trees about 15 years of age—and polished off the tree trunks until they were very smooth and beautiful and as clean as possible. The next year by autumn-time these trees were covered with oyster-shell scale to that extent that the bark seemed to be one mass of scales. That happened about eight years ago. Along about that period—or some time previously—I began to study "bugs" more closely than I had previously done. My study led me to notice the *coccinella*, or ladybug, families, and found out that they were vigorous enemies to plant lice in general and the apple-tree louse—woolly aphid—among the rest. The red ladybug with black spots is an aphid-eater, but not very heavy on scalebugs; but there is a perfectly shiny jet-black ladybug, with two red spots, which lives and thrives on scalebugs.

Now several kinds of birds are heavy eaters of ladybugs and other beetles, so I went to cultivating and protecting ladybugs, and got along tolerably well at that, and now scalebugs are not numerous on my trees.

Somebody may ask, "How do you cultivate ladybugs?" Shoot or poison all the birds you find eating such bugs in the orchard; also plant rows of field beets in the orchard for nests and breeding-places for the bugs. Go into the beet-fields and carry the ladybugs, as you find them there on the beet plants, into your orchard and locate them on your orchard beets. I have never seen a ladybug eating beets, or beet-tops, but I have counted as many as 30 of such bugs on one beet plant, particularly upon the yellow ball mangel-wurzel. The leaf-stems of the beet fit together in a way that gives hiding-place for the bugs as against the birds. There are other plants upon which ladybugs can be colonized, but I prefer field beets. I wish that some man or woman—perhaps it better be a woman, a young woman, and it will do her beauty no harm—who is a good bird-shooter, which I am not, would shoot several specimens of all orchard birds, at different seasons of the year, and, cutting the birds open, examine their craws and stomachs to find what, if any, kind of insects they eat, and keep a carefully written account of the facts for publication in the Rural Press and other journals. After that I would urge that every bird in which shall be found the remains of the red or black ladybug shall be kept out of the orchard, by sudden death or otherwise—if there is any other wise—because it is my opinion, gently expressed, that a ladybug is of more use in an orchard than any bird which eats ladybugs; but even here again it may be well to be careful, because if a bird, such as the wren and woodpeckers, destroy noxious insects more than they do useful insects, it may be well to go slow. Some birds, such as swallows and house-martens, do not digest the external wings—the shell wings—of the beetles, and in the manure of these birds

near the roosting-places, may be found the wings of many kinds of beetles.

I encourage and protect a large colony of mud-housing swallows, who build their mud huts under the upper platform of the windmill tower on my place, and, although they feed exclusively upon winged insects, I have not found the wings of the red ladybug in their deposits, although there were the wings of beetles of various kinds. I do not think the black, two-spot ladybug goes enough on the wing to be often caught by flying birds. In fact I have watched the two-spot bugs on a tree for a week at a time, from day to day, and never saw one move an inch while I was looking at it. But it moved all the same, and mowed a swath of scalebugs as it went. How do I know that I had watched the same bugs from day to day? A small speck of white lead on the bug's back settles that question.

I have read and listened to much advice urging that the old curled bark must be carefully scraped off the fruit trees to prevent the housing of insects, and, in pursuance of that advice, I have looked under the old bark as many as a thousand times. What did I find under there? I found mostly those insects which feed upon other insects—under the bark hiding from birds—though I at times found there some scalebugs, yet very seldom the cocoon of a moth of any kind. The latter was most particularly the case where the woodpeckers were numerous.

Even on this 17th of March, the same being Sunday, and also Saint Patrick's day in the morning—better day better deed—I, with two assistants, inspected the bark of about 100 old apple trees, and we jointly found eight codlin moth cocoons, and each of them was not so much under the elevated bark as in cracks alongside, or among the curled pieces of dry bark. I make no strong objection to knocking off the old bark, but consider that it is not a matter near so important as some, even many, people say that it is.

J. W. GALLY.

Watsonville, March 17, 1889.

QUERIES AND REPLIES.

Pomegranate Better Than Cactus.

EDITORS PRESS:—In regard to the cactus hedge I would say: I have had 15 years' experience with the large, flat-leaved, sweet-fruited cactus, and as a hedge plant it is a failure. It grows from 10 to 12 feet high. Every few years the frost makes it shed its leaves and they all take root and grow. The only way to destroy them is to burn them. Last winter killed all the old trunks, but the leaves on the ground are growing vigorously. In Australia the birds eat the fruit and scatter the seed all over the bush. It is a great nuisance in the Hunter river country, and they are paying \$15 per acre to have it grubbed out and burned. For California use, the fruiting pomegranate is the best hedge plant I know of. It will make a chicken and hare tight fence and requires very little attention. It is very easy to raise from cuttings.—ISAAC LEA, Florin, Sacramento Co., March 3d.

Mr. Schaeffle's Squirrel Poison.

EDITORS PRESS:—In your issue of March 2d, current, the above-named gentleman gave an excellent recipe for a squirrel poison; yet changing of one item would improve it by making it more attractive to the "varmints." In place of oil of peppermint, I would put oil of rhodium. Old trappers and hunters of deer say that if the hunter rubs himself well with oil of rhodium, the deer will almost walk up to him, so much do they like the smell of this oil. I have sold hunters this oil for trapping deer and coyotes. Hence it is reasonable to believe that there is some element of fact in their statements, but I am not aware that any animal is particularly fond of peppermint.—G. F. G. M., Olema, Cal.

Caution to the Unwary.

EDITORS PRESS:—I wish hereby to put the public and the farming community on their guard against a swindler. He worked my neighborhood last week and got the best of a good many. He is a German; claims to be from Hanover, about 32 years old, a very fluent talker, has a boy of about 19 years with him. He wears a Masonic badge and drives a pair of lean horses to a sort of a covered wagon—resembles a butcher-wagon. His first move is to tell you that he is selling bankrupt goods; then he tells you that he sells calico at 1 1/2 cents per yard, gingham 2 cents, table linen 25 cents apiece, fancy tablecloths 50 cents, etc. That part is all right, but look out when he comes with the cloth. There is where the swindle lies. On that part I pronounce him a liar, a swindler, and a thief. GUSTAV BROWN.

Hollister, San Benito Co., Cal.

How IT WORKS.—If we were to put a two-line local in the most obscure corner of the paper, which stated that a certain business man charged more for his goods or kept an inferior quality than his competitors, that man would employ a bull-headed slugger to come around and kill us the next morning. But if we were to ask that same man for an advertisement of his wares, he would say: "No; I don't believe in advertising; no one reads the papers."—Exchange.

HORTICULTURE.

California State Horticultural Society.

Important Discussion Announced.

A few days ago we were called upon by Mr. A. L. Bancroft, a member of our society, who submitted a well-matured plan for grading, packing and marketing of fruit, particularly of dried fruit. We consider this plan much the best of any which has so far been presented, and one which we believe would place the marketing of California dried fruit on a satisfactory and progressive basis.

If no time is lost, much can be accomplished the coming season. After submitting the matter to the Board of Directors it has been decided to postpone for one month the subject selected for the meeting of March 29, 1889, and consider Mr. Bancroft's plan for

Grading, Packing and Marketing Dried Fruits.

This question should be considered, discussed and acted upon at once if anything is to be effected during the year 1889.

We believe it would be greatly to the advantage of the dried-fruit interest if every person engaged in the growing, packing, or marketing of fruit, whether members of the society or not, would meet and act upon this matter now, and we trust that every member will be present, and we invite all interested who are not members to meet with us and take part in the discussion.

The meeting will be held on Friday, March 29th, at 1 o'clock P. M., at the offices of the State Board of Horticulture, 220 Sutter street, San Francisco.

E. W. HILGARD, President.

E. J. WICKSON, Secretary.

Information Wanted About Fruit-Houses.

EDITORS PRESS:—Through the medium of the Press many mutually useful hints are given by readers in reference to experience in care of trees, fruit, etc. Inasmuch as the question of putting fruit in market in good shape involves (in the late varieties of apples and pears) careful handling and proper storage, so as to keep the plump, full and fresh appearance up to date of delivery, this question, how to build a proper house for late fruit, is one that will interest many; the best way to put up the fruit—in bins or on trays—to pack in straw, bran or sawdust, and in fact dozens of plans followed by so many different people. Should the house be in a shady place off the ground, or built on it without floor, aired at top or sides, etc.? I could go on and enumerate again many ways suggested by well-wishers. The views of some good, practical, experienced man would be of great value to many on this subject, and in our county I know would be well appreciated, as we come in with our produce somewhat behind the first, and with late varieties of the harder keeping kinds can hold fruit far into the winter and over until spring.

The subject of cold storage, if it be possible to establish on a basis which would warrant the erection of a plant for a producer of fair amounts of fruit, would be worth inquiring into.

EDWARD N. MOOR.

Lafayette, Contra Costa Co., Cal.

[We shall be very glad to have these subjects discussed and to have drawings and descriptions of any fruit-houses which our readers find satisfactory.—EDS. PRESS.]

Books and Authors.

BY C. L. B.

ESPECIALLY welcomed by lovers of literature and literary workers is the new "Magazine of Poetry," an illustrated quarterly just issued by Chas. W. Moulton of Buffalo, N. Y., who has certainly added a literary gem to our periodical literature.

An entertaining and instructive visitor to the home circle, and one especially interesting to the ladies of the household, is *Peterson's Magazine*, with its opening steel engraving, colored fashion-plate and patterns, work-table designs, household hints, and attractive stories and poems. Where once received, the magazine is sure to be welcome as a regular visitor.

IN "WHAT DREAMS MAY COME," published by Belford, Clarke & Co., Mrs. Atherton has given us an interesting psychological study, touching on the now popular theory of reincarnation in a way that claims attention albeit 'tis not in strict accordance with the real tenets of the belief, since the theosophist does not recognize any remembrance or recognition in the present state of a previous existence as do the hero and heroine in "What Dreams May Come" when he and she discover that they are in reality his grandfather and her grandmother, and expiate their sins. Yet the story is well written; and however the reader may differ from the theories therein advanced, he will recognize the talent of the author.

CLYDESDALES, NORMAN AND ENGLISH SHIRE. No reader of the Rural who cares for noble draft horses will forget the peremptory sale advertised for the 26th inst. by Killip & Co.

The Late Legislature.

We give below a few brief extracts from some of the leading journals of the State regarding—we could scarcely say "respecting"—the Legislature which adjourned *sine die* between 1 and 2 o'clock last Sunday morning:

The *Chronicle* remarks: It stands without a rival for entire disregard of the wants and needs of the people of the State and for criminally reckless extravagance. As to the usual offenses charged against a Legislature, such as the acceptance of bribes, the violation of solemn pledges, and the prostitution of personal honor and integrity, the record stands open, and every citizen of California can draw his own conclusions. * * * Neither party has any reason to be proud of its legislators, taking them as a whole, while, on the other hand, each party was represented by a few men who were an honor to the State and to their constituents. * * *

San Francisco has no reason to be proud of the delegation which misrepresented her in the recent Legislature.... Ignorant, narrow-minded, prejudiced and purchasable are terms that may be applied with strict justice to the great majority of them. * * *

It is not known yet what the net result is, but it is certain that the enormous and extravagant appropriations must increase the rate of the tax levy for the next two years, and that the raid upon the State Treasury has been unexampled and conscienceless.

The special correspondent of the *Bulletin* says:

If the passage of the Election Reform bills, the prison investigation and a few minor appropriations are excepted, the work would better have not been done at all. With 14 purchasable votes in the Senate and 30 in the Assembly the lobby took possession of both branches almost before they were organized. Boss Buckley brought here all the lambs who had been thrown out of employment by his reverses in San Francisco, and foisted them upon the Legislature. Many of them have never appeared since their appointment except to draw their salaries, and the others merely remained here for the purpose of promoting some steal. * * * A greater number of rascals than were elected to this Legislature never assembled under the dome of the Capitol. They passed laws in defiance of the Constitution and spat upon decisions of the Supreme Court with the bravado of the hoodlum.

The Sacramento *Bee* declares that, although it is the custom to speak of each succeeding session as the worst, it is safe to say that the session just closed has displayed more brazen rascality, more shameless disregard of every shred of principle, more outright barter of every remaining fragment of honor, more reckless prostitution of female clerks, more open and notorious adultery on the part of members, than have ever before disgraced a Legislature. The honest members were like angels' visits, few and far between. The virtuous women were so lost sight of in the general licentiousness that even their names became tainted by the breath of slander. * * * The session closed amid orgies that would have put to shame the Bacchanalian feasts of the old Romans, and made even the painted visitors to the Jardin Mabille blush in very shame. * * * But all evil things have an end, and the legislative rascals and breakers of the Seventh Commandment have departed from our midst. Thank God for the relief!

Among those figures which stand out in bright and honorable contrast to the general darkness and disgrace of the picture, none is more striking than that of the Governor. His lively sense of official responsibility, his manly rectitude and sturdy faithfulness to convictions of duty, have been such as to command the respect of honest citizens of all parties, even when they differed with him in judgment, and jobbery has been disgusted at his rugged integrity.

Sierra Valley Cheerful.

EDITORS PRESS:—We have had, and are having, one of the most beneficial storms our mountain country has ever been blessed with. It had been the driest winter, the loveliest winter in the history of this valley, but as the season for storms was fast passing away grave fears were entertained; all business came to a standstill; farmers could not plow; the logging camps were stopped. There was no water to run mills, no water for miners, and the general outlook was very gloomy. But the Allwise Providence cleared away man's doubts and anxiety by sending the much prayed-for and much-needed snow and rain. On the morning of the 12th it commenced raining and snowing alternately, and still continues. There is now a heavy fall of snow in the mountains, and the valley is almost a sea of water, insuring the finest of crops and a successful lumber season, and gladdening the heart of the miner. The gloomy forebodings are things of the past, and instead we meet cheerful, happy faces, cordial greetings and anticipations of a bountiful fruit crop, as the choicest of apples, plums, pears, cherries and berries are prolific here. The dairy interest is increasing every year, both in butter and cheese, and this season promises to be one of the best and most productive.

MRS. E. J. STEPHENS.

IMPORTANT ANNOUNCEMENT!

PEREMPTORY SALE

—OF—

English Shire, Clydesdale and Norman Stallions,

—AND—

CLYDESDALE MARES,

At 1 P. M., Tuesday, March 26, 1889,

—AT—

BAY DISTRICT TRACK.

By direction of Mr. I. Trestrail we will offer his consignment of THOROUGHbred CLYDESDALE STALLIONS and MARES, comprising eight head. These are the most superior lot of Clydes ever imported to California.

We are also instructed by Mr. Morgan of Cheyenne to dispose of his consignment, consisting of four ENGLISH SHIRE STALLIONS and four NORMAN STALLIONS. These horses have been selected expressly for this market and are in every way desirable animals.

This will form the most extensive sale of stallions that has ever taken place in California.

The horses are now at Bay District Track and may be seen at any time previous to sale.

838 Market Street, - San Francisco.

ON 30 DAYS' TRIAL.

THIS NEW ELASTIC TRUSS

Has a Pad different from all others, keep shape, with Self-adjusting Ball in center, adapts itself to all positions of the body, while the ball in the cup presses back the intestines just as a person does with the finger. With light pressure the Hernia is held securely day and night, and a radical cure certain. It is easy, durable and cheap. Sent by mail. Circulars free. BULLSTON TRUSS CO., Chicago, Ill.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorety, 529 Commercial St., S. F.

S. F. MARKET REPORT

Market Review.

DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 20, 1889.

Continued rains up to to-day interrupted general trade in farm products, but operators console themselves by claiming that with settled weather and improved roads more life will be thrown into business, which, backed by a feeling of confidence that the future holds out a hope for a very prosperous year, will create as a rule better markets. With clearing skies to-day, bucksters and other buyers of cheap fruit and vegetables were out in force cleaning up the market of all undesirable parcels for carrying in store. The cereal market has exhibited a fair degree of activity in both samples and futures. The wheat market here has held fairly firm in the face of drooping values at the East and abroad. The following is to-day's cable:

LIVERPOOL, March 20.—Wheat—Very flat. California spot lots, 7s 4d to 7s 7d; off coast, 37s; ship, 37s; nearly due, 37s; cargoes off coast, very dull; on passage, very little demand; Mark Lane wheat, weaker; English country markets, very slow and occasionally cheaper; French, steady; wheat and flour in Paris, quiet.

Foreign Grain Review.

LONDON, March 18.—The Mark Lane Express says: English wheat values are lower, and it is impossible to effect sales. Flour is weak, although the supply of foreign is moderate. In London, barley has declined a fraction. In a majority of the country markets, prices have hardened. The large quantity of corn caused a weakness in some cases, while in others prices are in the seller's favor. Oats have improved. At to-day's market English wheat was in moderate request at last Monday's prices. Foreign is weaker. Flour is unchanged. Oats advanced 3d. In the very latest dealings breadstuffs and corn were weaker.

Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	Apr.	May.	June.	July.	Aug.
Thursday....	78 3/4d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Friday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Saturday....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Monday.....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d
Tuesday....	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d	78 1/2d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday....	37 1/2d	37 1/2d	37 1/2d	Quiet.
Friday.....	37 1/2d	37 1/2d	37 1/2d	Quiet.
Saturday....	37 1/2d	37 1/2d	37 1/2d	Slow.
Monday.....	37 1/2d	37 1/2d	37 1/2d	Inactive.
Tuesday....	37 1/2d	37 1/2d	37 1/2d	Slow.

Eastern Grain Markets.

The following shows the closing prices of wheat in New York for the past week:

Day.	Mar.	Apr.	May.	June.
Thursday.....	92 1/2	92 1/2	92 1/2	92 1/2
Friday.....	92 1/2	92 1/2	92 1/2	92 1/2
Saturday.....	92 1/2	92 1/2	92 1/2	92 1/2
Monday.....	91 1/2	91 1/2	91 1/2	91 1/2
Tuesday.....	90 1/2	90 1/2	90 1/2	90 1/2

The closing prices for wheat have been as follows, at Chicago for the past week:

Day.	Mar.	Apr.	May.	July.
Thursday.....	95 1/2	95 1/2	95 1/2	95 1/2
Friday.....	95 1/2	95 1/2	95 1/2	95 1/2
Saturday.....	95 1/2	95 1/2	95 1/2	95 1/2
Monday.....	95 1/2	95 1/2	95 1/2	95 1/2
Tuesday.....	95 1/2	95 1/2	95 1/2	95 1/2

NEW YORK, March 20.—Wheat—91 1/2c for cash, 91 1/2c for May, 92 1/2c for June and 91 1/2c for July.

CHICAGO, March 20.—Wheat—94 1/2c for cash, 96 1/2c for May, 92c for June and 85 1/2c for July.

Eastern Wool Market.

NEW YORK, March 15.—Business is quiet in all of the wool markets, with prices in buyers' favor, on the whole 1/2c @ 1c lb lower than last week. Two opposing forces are at work in the market. On the one hand heavy woolen goods are not selling so well as they were expected to, and go at low prices, so that manufacturers are taking supplies only for their immediate wants. Stocks of wool, on the other hand, are very light, and the prospects of obtaining supplies next summer at anything less than values now current are slight. The consequence is that the market continues about steady, though very dull. Here and there dealers are ready to close out at concessions, while others continue to hold with confidence what material they have in store. More or less business in sample bags is reported.

At Philadelphia, wool is moving slowly, but the market is steady; there is more inquiry, but the reselling business is small, because manufacturers' bids are generally a little below the views of holders.

BOSTON, March 15.—The aggregate sales of wool for the week indicate more activity than for a few weeks previous, but the tone of the market, as reported by dealers, shows no improvement, and holders seem more disposed to meet the views of buyers. On finest grades of washed fleeces the market is perhaps as strong as ever, but only small lots of these remain unsold. For all other kinds of domestic dealers are willing to accept any reasonable bid rather than let a good customer go, and the consequence is that concessions in several instances have been made. The season for cleaning up has arrived, and nearly all who have been holding back for full rates are now ready to meet the market. Although several manufacturers have been around, they do not seem to be eager to buy large lots, and claim to have enough wool to cover the bulk of their contracts for the remainder of the season. The transactions have been mainly in pulled, scoured and Territory wools, and include numerous small lots of various grades. Total sales, 2,462,500 lbs.

The Average Condition of Winter Wheat

CHICAGO, March 17.—The Farmer's Review says: March, the interregnum between winter and spring, is probably the most trying month of the year to the winter wheat crop. This year, owing to the lack of

snow in many States, and the remarkably mild open winter experienced thus far, the season is particularly critical. Should a sudden freeze take place, the damage would be very great. As it is, quite a percentage of the crop in several States has been winter-killed. Making all due allowances, however, for these reports, the general average condition for the winter wheat belt as a whole is fair to good, and the prospects for a good crop are by no means discouraging.

Miscellaneous.

NEW YORK, March 16.—Transactions in hops are moderate enough, but doing sufficient to support the full last figures. Dealers say: "Beer weather is coming and the market will keep."

Pacific raisins are going out at \$1.25 @ 2.15; crowns, \$2.20 @ 2.60.

Since the holders of Pacific prunes have dropped prices so as to compete with similar classed French goods, there has been a good inquiry.

For the first time in a long period mustard seed shows animation, and better prices will probably be named next week.

California dry hides are firm at 16; the stock is light and the general market is in good shape; best foreign, 17; Central American, 12 @ 15; lowest grade, 11.

Local Markets.

BAGS—Holders influenced by continued favorable crop weather have advanced their asking prices for Calcuttas to 7 1/2c for spot, 7 1/4c for June, and 8c for July. It is claimed that some outside parcels can be secured at a slight shading on the above quotations.

BARLEY—The sample market has been quiet. The low figures to which prices sunk previous to rain, caused only a slight shading under improved crop prospects. Shipments of the better grades are being made to Australia. The supply of choice to extra choice in this State is light. In futures, trading the past week was fair. The fluctuations were slight. The following are the sales reported made at to-day's call:

Morning Session: Buyer 1889—200 tons, 88 1/2c. Buyer season—100 tons, 78 1/2c. Afternoon Session: Buyer 1889—100 tons, 88 1/2c; 400, 88 1/2c; 100, 88 1/2c. Buyer season—100 tons, 78 1/2c; 300, 78 1/2c @ cwt.

BUTTER—Continued heavy receipts and strong selling pressure cause the market to rule in buyers' favor. At the low prices the consumptive demand is increasing. The daily papers note with satisfaction the shipment in last month of over 77,000 lbs. of butter overland. The butter shipped was creamery, sent to Los Angeles and this city last winter, for which there was no market on this coast. No California butter has been shipped overland.

CHEESE—The market still tends in buyers' favor, under free receipts. The demand is increasing.

EGGS—The consumption steadily grows, and as receipts are not so free, the market shows a stronger tone. With better roads, it is claimed that receipts will increase.

FLOUR—The market is steady, with a good home demand and a fair export inquiry.

WHEAT—There has been quite a demand for choice white milling grades of wheat for shipment to Australia. It is said that fully 8000 tons have been placed at prices ranging from \$1.41 @ \$1.46 1/2. The market for sample parcels holds strong for both shipping and milling. In futures, dealing the past week was quite active, with lively and attractive fluctuations noted. The following are the sales reported at to-day's call:

Morning Session: Buyer 1889—300 tons, \$1.41 1/2; 300, \$1.41 1/2; 500, \$1.42. Seller 1889—100 tons, \$1.39 1/2. Seller 1889, new—100 tons, \$1.31 1/2; 100, \$1.32. Buyer season—300 tons, \$1.39 1/2 @ cwt. Afternoon Session: Buyer 1889—600 tons, \$1.41 1/2; 500, \$1.41 1/2; 2000, \$1.41 1/2. Seller 1889, new—600 tons, \$1.31 1/2. Buyer season—300 tons, \$1.39 1/2; 300, \$1.39 1/2; 500, \$1.39; 600, \$1.39 1/2; 100, \$1.39 1/2 @ cwt.

Cereals.

The London Agricultural Gazette, February 25th, says: Since the commencement of the past week the weather has again assumed a more wintry character; not much rain has fallen, but cold storms of snow and hail have been pretty general and frequent during the last few days, with a searching northeasterly wind. Under these circumstances the land has dried considerably, and some pulse, with an occasional field of oats, has been seeded; but nothing stronger than a light loam is yet in form for barley. The stale furrows will, apparently, work well as soon as they are dry enough, the frost having been sufficiently severe before the snow came to disintegrate them. So far the wheats do not appear

to have taken any damage, and they will not be more forward at the end of the month of February than they were at the beginning—when they were not forward enough to take harm from ordinary cold during February and March. Very much of the native wheat on offer has been threshed some time, having been held against falling markets by dealers, and the condition of the great bulk of it is such as to require constant turning on barn-floor or granary-floor to keep it sweet; in fact, much of it is now in a state which proves to owners the truth of the old adage "first loss the cheapest." If the month of March should be a windy and drying one it is tolerably certain—from present evidences—that grain stacks will open in greatly improved condition. Country flour has been delivered rather freely of late, but values have not been quotably changed; demand during the week has been fairly good, but a reduction in the London "top price" is thought by some to be imminent. The trade for malting barley remains much depressed; the season is getting on, and no fine stuff offering at home or abroad at present. A cold and late spring would, doubtless, carry the maltings on, but the color of the native crop is such as to prevent the manufacture of malt expressly to hold over at present.

The following table of monthly rainfalls at Sacramento, as furnished by the Signal Service, taken in connection with the average wheat yield by seasons, is of particular interest in going to show the probable outcome of the wheat crop this year:

*Rainfall up to 5 A. M. on the 19th.

†Total for this season to 5 A. M. on the 19th.

The rains of November and December prepared the lands for plowing for a large spring seeding, which was taken advantage of by farmers in the spring wheat districts, so that the acreage seeded to wheat this season is the largest on record. The winter's returns indicate that the total acreage in wheat is not short of 3,500,000 acres, and may even go above 3,600,000. In 1880, when the crop reached 35,000,000 cents, the total acreage to wheat was only 2,100,000. The outcome this year of necessity depends very much on the character of the weather in April and May.

The local wheat market held to firm prices throughout the past week. Contrary to the usual order of things, the heavy rains did not shade values much, which goes to show that stocks must be well in hand. A leading miller bought some gilt-edged the past week at \$1.45, which he considered to be from 2 1/2c to 3 1/2c under the market. Some quiet buying is reported to have been made by exporters to Australia. The grades wanted were from choice to gilt-edged. The price paid ranged from \$1.45 to \$1.50, although some is said to have been taken in at a lower figure than \$1.45. Shipments for Australia are going forward by steamer and sail. There are three sailing vessels under charter to load. For European shipment, two vessels were taken up the past week. An exporter bought last Monday a round parcel of good to choice shipping at \$1.42 1/2.

Barley has ruled weak, under light trading and reports of good crop prospects. A sample of this year's, in stalk, was exhibited on "Change the past week. The field of grain from which it was taken, it is said, will be ready for harvesting by the middle of April. Some shipments of the more choice grades of bright are being made to Australia.

It is claimed that the high water in the Sacramento and San Joaquin rivers has flooded large tracts of land which gave, for several seasons past, good crops of grain.

Corn has held fairly steady under light receipts and a moderate trade call. The outlook at present is favorable for a large crop in this State.

Oats eased off still more the past week. The shading in prices is said to be due to the light call and free receipts.

In buckwheat and rye there is nothing new to report.

Australian mail advices are confirmatory that California wheat is wanted for mixing with off-colored and damp wheat drawn from the New Zealand surplus. The mail advices also report the flour market depressed.

Fruit.

Eastern apples have a firmer tone for the more choice.

Receipts of oranges continue heavy, yet the market does not show any lower prices, except for poor keepers. Naturally, with free rains, the keeping quality of oranges is poor, which necessitates, at times, concessions in prices to save heavier losses. The consumption is said to be larger than ever. Shipments to the East are increasing.

It is feared in certain quarters that the heavy rains and high winds will lessen the fruit crop, owing to the destroying of the pollen in many of the blossoms. If this shall prove to be the case, what will be lost in quantity will be made up in quality and size.

Heavy imports of Mexican limes have shaded prices for both limes and lemons. Owing to rains and unfavorable weather, the demand is only fair.

The movement heretofore noted in dried fruits is still continued. The supply is said to be quite light, not more than enough to meet the coast trade, provided the latter is up to former spring requirements. The tendency appears to be to stronger prices.

In raisins, there is nothing new to report. Choice to extra choice are in limited supply. The feeling appears to be that values will appreciate before the close of the season.

G. W. Meade has just returned from a business trip to the East. He reports an increasing distribution demand for dried fruits, brought about by the low range of values that obtained in the leading distribution centers in the Eastern and Central States.

Feedstuff.

Ground feed continues slow, with prices favoring buyers. The stock on hand is said to be quite large for the time of the year. This has more particular reference to bran and middlings.

Hay holds fairly steady. This, it is claimed, is due to the storm curtailing farmers' deliveries. The consumption in this and neighboring cities is reported to be quite free.

Live-Stock.

The market continues weak and unsatisfactory for bullocks and mutton sheep. Offerings continue few, with the consumption not quite so large. Calves and lambs are weaker. Milch cows hold firm, notwithstanding the low prices ruling for butter. Hogs are still scarce. The prospect of large cereal crops makes it almost certain that good prices will obtain for stock hogs well into the year. For horses there are no changes to note, the weather being against active trading in them.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent.]:

HOGS—On foot, grain fed, 6 1/2 @ 7c lb.; dressed, 9 1/2 @ 10c lb.; soft, 5 1/2 @ 6 1/2c lb.; dressed, 8 @ 9 1/2c lb. Stock hogs, 4 1/2 @ 5 1/2c lb.

BEEF—Stall fed, 6 1/2 @ 7c lb.; grass fed, extra 6 @ 6 1/2c lb.; first quality, 5 1/2 @ 6c lb.; second quality 4 1/2 @ 5 1/2c lb.; third quality, 3 1/2 @ 4 1/2c lb.; bulls and thin cows, 2 @ 3c.

VEAL—Small, 5 @ 7 1/2c lb.; large, 5 @ 6 1/2c lb. MUTTON—Wethers, 6 @ 6 1/2c lb.; ewes, 5 @ 6c lb.; lamb, spring, 9 @ 12 1/2c lb.

Vegetables.

New potatoes hold to steadier prices. The rains have created a stronger feeling among growers not to dig much for market yet, but let the potatoes attain larger size. The high water in the rivers will, it is thought, cut off a large source of supply for this market. Old potatoes hold to fairly steady prices, with choice, well-conditioned reported having a firm tone.

Choice, well-selected onions hold to stronger prices. Poor are slow and moved with difficulty. The outlook for this year's crop is said to be quite satisfactory, both in this State and Nevada.

Seasonable vegetables are in liberal receipt, with prices showing a slight shading on last week's closing. The consumptive demand is increasing as prices ease off.

This year's cabbage is on the market, but as yet they only meet the local trade.

Miscellaneous.

From the Commercial News of March 19th, the following summary of tonnage movement is compiled:

	1889.	1888.
On the way to this port.....	197,390	251,259
On the way to neighboring ports.....	43,518	120,584
In port, disengaged.....	38,334	44,477
In port, engaged for wheat....	36,032	22,504

Totals.....315,274 438,824

To get the carrying capacity, add 60 per cent to the registered tons as given above.

From July 1st to March 19th, the following are the exports from this

California Products at Chicago.

CHICAGO, March 20.—California oranges are easier, owing to free offerings at auction yesterday, and Messinas rule quiet, dull and slow. At the auction sale, transactions at the following prices took place: California Navels (Washingtons) sold at \$4 @ 4.50 # box; Duarte and Treston Navels, \$3.25 @ 3.75; Mountain Seedlings, \$2.50, and Duarte and Anaheim at \$2.25 @ 2.50. A car of heated stock sold at \$1.40 @ 1.90. Total sales were about five cars. Street quotations were as below: California Riverside, # box, 176 in box, \$3; do, do, 126 to 150 in box, \$2.75 @ 3; California San Gabriel, # box, \$2 @ 2.50; California Duarte, \$2.25 @ 2.50; California Navels, \$3.25 @ 3.50; do (Washingtons), \$4 @ 4.50.

The California dried fruit market has become weak again, as sales at reduced prices yesterday plainly show. Arrivals lately have been somewhat more liberal, while the demand has remained restricted. Present prices are as below given:

Apricots—Evaporated, bleached, bxs, # lb, 11 @ 12c; do, sun-dried, according to quality, 6 @ 8c. Peaches—Evaporated, bleached, unpeeled, bxs, 8 @ 9c; do, sun-dried, bleached, unpeeled, bxs, 6 @ 7c; do, sun-dried, unbleached, unpeeled, bxs, 5 @ 5 1/2c; do, sun-dried, peeled, bxs, 10 @ 12c; do, do, bxs, 10 @ 10 1/2c; do, evaporated, peeled, bxs, 12 @ 13c. Nectarines—White, evaporated, bleached, bxs, 7 @ 8c; do, sun-dried, bleached, bxs, 7 @ 8c; do, red, evaporated, bichd, bxs, 6c; do, red, sun-dried, bichd, bxs, 4 @ 5c. Plums—New, pitted, sacks, 6 1/2 @ 7c; new, unpitted, sacks, 4 @ 7c. Prunes, according to size, in bxs, and dry, 5 @ 9c; do, damp, 3 @ 4c; do, Silver, 10 @ 12 1/2c; do, Hungarian, bxs, 3 @ 5c.

Raisins—Loose Muscatels, new, # box, \$1.35 @ 1.65; do, London layers, new, \$1.65 @ 2.

The hop market rules firm. Sales are not large, but there is a steady business and trade is fully as good as can be expected for this time of the year. Stocks are rather light and prices range as below: Washington Territory, best, 24c; good to prime Pacific Coast, 20 @ 22c; fair to good do, 18 @ 20c.

Beans remain steady, with a moderate sale. Mediums are quiet. California pea beans, \$1.75 @ 1.80 # cti; do, Lima, 5 1/2 @ 6 # lb.

Fresh California cauliflower quotable at \$2 @ 4 # doz, according to quality.

TWENTY STALLIONS

Reserved for the Spring Trade of 1889.

Will be Placed on Sale March 25th.

20 PERCHERON and FRENCH COACH STALLIONS—all choice animals—Prize Winners at the Three Great Shows of France, 1888, as follows: That of the Societe Hippique Percheronne at Nogent-le-Rotrou, the Government Show at Alencon, and the Horse Exhibition of Paris.

I have found each year that a number of my customers could not conveniently buy until late in the season, and it was to accommodate these that I last Fall made a reserve of TWENTY of my BEST STALLIONS, old enough for service, which will be placed on Sale March 25th, 1889, it being my determination to so control my importations that I can offer purchasers a first-class horse any day in the year.

A Satisfactory Breeding Guarantee given with each Animal Sold.

NEVER EXCELLED

For Light Draft.
For Powerful Cutting.
For Simple Gearing.
For Well-Fitted Cutter Bars.
For Ease of Management.
For Durability.

This machine is the latest addition to our line of Mowers. It is extensively used, and is a most brilliant success. The cutting apparatus is entirely new. In building this machine we have overcome all the defects common to all other Mowers, and have met the most recent demands of the most critical and exacting farmers.

THE McCORMICK LIGHT DRAFT DAISY REAPER.

The Best in the World. Price, \$110.

THE CELEBRATED RANDOLPH STEEL HEADER.

BUY THE RANDOLPH

BECAUSE IT IS THE BEST.
BECAUSE IT IS EASIER DRAFT ON THE HORSES.
BECAUSE IT SAVES ALL THE GRAIN.

Cuts close to the ground or high. Guaranteed to elevate anything which can be cut, and dispenses with the man found in all other headers assisting the draper to elevate. The successful farmer buys the best. The RANDOLPH factory builds more and sells more Headers than all the other factories combined. It is at the top and is going to stay there. 8, 10, 12 and 14 feet. Write for Prices.

The Weyhrich Single-Geared Illinois Header.

Last fall we purchased a few of the celebrated WEYHRICH HEADERS at receiver's sale, and at astonishingly low figures, so that we are able to offer you a first-class machine at a price never before offered.

These Headers are well known and speak for themselves. The prices are not cash and on receipt of the amount stated below (no discount), we will place one of these Headers free on board cars, guaranteed that it is complete and in good condition, but there our responsibility ceases.

12-ft. Weyhrich Header, 40-in. Drapers, former price \$375, if ordered now, \$160.

14-ft. Weyhrich Header, 40-in. Drapers, former price, \$400, if ordered now, \$175.

We have but a few in stock, so orders must be placed early.

THE WEYHRICH IS THE BEST SINGLE-GEARED HEADER.

SHERWOOD'S NOVELTY STEEL HARNESS.

Plowing a pleasure, and reduced to scientific principles. Over ten thousand sets now in use. For logging it has no equal. For the scraper it is so handy. No traces or whiffletrees to bother team or driver. For hauling stone or manure on the farm it is perfection. Do not hesitate, but order a set at once. You stand no risk in buying. If harness is not exactly as represented, we will pay the freight both ways and return you the \$17.50. Used and indorsed by the largest Orchardists, Farmers and Vineyardists in the State. Sent on trial. Price, \$17.50 per double set, without bridle, lines or collar. Cash must accompany the order, or sent C. O. D.

We have the Largest and Finest Carriage Repository on the Pacific Coast. CARTS in great variety. AGRICULTURAL IMPLEMENTS of every description. Write for our No. 14 Catalogue. ADDRESS:

TRUMAN, HOOKER & CO., 421-427 Market St., S. F.

In any place where
my Windmill is not
now in use.

I WILL PLACE THE IMPROVED DAVIS ON EVERY HOME IN THE STATE.

READ WHAT PEOPLE SAY WHO HAVE USED IT.

STOCKTON, CAL., March 5, 1889.—R. F. WILSON—DEAR SIR: I consider the Improved Davis Windmill superior to all other Windmills. It will run with very little wind, is very simple and compact in construction, does its work well, and is a good regulator. One of the best points is that there is no expense for repairs, and very little attention as to keeping the bolts tight, there being less bolts in it than any mill I ever saw. The storms do not injure it in the least, as it will turn away from the wind when it blows a gale, and will return and face it when the wind is moderate. It is strong, simple, durable and a good regulator. Yours truly,

JONES RANCH, March 6, 1889.—MR. R. F. WILSON—DEAR SIR: I feel it my duty to write you these few lines in regard to your Windmill. After trying a number of different mills, without being satisfied with any, two years ago I called at your shop to examine yours and purchase one. Since that time I have bought six for our ranch and one for my own use at Merced. Some of the mills are raising water 150 feet, and the whole lot have not cost one cent for repairs, except for oil. They regulate splendidly in all kinds of storms, and run with less wind than any of our other mills. I need not wish you success, for any person who buys one will never have any other kind. Yours respectfully,

CHARLES KELLEY, Supt. for J. W. Jones, San Joaquin and Stanislaus Counties.

Rattletrap Windmills Doomed!

You cannot resist buying when you get my prices. Get informed through disinterested parties. The Improved Davis has driven all competitors from the great San Joaquin Valley.

SINGLE COPIES, 10 CTS.

Mossbrae Falls.

We present on this page a photo-facsimile of a scene of rare natural beauty and of exceptional interest in the peculiar methods of Nature's work which it embodies. The scene is situated

rived from the melting ice and snow of Shasta flows down its flanks on the surface. Probably 99 per cent of it is at once absorbed and drained away beneath the porous lava folds of the mountain to gush forth, filtered and pure, in the form of immense springs, so large, some of

water is very striking, and colors the entire stream, with the exception of the portions broken into foam. The color is chiefly due to a species of algæ which seems common to springs of this sort."

Such grand springs are frequent in the Shasta

These beautiful descriptive lines by Mr. Muir will add to the interest of our engraving, and will give an intimation perhaps of the treasures of the Shasta region and of our other mountain districts. Railways and improved carriage-roads are making these places more ac-

MOSSBRAE FALLS, NEAR UPPER SODA SPRINGS, IN THE MT. SHASTA REGION OF CALIFORNIA.

in the Mt. Shasta region and lies very near the Upper Soda Springs. The observer will say at first glance that it is a waterfall, and such of course it is, and yet not what is commonly implied by the term, for one would search in vain upon the summit of the bluff for the stream which is usually the parent of the waterfall. Waterfalls without apparent source are common in the Shasta region. Their sources, their methods and their beauties are charmingly described by John Muir in one of the later parts of his "Picturesque California" as follows:

"Only a very small portion of the water de-

them, that they give birth to rivers that start on their journey beneath the sun, full grown and perfect without any childhood.

"This flat current, issuing from horizontal seams in the face of the wall of the river gorge, in one unbroken sheet flows in a lacework of plashing, upleaping spray over boulders that are clad in green, silky algæ and water-mosses to meet the smaller part of the river, which takes its rise higher up. Joining the river at right angles to its course, it at once swells its volume to three times its size above the spring. The vivid green of the boulders beneath the

region. Sometimes one hears their sounds long distances. Sometimes he comes upon them almost unawares. Speaking of one in particular, Mr. Muir says: "The Big Spring of the Sacramento is about a mile and a half above Sissons, issuing from the base of a drift-covered hill. It is lined with algæ and mosses, and shaded with alder, willow and thorn bushes, which give it a fine setting. Its waters apparently unaffected by flood or drouth, heat or cold, fall at once into white rapids with a rush and dash as if glad to escape from the darkness to begin their wild course down to the plain."

cessible. Our agriculturists should not allow these resorts to be enjoyed alone by foreign tourists and city campers. The proposed excursion of Californians to attend the meeting of the Oregon State Grange, if carried out, will lead many to acquaintance with the Shasta region. In nearly all parts of the State there are romantic spots which can be easily reached by wagon, to which the family can be taken for a restful outing this summer. Let them all be enjoyed. With a good outfit of team and wagon and camp equipage, a family can cheaply enjoy an excursion, covering many miles of distance.

CORRESPONDENCE.

Florida Notes.

Editors Press: Fair Florida has belied her reputation this year. It has been neither fair nor warm. The winter of '88-89 was made memorable by the "great freeze," but I think even that winter has been surpassed by this, not, of course, in the spurts of severe cold, but in the total aggregate of low temperature. In the five winters we have passed in Florida, we have never before so continuously felt the need of a fire; never have there been so many raw, rainy days, sometimes continuing for a week, during which rain fell more or less every day, and the sun was invisible from beginning to end. It has been a Californian winter—so far as rainfall is concerned—rather than a Floridian. Many of the lakes in Central and South Florida are reported higher than they have been for 18 years; the great Disston sugar plantations, on drained land in the Kissimmee valley, have been much damaged by submergence (we have no freshets or washouts in this level land); and the cattle on South Florida savannas and in the piney "flatwoods" of this section have suffered much for lack of dry sleeping-grounds.

A neighbor who keeps a careful record tells me there have been 26 frosts this winter up to date (Feb. 24th). The enormous amount of rainfall, accompanied by so cool an atmosphere and so many frosts, has been hard on the strawberry plants, especially those that were not in a strong and thrifty condition when winter began. Red leaves, showing the initiatory stages of decay, have been sprinkled thick over some plantations, reminding one of the maple leaves in the North in early autumn. The setback given the plants by the hard weather has caused many patches to be attacked by leaf-rust, which has gained so strong a foothold that, unless the warm weather to which we are fairly entitled soon gives them a decided impetus strong enough to grow out of it, the yield of berries will be seriously curtailed. This rust is thought by Prof. Burrell to be caused by a vegetable fungus which attaches itself to the leaf, its roots radiating in a circle, and feeding on the substance of the leaf until it is destroyed.

Our growers here have tried many remedies, but to little avail. Potash-water, sulphate of potash, cotton-seed meal and other substances have been sprinkled on the leaves with little, if any, effect. This spring, nitrate of soda is being tried by a number, and a few who experimented with it last spring (too late, however, to influence the yield of fruit) give us much encouragement to believe that it will afford a measure of relief. Nitrate of soda is a powerful stimulant; it causes the plants to take on a very rapid growth for a few days, which seems to enable them to grow out of the rust, to overcome it, as it were. The only objection raised against its use by Northern correspondents to whom we have applied for information is, that it induces so rank a growth of the plant as to render the berries soft and unfit for long transportation. At any rate, the fact appears to be tolerably well established that the most effective measure against rust is prevention in the shape of vigorous and continuous growth, to be maintained throughout the winter as much as possible by liberal fertilizing and judicious cultivation.

The fact that rust has so often attacked plants soon after the mulching is applied (this is generally scattered on about Jan. 1st) has caused many growers to believe that this is the cause of the phenomenon. This is probably true only indirectly, in that the mulching suddenly cuts off the sunlight and chills the ground, thereby giving the plants a temporary check, which invites the fungus. Observing growers have noticed that the same conditions, substantially, prevail before the scale attacks orange trees—namely, a check in growth from lack of fertilizer and tillage.

Notwithstanding the repeated frosts this winter, the latest of which occurred yesterday morning, considerable shipments of strawberries have already been made. Monday, the 18th, nearly seven bushels were sent forward by express, mostly to New York. A half-bushel sent to Boston on the 15th, sold readily for \$1.75 per quart; later shipments have brought \$1.50 and \$1.25. Berries can be forwarded by open express without ice as late as April 10th or 15th, when carefully picked and sorted; and your correspondent has successfully shipped this way as late as April 30th, with the thermometer at 90° in the depot; but this is risky.

Heretofore nine-tenths of the Florida berries have gone by steamer from Savannah; this year, arrangements are about completed to give us an all-rail service. This will cost us ten cents a quart (the same as by steamer), and a cart-load, on the basis of 7000 quarts, will cost us \$700. In practice, a refrigerator car seldom starts North with over 6000 quarts, making it cost \$600. The fact that the strawberry men can stand such charges and still make money, speaks well for the business. Your correspondent is familiar with two acres on which last spring a profit of over \$500 per acre was made, clear of all expenses whatsoever.

Last spring about 35 carloads were forwarded from this station. This spring we expect to

ship 75 or 80 carloads, as our acreage is more than doubled. Seventy-five bushels per acre is an average yield for the shipping season, though your correspondent shipped last spring 205 bushels from two acres. We shall have, when the season is fully opened, one, two or three refrigerator cars standing on our spur-track all the while, loading for Chicago and the Eastern cities, as there is going to be a lively competition. This (Bradford) county is the leading one in the strawberry-growing industry; there are about 250 acres in it.

The length of the strawberry season in Florida is remarkable. Last winter your correspondent sold his first berries February 10th; began to ship to the North on the 22d; made his last shipment May 8th, but kept on picking for wine, canning, etc., for a month longer, and his children gleaned enough berries to make a final shortcake July 4th, all from a single variety, the Newman Improved!

This industry has a bright future in Florida. Our berries are considerably earlier than those of Louisiana and Mississippi, and they bear transportation to the far North much better than the fruit grown in the rich alluvial soil of those States. S. POWERS

Lawley, Bradford Co., Fla.

Notes on San Luis Obispo County.

EDITORS PRESS:—San Luis Obispo county has ever ranked with the first dairy counties of the State. In fact, until within the last two or three years little attention was given by the settlers to any industry except stock-raising and dairying. It was not so much because people did not believe the soil and climate well adapted to other branches of agriculture, but chiefly because of the lack of rail communication with the seaboard. This want having, in a measure, been supplied by the S. P. R. R. Co., whose line extends from your city to the new town of San Margaritte, ten miles north of San Luis Obispo City, the rich farming lands of the hitherto isolated interior have attracted many settlers. The Government lands have been pre-empted or homesteaded, and many of the grant-holders have adopted the wise policy of subdividing their holdings and are parceling out the same in tracts to suit home-builders. Substantial towns have sprung up in various parts of the county, where but a "few years ago the rank thistle nodded in the wind, and the wild fox dug his hole unscared."

It is the eastern portion of the county which has undergone the most perceptible change recently. A little more than two years ago, where the thriving town of San Miguel stands, the country was almost a literal waste, used only as a sheep range. Paso Robles was unknown as a town, though the virtue of the springs, for the relief of invalids, had attracted attention. Now it is an incorporated city, claiming a population of over 600. The University Experiment Station, located about two miles northwest, is also a feature of interest connected with this section. It was established over a year ago by Prof. Hilgard, on land generously donated for the purpose, by Hon. J. V. Webster. Much credit is justly accorded the latter for his disinterested efforts in securing the station here. The farm is superintended by Prof. R. D. Cruickshank, and comprises about 20 acres. The improvements now represent a cost of over \$4000, and are being continually augmented. Grain-farming and fruit-growing is attracting much attention. The prospect was never so good as it is this year for a large yield of grain, while the few orchards old enough to bear fruit promise well.

During a sojourn in the county of several weeks, traveling in the interest of the Rural Press, I have made the acquaintance of a number of scientific fruit-growers, all of whom report encouragingly on the prospects of the county for becoming noted eventually as a fine fruit growing region. They do not put any particular stress on its adaptability for the citrus varieties, yet doubtless in certain localities as fine oranges and lemons are produced as anywhere in the State. If any should doubt this, let them visit the orchard of E. Leedham, Arroyo Grande, as I have done, and they will be skeptical no longer. The visitor will be well repaid for his pains to call on this gentleman anyhow, and inspect his numerous varieties of fruits and flowers.

The Arroyo Grande district, 15 miles south of San Luis Obispo City, has for years been rather famous for bean-raising, but latterly it is gaining notoriety for the variety and the excellence of its fruits. With the large increase of population since 1886, many fine young orchards are springing up to adorn the landscape. Nearer San Luis Obispo, where the country has had the advantage of older settlement, fruit-raising has passed the stage of an experiment. One of the best looking orchards I noticed on my trip to Arroyo Grande was that surrounding the residence of Judge Steele. It seemed to represent many varieties, and thrift characterized each tree.

About 12 miles east of Templeton is Creston, which would be deserving of little notice but for the fact of the promising district by which it is surrounded. For miles, extending in nearly all directions, the country is rapidly yielding to the civilizing influence of the plow. The rich soil has already been tested, and its adaptability to grain and fruit growing firmly established. Near this place is situated the model homestead of Hon. J. V. Webster, com-

prising about 1400 acres. Mr. Webster has displayed taste, not only in having made the selection of such a place on which to build a home, but in the admirable arrangement of fields, buildings, orchard, etc. The entire tract is surrounded by a fence of seven barbed wires, besides numerous division fences of like description. Having resided upon the place but four years, the improvements indicate that Mr. Webster has set a proper value upon time. He has a superb residence and a thrifty orchard and vineyard of 30 acres, which is just beginning to bear. I was detained at Mr. Webster's home about a week, on account of the great March storm, but the sting of confinement was much assuaged by free access to a well-stocked library, and by the social qualities of his interesting family. Licorice Farming.

EDITORS PRESS:—In the clipping from the *Woodland Democrat* that you sent me that treated upon the above subject, there are several statements that I do not think are correct.

The people of the United States are perhaps paying from three to five millions of dollars annually in a jobbing way for licorice that could be profitably raised in California and perhaps in other sections of the United States as well, and not near so difficult to raise and perfect the crop as the article in the paper referred to would have us believe.

I have cultivated the plant for the last three years, and my experience teaches me that it is about the hardiest plant and requires less care and fertilizing than almost any other plant; and in order to test its extreme hardihood I have sent a grain-bag full of roots to the superintendent of Golden Gate Park, to be planted in the drifting sand as an experiment; for if it will grow there and do only moderately well, it will be very valuable.

Instead of planting two feet apart, I would plant three to four feet, and instead of 16 inches apart in the rows I would put them two to three feet. Cutting the root slips three to six inches is about right, I should say; but planting them vertically in small holes and the top several inches below the surface, I believe is wrong. And instead of cultivating to the depth of three feet, simple plowing to a foot in depth is quite sufficient, and then planting in a furrow by dropping the cuttings the proper distance apart about six inches deep and covering with a plow or harrow.

I did not find it necessary to dig three feet deep with a spade to harvest the crop, as the great body of the roots were within a foot of the surface and the majority within eight inches.

The article states that "When dug, the side roots used for propagation are cut off, and the main roots are washed, dried and tied in convenient sized bundles."

The side roots are used for propagating, but I have yet to learn that the main or tap root is of value, either in commerce or for propagation.

After a crop is taken off, the cut roots left in the ground will give a good volunteer crop thereafter; in fact, most of the licorice of commerce is grown wild.

Mr. Isaac Lea of Florin, Sacramento county, has had more experience, perhaps, in raising the root for market than any other person in this country. He says that "the best place to grow it is on river-bottoms that are subject to overflow; that the plant is very hardy and will grow anywhere from Maine to Mexico, and will yield 40 to 50 tons of roots per acre where the soil is moist enough to suit it." He has roots for sale in any quantity, but it will soon be too late to plant them unless he has roots laid away.

The bush is much in shape like the currant, and grows to about the same height. It only needs cultivation enough to keep down weeds, while the brush if cut down every fall and scattered broadcast would by spring enrich the soil materially.

I have great faith in the future of this plant in this State, and believe that there are many places where it can be cultivated and harvested by proper implements at a very large profit.

I have only cultivated it out of curiosity, to test its merits, and have no plants for sale. I hope that later on I may secure more proof to substantiate my belief in the great merit of the plant as connected with commerce.

HORTICULTURE.

Pruning Apple Orchards.

EDITORS PRESS:—In passing through Tuolumne county with its numerous apple orchards, your sense of right and wrong is shocked by the way in which many of these fine trees are butchered. They remind one of a poor devil with arms and legs cut off and only the short stumps left to show the man he once was. Vandalism is hardly the proper name to apply to this tree-butcherer. Imagine whole orchards with every limb cut square off three to eight feet from the trunk, the stumps sending out great bunches of suckers, while the stubs of other limbs project from the tree at every angle, only waiting for the coming season to produce additional sucker limbs. The bearing

portion of the limbs, with all its fruit-spurs, is gone, and a glance over or down upon one of these unfortunate orchards recalls a willow bottom—all shoots. Tuolumne is not alone in this, but by reason of the greater number of her apple orchards and the absence of other fruits, it is the more noticeable. It is against this work of destruction that I wish to write. If I can save one lone apple tree from being beheaded, I will be repaid.

First, then, plant your apple trees 40 feet apart, cut the tree back to four feet, select three forks that will balance the tree, and when about eight inches long clip the ends. When these have grown shoots 18 inches long, cut the ends off again. Wrap your tree to keep the sun from heating the sap, causing it to expand, burst the bark from the tree and die, and then cultivate. If you are in doubt whether to prune or not after the tree is headed, give the tree and your purse the benefit of the doubt and don't. If you find that the tree insists on making a great growth of wood and no fruit-spurs, leave it alone until it is well leaved out and then saw through the bark all around the tree, taking care not to go deeper than the wood. This will check the flow of sap and cause the tree to throw out the spurs instead of making an excess of wood, and it can be made a success on any tree that refuses to bear. If the limbs have grown long and rank, the coming season will find them full of spurs, and the weight of apples will bend them down.

"But my orchard is an old one!" says Mr. Cut-and-Kill. Allow me to sympathize with you. I have one of that kind myself; originally it grew and prospered in the hands of its grower. No better orchard in fruits or beauty of trees could be found, but another came into possession and a wood-chopper was turned loose to run amuck among the trees. If a tree had four branches, he cut off one and left a stump a foot long; if the tree had three forks, he made it two; if two, he made it one, and as this did not make as many cords of wood as he desired, he went up higher and every branch was chopped off of the remaining limbs as high as his ax could reach. As a result the trees threw all their sap into the top branches. Then another man with crosscut saw was called in and the top of the tree was sawed off—like the Duke of York's leg—"short!" So I claim in the language of the day to have "been there."

If you think your old orchard needs an overhauling, look it over first. If your trees are 18 to 20 feet apart, take out every other tree; give those left a chance to extend their limbs and root system. If the tree is as thick as brush with suckers, cut them off close up; leave no stubs. If you must take off a limb, take it off clean and smooth up, and after paring the bark smoothly paint the stump, but don't cut off the ends of an apple limb any more than you would your fingers. E. H. SCHAEFFLE.

Murphys, Cal.

The Fruit-Growers' Convention in San Diego.

President Ellwood Cooper of the State Board of Horticulture has issued a call for the 11th State Convention of Fruit Growers, to be held at National City, beginning Tuesday, April 16th.

The San Diego County Horticultural Society, the Chamber of Commerce, the citizens of National City and San Diego, and the members of the State Board of Horticulture cordially invite fruit-growers, shippers, packers, nursery-men and others interested in horticulture and kindred pursuits to be present at the convention and participate in its deliberations. Every effort will be made to insure a large attendance, and it is to be hoped that the meeting will be one of interest and profit to all. All persons having new fruits and inventions of value to horticulturists are requested to exhibit them at this meeting.

There will be papers and essays by various horticulturists. Among those who have been invited to read papers at this time are L. M. Holt, Riverside; Thomas A. Gary, Los Angeles; W. E. Collins, Rev. O. F. Loop, Pomona; Prof. H. C. Ford, Santa Barbara; Prof. Geo. Hermann, Napa; Felix Gullet, Nevada City; Alex. Crow, Los Angeles; Leonard Coates, Napa; Dr. O. B. Chubb, Oange; Col. W. H. Holabird, Claremont; Prof. D. W. Coquille, Los Angeles; Dr. O. H. Congar, Pasadena; Prof. Lorenzo Yates, Santa Barbara; Geo. M. Gray, Chico; Dr. J. H. Pierson, San Bernardino; L. W. Buck, Vacaville; F. C. Miles, Penryn; Geo. Rice of Alhambra, and various others.

The San Diego organizations above mentioned have arranged various excursions to carry all visitors over the motor-roads to the Mexican boundary, to Oxnard, Olay, and to the great Sweetwater dam and lake of 728 acres; also, around the bay of San Diego on the Belt-line railroad and to the Hotel del Coronado.

All fruit-growers are invited to attend. The Southern Pacific and Santa Fe railroad systems will allow return tickets from all points on their lines to San Diego, provided a receipt for the ticket purchased be taken at the starting-point. This will be countersigned by the secretary at the convention and entitle the holder to a return ticket at one-third the regular rate. Persons going from this end of the State should buy tickets only to Los Angeles, and there arrange for the remainder of the trip. The address of welcome will be delivered by Mrs.

Flora M. Kimball of National City. An interesting address is expected from the president of the board. This assembly of horticulturists bids fair to be one of the largest and best ever held in California.

THE FIELD.

The Beet-Sugar Industry.—No. 1.

[Written for the Rural Press by L. NAGEL.]

The culture of the sugar beet and the manufacture of sugar therefrom has assumed vast dimensions in Germany and France and forms a very important part of the national wealth in these countries. But notwithstanding the progress that has been made in Europe in its development, the knowledge and experience resulting from it has not as yet been applied in such a way in California as to make the production of sugar from this source a matter of any great commercial importance. It may therefore be an interesting subject to those who are at present engaged in and also to those contemplating this industry to read in the following lines the description of the methods of culture of beets as they are carried on in the old country. The meteorological conditions in our State, however, are so very different from those across the ocean that these directions would not strictly be adapted to this country, but can serve only as suggestive to those desiring to attempt establishing the culture of the beet.

Growth of the Industry in Germany.

It must, however, not be supposed that this powerful industry, which has assumed such formidable proportions that in 1885 it netted 101,132,758 marks revenue to the German Government, has always existed in its present extent. On the contrary, it had to develop and to grow from a small beginning, as is shown in the following statistics:

In Germany, in 1836, there were 25,301 tons of beets milled; in 1866, 2,535,635 tons; in 1885, 8,918,130 tons.

The production of beet sugar in 1881 amounted to 594,223 tons; in 1885, 1,150,000 tons, showing an increase of nearly 100 per cent within four years!

In France similar conditions prevail. In 1820 the beet-sugar output was 50 tons; in 1836, 50,000 tons; in 1860, 132,650 tons; in 1878, 420,396 tons, at a value of \$54,425,757.

The universal importance of this industry was rather slow in becoming known. Its originators, like other great men, received ridicule at home and were looked upon by many of their countrymen as insane enthusiasts. Large sums of money were lost, factories failed through lack of experience and perfect machinery—the industry itself sometimes even seemed condemned to failure. But there were some few men found who succeeded in keeping it going until the industry proved itself profitable. The farmers tried and tried again, and when it became thoroughly manifest it was earnestly accepted, and the introduction of the crop in the system of rotation rapidly took hold in all sections in which it could be made successful, and those farmers who at first looked suspiciously on the new industry are now quite enthusiastic in favor of it.

Conditions of Success.

The development of the beet depends in the first place upon a good preparation of the soil and its continued and careful maintenance. As to the soil, it has been proven by experience that any good soil that will grow wheat, barley, corn, and has an arable stratum of 15 to 18 inches will be well suited to its growth, but its subsoil should be permeable and thoroughly drained, so that the taproot may not find either hardpan or stagnant water. New ground, however, or that lately cleared of timber, or land that has not been under continued cultivation at least 10 or 15 years, should not be used for the culture of the beet.

Phosphoric acid, potash, nitrogen compounds and lime are especially necessary to the life of the plant. In the old country, the general source of supply of the various nutritive principles for the restoration of those removed by the crops or to provide those required are found in stable manure, nitrates, superphosphates, made from bones and minerals, potash salts, and the scums and refuse from the sugar factories. Of all these substances, that which combines in itself in the highest degree all the elements of plant food, and which is naturally the most economical, is the stable manure produced on the farm. Sugar beets should, however, never be cultivated upon fresh barnyard manure, because this system of culture gives a large yield in weight, but roots so rich in non-sugar matters that they cannot be worked with profit. To enjoy a beneficial result from its use, it should be distributed at least during the autumn preceding the season of planting, that it may have time to decompose in advance; it is even preferable that it be given to a preceding crop. If, however, applied for the beet crop, it is generally more profitable to give half a dressing of stable manure in the fall and supplement with suitable additions of chemical manures in the spring before sowing. Chili saltpeter is mostly used for this purpose; judiciously applied before sowing, it hastens the vegetation of the plant at the start and helps it through the first stages of growth. When it is exhausted, the stable manures by their slow decomposition supply the subsequent

demands of the plant. The use of nitrates, however, after sowing, and especially in the months of August and September, is absolutely bad and may even be characterized as fraudulent. It increases the weight of the beet, it is true, but also unproportionally the percentage of the non-saccharine parts at the expense of the sugar, and retards ripening.

But the beet must ripen to accumulate sugar within. The success of this industry and the production of a first-class article entirely depends upon the tuber being well matured and perfectly ripe. As sugar is formed in grapes, apples, pears and plums in the last stage of ripening, so with the beet. It attains its greatest amount of sugar in the last stage of its growth.

Any use of nitrates should therefore be accompanied by the subsequent application of a corresponding quantity of phosphates, which have a tendency to counteract any prejudicial influence that the nitrates may exert by hastening the maturity of the plant, which would otherwise remain green and increasing its richness in sugar.

A considerable excess of alkaline matter over the quantity demanded by the crop will tend to increase the saline constituents of the juice, reduce the sugar and make its extraction more difficult.

This question of the mineral constituents of the roots and the influence they exert upon the production of sugar and its extraction from the root, is an exceedingly important one and merits careful study. The juice which contains the smallest percentage of mineral and organic impurities will give a larger yield of sugar than juices in which these constituents exist in larger proportion, having the well-known tendency to increase the proportion of molasses obtained at the cost of the yield of crystallized sugar.

This question of manure, however, is not so very important here; while in Europe farmers are put to great expense for fertilizers, in California, with our rich virgin soil, this expense is saved, and will be for a great many years.

Characteristics of a Good Beet.

The selection of seed deserves the greatest attention on the part of the beet-root grower, as the importance of the variety or race of the beet to be grown for sugar cannot be questioned. It is therefore useful to choose those which will at the same time satisfy the demands of the producer and the manufacturer—that is, that will give a large yield to respond to the demands of the former, combined with good quality and high richness in sugar to meet the expectation of the latter. These favorable conditions are found in roots of moderate size more frequently than in larger ones. It is by no means desirable for the manufacturer to have large beets; the rule is, the smaller the beet the richer in sugar, an average weight of $1\frac{1}{2}$ to $1\frac{3}{4}$ pounds being the most favorable.

By growing very closely, the inferiority of the size as compared with that of other races is in great part compensated for; and on the other hand it has been proven by numerous analyses that these races surpass all others not only in saccharine richness, but also in the purity of its juice, which contains less of ashes and salts than that of any other variety; an advantage of very great importance to the manufacturer.

The importance to the manufacturer of having beets rich in sugar is illustrated by the following figures: Two factories, working the product of 1500 acres, or 25,000 tons beets each, the one having beets two per cent richer in sugar will be able to extract about 500 tons more sugar without any considerable additional expense, and is, therefore, benefited to that extent, or a value of about \$40,000.

These small-sized beets have generally a long, tapering form, which is very desirable for our dry climate, and, moreover, they bear leaves of broad surface—another advantage for our country—as they will, if planted close, develop rapidly. Keep the ground cool; prevent evaporation of moisture, and protect the beet against the heat of the summer months, for the plant is more likely to suffer from too high a temperature than from a deficiency of heat. When we finally consider that beets which bear leaves of broad surface are generally more rich in sugar than those having small leaves upon a concentrated top, we must come to the conclusion that this race of beets, long, tapering in form, of medium size, bearing plenty of large leaves, will be particularly suited to the deep alluvial soil of California.

Among the German varieties, we find the Knauer's Improved Imperial, and among the French races the White Improved Vilmoren, that combine these peculiarities, and it is my opinion that these principally should be cultivated here, not excluding, however, experiments with other races. But whichever be the one chosen, the top of the beet should not protrude from the soil more than one-fourth of its total length, as the top contains none or but very little sugar.

Cultivation and Rotation.

Deep plowing is the first condition of a rational culture. This operation should be effected in advance of winter. Subsequent cultivation should not be spared; it brings about a mellowing of the soil, access and change of air and water, destruction of weeds, deep growth of the root, and improves the size and quality of the plant.

Beets do best after well-manured grain crops; they naturally find place in rotation after wheat or barley. In some cases beets have been pro-

duced two years in succession, especially near Magdeburg, in the so-called Magdeburger Borde, a very deep, rich alluvial soil, but this is possible only in exceptional cases.

Immediately after a crop of cereals the ground is stirred up to break the stubble. In the fall, plow as deeply as the nature of the soil will permit to bury the manure say eight or ten inches, and follow this with a subsoil plowing to a depth of eight or ten inches more, so that the ground will be broken up to a depth of 16 inches or deeper, if possible, without displacing the subsoil. Leave the field with the furrows thus exposed during the winter to the beneficial atmospheric influences and to absorb the rains and winter moisture. This subsoiling, so well known to much more than repay the cost of its application, is very important in the culture of this crop that must take its nourishment through the medium of long tap-roots, which should find no obstacle to their development. In the spring, prepare the soil for sowing by means of the roller and harrow, and in order not to lose the accumulated moisture of winter, avoid, so far as possible, plowing again in the spring. The beet needs a great deal of moisture, and in order to make the culture a success in some parts of California, it would appear that the application of irrigation during the summer months would be an absolute necessity. However, attempts have been made in Lombardy (Italy) to hasten its growth by frequent irrigation during the summer, but it was found to be fatal to it, and growers were forced to adopt other means to assure success, and these were principally in deep plowing and stirring up the soil. This admits a more thorough penetration of the long, tapering root in the soil, a more complete contact with the nutritive elements, moisture, insures the plant against variations of existing conditions, and consequently a healthier state, from which must naturally follow a better quality. However, in this matter of preparing the soil, as in all others, it appears that the grower, while following the general principles enunciated, must be guided by his own judgment and the characters of the soil with which he has to deal.

Sowing is generally effected by means of a drill especially designed; but any drill that will deliver the seed regularly and in sufficient quantity will answer every purpose. Planting by drill requires about 20 pounds of seed per acre and even more. Plenty of seed has to be used in order to secure uniformity in the distribution and to obviate the danger and difficulty of having bare spots in the field that cannot be filled up by transplanting, as transplanted beets will not amount to anything in weight.

The best time for sowing in the old country is considered to be the last week in April and the first week in May, but the rule for California should be: Sow as early as possible according to the temperature of your locality, for by early planting the beet gets the start of the weeds.

Concerning the depth to which the seed should be covered in the ground, opinions differ somewhat; but it will naturally follow that much must necessarily depend upon the temperature of the season, the physical condition of the soil and the proportion of moisture. However, it is considered a good rule not to bury the seed under any circumstances more than one to two inches; that at this depth, other things being equal, a higher percentage of the seeds will grow than at any other.

In all of the beet growing districts of Europe the system of planting in rows has been adopted, but in later years the attention and experiments of the progressive men have been directed to the determination of the influence of the distance between the rows, and the beets in the rows upon the yield per acre and the saccharine value of the crops. By various experiments it has been determined that close culture of medium-sized beets is more profitable at the same time to the grower and the manufacturer, for notwithstanding the smaller volume of the beet produced, the weight of the total yield per acre is very much larger than when larger varieties are separated to greater distances. Beets at small distances from each other, closely planted, are richer, of better quality and less exhausting to the soil, for the constituent principles of sugar are entirely derived from atmospheric sources, while the saline matters only are furnished by the soil and are returned to the farm in the refuse of the factory and fed to cattle. It may therefore be justly said that in the culture of this crop, besides the improvement effected in the physical condition of the soil, its chemical character suffers less from this than from other crops. The extent of separation must naturally vary with the character of the soil, but in order to make cultivation by horse-power possible, a distance of not less than 18 inches between the rows should be adopted, separating the roots from 6 to 7 inches in the rows.

(Concluded next week.)

A SALT SYNDICATE. — The formation of a salt trust now seems assured. The Michigan manufacturers met at East Saginaw, Mich., in secret and agreed to enter the combination. The idea is to cut down all works where fuel costs so much that there is only a narrow margin of profit, and the product of each district is to be regulated by the area it can control. The entire salt-producing territory of the country is to be included. The trust is to have a capital of \$25,000,000.

The great Sweetwater dam near San Diego now holds back a body of water 62 feet deep.

POULTRY YARD.

Bantam-Breeding in California.

EDITORS PRESS:—Your constant reader has become much interested in the Bantam discussion now going on in the columns of the *Poultry Monthly*. In the February number Mr. W. B. Hinesdale writes a very good article on the above noted subject.

On this side of our "big ranch" we believe Bantams are the result of many causes, and that any and all these causes affect the Bantam in less or greater degree. First we know it is a difficult task to rear the Asiatic chick to full size when hatched in early or late summer. Experience is fastening the belief upon us that the Asiatic chick is only one of the family so affected.

Heredity comes to us from causes and effects worked long ago, that established characters that we are able to repeat in the likeness and qualities of the parents. Heredity repeats under the same conditions, and when we change those conditions, plants and animals vary in character.

The Bantam has been produced in various climes. We hear of the Bantam in warm China and Japan, in cold and chilly England, and in the even temperature of the Pacific Coast. I believe I am right in claiming a variety of Bantams have been produced on this coast. About 15 years ago there existed on the hills about Mission canyon a number of flocks of fowls, very small in size, large in wing, and generally red in color, with black splashes in hackle and saddle. The origin of these birds is not definitely known, outside of one fact, that they were brought from Old Mexico about 40 years ago on pack animals, and the variety at that time was the game birds of the native Mexicans. A remnant of this Bantam flock still exists; they are decreasing every year for these obvious reasons:

The eggs are no longer fertile to the extent they were ten years ago, probably from the cause of excessive inbreeding. The hens, I am informed, do not lay as many eggs as formerly; the eggs laid are dropped only when the green grass affords these little runts natural green food. The hens incubate early and late in winter and spring, depending on the season. The late rains in many instances sweep away whole broods and the survivors are usually dwarfed by scanty food, chilly nights, lack of animal and green food, etc. These are the causes that have entered into the Bantam in his creation and in his heredity of character. Is this not a suggestive example of why Bantams are small, and is it not plain to the traveler and observer that summer or spring, with green grass and animal life, may be the representative of one theory East? and quite another state of things might and does exist in remote lands, for in California the winter and early spring rains afford us green grass and animal food in bugs and worms. When May comes to us our grasses have dried up and the cut worms are fast disappearing.

I think it is no more than reasonable for the Bantam-breeder to admit the truth of the teachings of Darwin, Temper, Kolliker and others. Kolliker wrote in the year 1872: "Manifold external conditions when they operate on eggs undergoing their normal development on larvae or other early stages of animals, and on the adult forms, have produced in them partly progressive and partly regressive transformations."

This is the Bantam's case, for our experience has made it quite clear that manifold external conditions have produced and do maintain the Bantam in all his pigmy, elegance and beauty. We are then to conclude that our summer has some influence in keeping the Bantam small. With this influence a check against lowering vitality can be effected by the moderate feeding of cooked meat and other food that may insure health without stimulating the growth of bone or frame. The increase of the size of the first specimen or generation is not the danger to be most feared. We have found that a Bantam reared in winter and fed with all the stimulants of the season may be small in itself, and that the offspring from this specimen in many cases will exceed in size the parent.

[We are pleased to have our contributor return to his old place in our columns, in which he did excellent service several years ago.—EDS. PRESS.]

Poultry-Keeping East and West.

EDITORS PRESS:—Will you please ask some of your readers to give their experience in poultry-raising in California, especially as compared with the work in the States east of the Rockies? And I would like to hear from any of our Press family who may have tried the use of incubators.

My Press arrives every Wednesday, and it is the most welcome paper of the week. We work late and early, but we can generally find time to read all the good things about your favored State, and we are all impatiently waiting for the time to come when we can feel able to pack up and be off for the Pacific Slope.

A Substantial Revival.

The Grange revival is substantial. It is not limited to certain localities. It is shaking monopoly even in regions where, for a time, cheaper organizations seemed to be crowding it out. Our founders were wise when they adopted *Esto perpetua* as the motto of the Order. It was not born that speculators could rob an unsuspecting class for a few years and then let it die. Farmers, more than others, need organization; something which shall protect them from swindlers; something which shall improve them mentally, bring them together oftener, increase sociability. All this the Grange has done, besides saving thousands of dollars to husbandmen, and placing laws on the statute-books of our nation and nearly every State which could never have been placed there by disorganized farmers. A student or graduate of a first-class agricultural college is not ashamed to hang up his diploma. The Grange has made these institutions what they are. A farmer is as much higher than the ordinary dry-goods clerk or book-keeper now as the latter were higher than the farmer before he was educated by the Grange. As our cities continue to be overpopulated and men of brains are forced to till the soil, this caste, if we may use such a word in this connection, will improve, and the farmer will rise with the tide of rural immigration. There will always be work for the P. of H. So long as there are farmers, there will be work for this, their pioneer organization.

A Stirring Appeal.

The following address to a local audience, by our earnest Deputy, A. P. Roache, needs but a change or two of names to make it apply in many places; let our readers else where mentally substitute for "Watsonville" and "Pajaro" whatever will fit their own immediate neighborhoods, and take home the lesson and exhortation:

Farmers are often jokingly termed "chronic growlers," "never satisfied," etc. When one considers the countless natural and unnatural causes which work to their disadvantage, the old joke might well be regarded as containing more than a grain of truth. This year, however, all nature seems to have declared a truce. Everything tends to general improvement in this choicest spot on earth, Pajaro valley. Warm and copious rains give fair promise of an abundant harvest. The almost certain completion of a competing railroad, the great sugar-beet industry, the strong probability of a large fruit-cannery in the immediate future and removal of the tax on fruit-trees, vines, etc., are combined factors of prospective wealth enjoyed by few communities.

Then again, there is the revival of Grange interest, National, State and local, Watsonville Grange alone increasing its membership by 23 in the last six weeks.

Now, farmers, in view of all these bounties bestowed upon you, wake up! get up! stand up! and show by your actions that you appreciate your position and possibilities. Help those who would help you. Subscribe to and write for the Rural Press and your own local papers, one, two or three of them, regardless of politics. It will be money well invested. Their interests are your interests, and while assisting their editors to publish a better paper, and to gain the sinews of war, you can, at the same time, help your own cause, county and country.

But don't stop here. "Onward" should ever be your motto, remembering that to stand still is impossible. You must either swim or be swept along by the rushing current. Join your Grange, the only farmers' institution among you that, with its high moral lessons of forbearance, justice and brotherly love, coupled with the soundness of its business principles, is surely and swiftly elevating the American farmer to that high position which is his by right, considering the importance of the industry which he represents, acknowledged to be

the primal producer of all wealth. Join your Grange, then, and be quick about it. Do you not hear their calls for help on all sides, as they wage almost single-handed the terrible battle of right against wrong? Can you stand passively by while this unequal combat, fought as much for you as for themselves, is going on at the very threshold of your homes, and not lend a helping hand? Do you not, every now and then, hear their shout of victory, as, after superhuman efforts, they capture and destroy some worthless idol, corrupt fort or ancient prejudice, letting in the light of day on wickedness and ignorance, and destroying that arrogant assumption that renders one man master and the other slave? Cast aside, then, your listlessness and prejudice, and let not the few fight the battle while the many enjoy the victory, but show yourselves true disciples of Washington, Jefferson and Adams. Pajaro valley does not merely excel in large pumpkins, fine apples and productive land, but possesses a fine crop of intelligent farmers of brain and mind, whose hearts are in the right place, and whose grit and enterprise no one doubts. All that is needed to give them a grand awakening is agitation and an organized union of their forces, yet ever keeping in mind the maxim of Davy Crockett, "Be sure you are right; then go ahead."

Sacramento County Heard From.

MESSRS. EDITORS:—I desire to break the silence that has reigned so long by sending in a short report from this part of the Grange farm. While I have not had an opportunity to do much work as a Grange Lecturer, I have not been idle in reference to the Grange cause, having been honored with a director's office in our Business Association, and also in our Mutual Fire Association which is sought to be established in this county. It has taken a good many days of my time, and for the last two months I have given more thought to considering the interests of these two Grange enterprises than I have to my own affairs; for I realize this fact, that if we would make the Grange what it should be in numbers and influence, a power in our land for good, a power to successfully contend against official and corporate rascality, it is essential that our numbers shall be large, and that they shall be enthusiastically a unit in Grange interests. To this end, it is very essential that all Grange enterprises should be made successful, an honor to our Order and a monument to the business enterprise of the farmers of our land. For this object I am devoting my time and one talent in helping to conduct one and to successfully launch the other one of the two business enterprises inaugurated by the Grangers of Sacramento county and vicinity.

American River.

Saturday, March 23d, I visited American River Grange and found a goodly number of the faithful and progressive members of said Grange present, all ready to begin the labors of the day. At the request of the Worthy Master, I installed two of their officers, made necessary by reason of one being absent on the regular installation day, and the other by reason of one of their officers moving away and another being elected to fill the vacancy. American River Grange has shown good judgment in the selection of officers to guide the Grange ship for this year. They all seem to realize their responsibilities and propose to faithfully perform all their duties.

Improvements.

By action of the Grange at this meeting, they decided to finish the interior of their hall, wainscoting, lining and papering the same. These improvements, when completed, will make their hall one of the Grange attractions of Sacramento county, and a monument to Grange principles and enterprise. To put on the finishing touches, they propose to earn those new rituals by getting up a class of ten or more. So look out, Bro. Dewey; we are coming, I hope a hundred thousand strong.

The generous rains of the past three weeks have given confidence to all business in general, and a certainty to the farmers in particular. In passing through any part of Sacramento county, the growing grain, beautiful flowers and blossoming trees, with all nature, seem to praise God for His goodness to the children of men.

GEO. W. HACK.

Sacramento, March 25.

PAST MASTER WM. JOHNSTON writes us from Courtland that it was impossible for him to go to San Jose, as his wife and Mattie were both sick. Moreover, he lives five miles from the postoffice, and brethren who expect him to visit them, or who desire a speedy answer, should bear this in mind.

Caution by the National Grange.

MESSRS. EDITORS:—On the 21st of February the Patrons' sign of caution appeared in the Northwest to the effect that the Department of Agriculture was buying seed corn which was taken from the cribs, and that seed corn taken from the cribs in that climate would not grow one year in ten. On the same day the Secretary communicated the substance of the caution to the Secretary of Agriculture. Unfortunately the latter referred the letter to one of his subordinates and an unsatisfactory reply was made to this office. To that I made a vigorous reply, addressing the letter to the Secretary and closing it by saying: "By referring the matter to a subordinate, and by his very weak and pointless letter, we are forced to the conclusion that the matter does not command your interest or attention. My orders from my superior officers are, 'Act promptly and energetically.' In obedience to these orders, having failed to get relief or protection from the Department, I am now preparing the 'Patrons' Caution' to be promulgated to the entire Order."

To this the Secretary of Agriculture sent a prompt (in fact dated same day as my letter) and courteous reply, from which I give this extract: "I shall at once countermand the order by telegraph and mail." On February 27th he wired Bro. Brigham as follows: "The order for corn in the Northwest has been revoked.—Norman J. Colman, Sec'y."

We did not care how much corn seed the Department bought, or where. The only point we made was that "worthless corn seed taken from cribs" should not be distributed to the farmers, our sole duty and aim as officials being to save the farmers of the country from the trouble and vexation which would result from the distribution of poor seed.

This is a brief and plain statement of the case. I may add that I was in constant communication with W. M. Brigham and Col. Lipscomb, and these good and true Patrons did not let grass grow under the feet of the Secretary of the National Grange. It was not a pleasant task to any of the three.
